1 Introduction

This specification specifies functionality, API and configuration of the module LIN transceiver driver. It is responsible to handle the LIN transceiver hardware on an ECU.

A LIN bus transceiver is a hardware device. It is the interface between LIN protocol controller and physical LIN bus. On one hand the transmit data stream of a LIN protocol controller is converted into LIN physical layer compliant bus signals. On the other hand LIN bus data streams are converted into protocol controller input signals. A LIN protocol controller is typically a microcontroller implementation.

Most LIN transceivers support power supply control and wakeup via the bus. A lot of different wakeup/sleep and power supply concepts are available on the market.

In addition so called system basis chips (SBC) are available. Beside LIN transceiver functionalities these devices provide additional features, e.g. detection of electrical malfunctions (e.g. short-circuit to dominant level (GND)), power supply control, advanced watchdogs, LIN transceiver, SPI etc.

1.1 Goal of LIN transceiver driver

The target of this document is to specify interfaces and behaviour, which are applicable to most current LIN transceiver hardware implementations.

[SWS_LinTrcv_00042] [The LIN transceiver driver abstracts the applied LIN transceiver hardware and covers hardware independent interfaces to the higher layers. It abstracts also from ECU layout by using APIs of MCAL layer to access LIN transceiver hardware.] (SRS_BSW_00162)

1.2 Explicitly uncovered LIN transceiver functionality

Some LIN bus transceivers offer additional functionality like ECU self test or error detection capability for diagnostics.

ECU self test and error detection are not defined within AUTOSAR and requiring such functionality in general would lock out most currently used transceiver hardware chips. Therefore, features like "ground shift detection", "selective wakeup", "slope control" and others are not supported.

2 Acronyms and abbreviations

Abbreviation	Description
API	Application Program Interface
Channel	A channel is a software exchange medium for data that are defined with the same criteria.
ComM	Communication Manager
Det	Default Error Tracer
Dio/DIO	Digital input output, one of the SPAL SW modules
EcuM	ECU State Manager
ECU	Electronic Control Unit
Frt	Free Running Timer
Gpt	General purpose Timer
ICU	Interrupt Control Unit
ISR	Interrupt Service Routine
LinTrcv	Lin Transceiver Driver
MCAL	Micro Controller Abstraction Layer
n/a	Not applicable
PDU	Protocol Data Unit
SBC	System Basis Chip; a device, which integrates e.g. LIN and/or LIN transceiver, watchdog and power control.
SPAL	Standard Peripheral Abstraction Layer
SW	Software
SPI	Serial Peripheral Interface
SPI Channel	A channel is a software exchange medium for data that are defined with the same criteria: configuration parameters, number of data elements with same size and data pointers (source & destination) or location. See specification of SPI driver for more details.
SPI Job	A job is composed of one or several channels with the same chip select. A job is considered to be atomic and therefore cannot be interrupted. A job has also an assigned priority. See specification of SPI driver for more details.
SPI Sequence	A sequence is a number of consecutive jobs to be transmitted. A sequence depends on a static configuration. See specification of SPI driver for more details.

3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [6] (SWS BSW General), which is also valid for LIN Transceiver Driver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for LIN Transceiver Driver.

4 Constraints and assumptions

4.1 Limitations

The used APIs of underlying drivers like DIO or SPI shall be synchronous. Implementations of underlying drivers, which do not support synchronous behavior, cannot be used together with LIN transceiver driver.

4.2 Applicability to car domains

This driver might be applicable in all car domains using LIN for communication.

5 Dependencies to other modules

Module	Dependencies
LinIf	All LIN transceiver drivers are arranged below LinIf.
ComM	ComM steers LIN transceiver driver communication modes via LinIf. Independent steering of each single LIN transceiver channel is possible.
Det	Det gets development error information from LIN transceiver driver.
Dio	Dio module is used to access LIN transceiver hardware connected via ports.
EcuM	EcuM gets wakeup information from LIN transceiver driver via LinIf.
lcu	Icu module might perform LIN transceiver hardware interrupts.
Spi	Spi module is used to access LIN transceiver hardware connected via Spi

5.1 File structure

5.1.1 Naming convention for transceiver driver implementation

[SWS_LinTrcv_00070] [In case different LIN transceiver hardware implementations are used in one ECU the function names of the different LIN transceiver drivers must be modified such that no two functions with the same names are generated. The names may be extended with a vendor ID or a type ID.] (SRS_BSW_00347)

5.1.2 Code file structure

For details, refer to the section 5.1.6 "Code file structure" of the SWS BSW General [6].

5.1.3 Header file structure

[SWS_LinTrcv_00067] [The include file structure shall be as follows LinTrcv.c shall include Det.h (needed to notify about development errors) if development error detection for the module LinTrcv is enabled. LinTrcv.c shall include Dio.h (DIO APIs needed to access Transceiver pins)

LinTrcv.c shall include Icu.h (if ICU APIs needed to perform LIN transceiver hardware interrupts)

LinTrcv.c shall include Spi.h (if the LIN bus transceiver driver use drivers for Spi to control the LIN bus transceiver hardware)

LinTrcv.c shall include Tm.h (needed for wait states for changing transceiver operation modes)

(SRS BSW 00301, SRS BSW 00409)

[SWS_LinTrcv_00061] [Name of compiler specific header file is Compiler.h. All mappings of not standardized keywords of compiler specific scope shall be placed and organized in this compiler specific type and keyword header.] (SRS_BSW_00361)

6 Requirements Traceability

Requirement	Description	Satisfied by
SRS_BSW_00005	Modules of the μC Abstraction Layer (MCAL) may not have hard coded horizontal interfaces	SWS_LinTrcv_00999
SRS_BSW_00006	The source code of software modules above the µC Abstraction Layer (MCAL) shall not be processor and compiler dependent.	SWS_LinTrcv_00999
SRS_BSW_00007	All Basic SW Modules written in C language shall conform to the MISRA C 2012 Standard.	SWS_LinTrcv_00999
SRS_BSW_00009	All Basic SW Modules shall be documented according to a common standard.	SWS_LinTrcv_00999
SRS_BSW_00010	The memory consumption of all Basic SW Modules shall be documented for a defined configuration for all supported platforms.	SWS_LinTrcv_00999
SRS_BSW_00101	The Basic Software Module shall be able to initialize variables and hardware in a separate initialization function	SWS_LinTrcv_00001
SRS_BSW_00159	All modules of the AUTOSAR Basic Software shall support a tool based configuration	SWS_LinTrcv_00999
SRS_BSW_00161	The AUTOSAR Basic Software shall provide a microcontroller abstraction layer which provides a standardized interface to higher software layers	SWS_LinTrcv_00999
SRS_BSW_00162	The AUTOSAR Basic Software shall provide a hardware abstraction layer	SWS_LinTrcv_00042
SRS_BSW_00164	The Implementation of interrupt service routines shall be done by the Operating System, complex drivers or modules	SWS_LinTrcv_00999
SRS_BSW_00167	All AUTOSAR Basic Software Modules shall provide configuration rules and constraints to enable plausibility checks	SWS_LinTrcv_00999
SRS_BSW_00168	SW components shall be tested by a function defined in a common API in the Basis-SW	SWS_LinTrcv_00999
SRS_BSW_00170	The AUTOSAR SW Components shall provide information about their dependency from faults, signal qualities, driver demands	SWS_LinTrcv_00999
SRS_BSW_00301	All AUTOSAR Basic Software Modules shall only import the necessary information	SWS_LinTrcv_00067

SRS_BSW_00304	All AUTOSAR Basic Software Modules shall use the following data types instead of native C data types	SWS_LinTrcv_00999
SRS_BSW_00305	Data types naming convention	SWS_LinTrcv_00999
SRS_BSW_00306	AUTOSAR Basic Software Modules shall be compiler and platform independent	SWS_LinTrcv_00999
SRS_BSW_00307	Global variables naming convention	SWS_LinTrcv_00999
SRS_BSW_00308	AUTOSAR Basic Software Modules shall not define global data in their header files, but in the C file	SWS_LinTrcv_00999
SRS_BSW_00309	All AUTOSAR Basic Software Modules shall indicate all global data with readonly purposes by explicitly assigning the const keyword	SWS_LinTrcv_00999
SRS_BSW_00310	API naming convention	SWS_LinTrcv_00001, SWS_LinTrcv_00002, SWS_LinTrcv_00005, SWS_LinTrcv_00007, SWS_LinTrcv_00008, SWS_LinTrcv_00012
SRS_BSW_00312	Shared code shall be reentrant	SWS_LinTrcv_00999
SRS_BSW_00321	The version numbers of AUTOSAR Basic Software Modules shall be enumerated according specific rules	SWS_LinTrcv_00999
SRS_BSW_00325	The runtime of interrupt service routines and functions that are running in interrupt context shall be kept short	SWS_LinTrcv_00999
SRS_BSW_00327	Error values naming convention	SWS_LinTrcv_00050
SRS_BSW_00328	All AUTOSAR Basic Software Modules shall avoid the duplication of code	SWS_LinTrcv_00999
SRS_BSW_00330	It shall be allowed to use macros instead of functions where source code is used and runtime is critical	SWS_LinTrcv_00999
SRS_BSW_00331	All Basic Software Modules shall strictly separate error and status information	SWS_LinTrcv_00999
SRS_BSW_00333	For each callback function it shall be specified if it is called from interrupt context or not	SWS_LinTrcv_00999
SRS_BSW_00334	All Basic Software Modules shall provide an XML file that contains the meta data	SWS_LinTrcv_00999
SRS_BSW_00335	Status values naming convention	SWS_LinTrcv_00999
SRS_BSW_00336	Basic SW module shall be able to shutdown	SWS_LinTrcv_00999
SRS_BSW_00341	Module documentation shall contains all needed informations	SWS_LinTrcv_00999
SRS_BSW_00342	It shall be possible to create an AUTOSAR ECU out of modules	SWS_LinTrcv_00999

	documented in the BSW module description template	
SRS BSW 00429	Access to OS is restricted	SWS_LinTrcv_00999
	Modules should have separate main processing functions for read/receive and write/transmit data path	SWS_LinTrcv_00999
SRS_BSW_00433	Main processing functions are only allowed to be called from task bodies provided by the BSW Scheduler	SWS_LinTrcv_00999
SRS_Can_01096	The bus transceiver driver shall provide an API to initialize the driver internally	SWS_LinTrcv_00001
SRS_Can_01097	CAN Bus Transceiver driver API shall be synchronous	SWS_LinTrcv_00001, SWS_LinTrcv_00002, SWS_LinTrcv_00005, SWS_LinTrcv_00007, SWS_LinTrcv_00012
SRS_Can_01098	The bus transceiver driver shall support an API to send the addressed transceiver into its Standby mode	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Can_01099	The bus transceiver driver shall support an API to send the addressed transceiver into its Sleep mode	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Can_01100	The bus transceiver driver shall support an API to send the addressed transceiver into its Normal mode	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Can_01101	The bus transceiver driver shall support an API to read out the current operation mode of the transceiver of a specified bus within the ECU	SWS_LinTrcv_00005
SRS_Can_01103	The bus transceiver driver shall support an API to read out the reason of the last wakeup of a specified bus within the ECU	SWS_LinTrcv_00007
SRS_Can_01115	The bus transceiver driver shall support an API to enable and disable the wakeup notification for each bus separately	SWS_LinTrcv_00999
SRS_Lin_01502	The LIN Interface shall support an API for RX/TX notifications.	SWS_LinTrcv_00999
SRS_Lin_01503	An API shall exist that enables the LIN driver to directly copy up to 8 byte directly from/to the frame buffers.	SWS_LinTrcv_00999
SRS_Lin_01504	The usage of AUTOSAR architecture shall be applicable for LIN master nodes	SWS_LinTrcv_00999
SRS_Lin_01514	The LIN Interface shall inform an upper layer about wake-up events	SWS_LinTrcv_00066
SRS_Lin_01515	The LIN Interface shall provide an API to wake-up a LIN channel cluster	SWS_LinTrcv_00999
SRS_Lin_01522	LIN-SDU shall be copied consistently	SWS_LinTrcv_00999

	for transfer	
		2002
SRS_Lin_01523	There shall be an API call to set the LIN bus to sleep-mode.	SWS_LinTrcv_00999
SRS_Lin_01524	The LIN Driver shall be able to put the LIN hardware to a reduced power operation mode if needed	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Lin_01534	The AUTOSAR LIN Transport Layer shall support half-duplex physical connections.	SWS_LinTrcv_00999
SRS_Lin_01539	The Transport connection properties shall be statically configured.	SWS_LinTrcv_00999
SRS_Lin_01540	The LIN Transport Layer shall provide an API for initialization.	SWS_LinTrcv_00999
SRS_Lin_01544	Errors shall be handled	SWS_LinTrcv_00999
SRS_Lin_01545	The LIN Transport Layer services shall not be operational before initializing the module.	SWS_LinTrcv_00999
SRS_Lin_01546	The LIN Interface shall contain a Schedule Table Handler for LIN master nodes.	SWS_LinTrcv_00999
SRS_Lin_01547	The LIN Driver shall support standard UART and LIN optimized HW	SWS_LinTrcv_00999
SRS_Lin_01549	The LIN Interface needs to use a timer service for scheduling for LIN master nodes	SWS_LinTrcv_00999
SRS_Lin_01551	One LIN Interface shall support one or more LIN Drivers.	SWS_LinTrcv_00999
SRS_Lin_01552	The LIN Driver shall offer a Hardware independent interface.	SWS_LinTrcv_00999
SRS_Lin_01553	The LIN Driver shall fulfill the general SPAL requirements for Basic Software Modules.	SWS_LinTrcv_00999
SRS_Lin_01555	The LIN driver shall have an interface to retrieve transmit / receive notifications.	SWS_LinTrcv_00999
SRS_Lin_01556	One LIN driver shall be able to handle more than one LIN channel	SWS_LinTrcv_00999
SRS_Lin_01558	The LIN Interface shall check for successful data transfer for LIN master nodes	SWS_LinTrcv_00999
SRS_Lin_01560	If a wakeup occurs during transition to sleep-mode, this channel shall go back to the running mode	SWS_LinTrcv_00999
SRS_Lin_01563	The LIN Driver shall provide a notification for wake-up events	SWS_LinTrcv_00066
SRS_Lin_01564	A Schedule Table Manager shall be available for LIN master nodes.	SWS_LinTrcv_00999
SRS_Lin_01566	Transition to sleep-mode shall be handled	SWS_LinTrcv_00002, SWS_LinTrcv_00055

		_
SRS_Lin_01568	The LIN Interface implementation and interface shall be independent from underlying LIN hardware.	SWS_LinTrcv_00999
SRS_Lin_01569	The LIN Interface shall support initialization of each LIN channel separately	SWS_LinTrcv_00999
SRS_Lin_01571	Transmission request service shall be provided	SWS_LinTrcv_00999
SRS_Lin_01572	The LIN Driver shall support the initialization of each LIN channel separately	SWS_LinTrcv_00999
SRS_Lin_01574	It shall be possible to have one instance of the TP for each channel	SWS_LinTrcv_00999
SRS_Lin_01576	The ISO 17987 specifications shall be reused as far as possible	SWS_LinTrcv_00999
SRS_Lin_01577	It shall be compatible to LIN protocol specification	SWS_LinTrcv_00999
SRS_Lin_01579	The AUTOSAR LIN Transport Layer shall be based on the Diagnostic Transport Layer for ISO 17987.	SWS_LinTrcv_00999
SRS_Lin_01580	The LIN Transceiver Driver shall support separate configuration parameters per bus	SWS_LinTrcv_00074, SWS_LinTrcv_00075

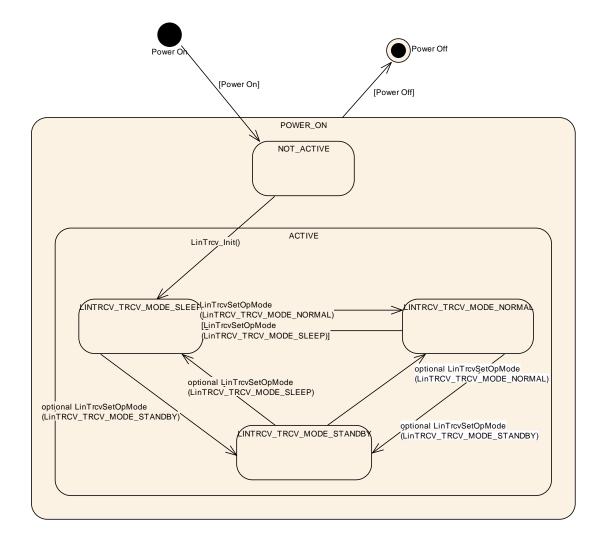

7 Functional specification

7.1 LIN transceiver driver operation modes

[SWS_LinTrcv_00055] [The LIN transceiver driver operation modes are described in the state diagram below.] (SRS_Lin_01566, SRS_Lin_01524, SRS_Can_01098, SRS_Can_01099, SRS_Can_01100)

The main idea behind this diagram is to support the majority of available LIN bus transceivers in a common model view. Depending on the LIN transceiver hardware, the model may have one or two states more than necessary for a given LIN transceiver hardware, but this will clearly decouple the ComM and EcuM from the used hardware.

Lin Transceiver Operation Modes 7-1

Hint: There are several optional interfaces that might not be needed for current LIN transceiver hardware. E.g. the mode "LINTRCV_TRCV_MODE_STANDBY" might be only an internal state that is used for internal hardware transitions. Especially if functionality of "inhibit pin" is used to control the uC only the states "LINTRCV_TRCV_MODE_SLEEP" and "LINTRCV_TRCV_MODE_NORMAL" are of interest.

State	Description
POWER_ON	MCU is fully powered.
NOT_ACTIVE	State of LIN transceiver hardware depend on ECU hardware and on Dio and Port driver configuration. LIN transceiver driver is not initialized and therefore not active.
ACTIVE	The function LinTrcv_Init() was called. It carries LIN transceiver driver to active state. LIN transceiver driver enters state LINTRCV_TRCV_MODE_SLEEP.
LINTRCV_TRCV_MODE_NOR MAL	Full bus communication. If LIN transceiver hardware controls MCU power supply, MCU is fully powered. The LIN transceiver driver detects no further wakeup information.
LINTRCV_TRCV_MODE_STA NDBY	No communication is possible. If LIN transceiver hardware controls MCU power supply, the MCU is still powered. A wakeup by bus or by a local wakeup event is possible. Note: This is an optional state.
LINTRCV_TRCV_MODE_SLEE P	No communication is possible. If LIN transceiver hardware controls MCU power supply, the MCU is not powered. A wakeup by bus or by a local wakeup event is possible.

If a LIN transceiver driver covers more than one LIN channel, all channels are either in state NOT_ACTIVE or in state ACTIVE. In state ACTIVE each channel may be in a different sub state.

7.2 LIN transceiver hardware operation modes

The LIN transceiver hardware may support more mode transitions than the software. The dependencies and the recommended implementations behaviour are explained in this chapter.

It is up to the implementation to decide which LIN transceiver hardware state is covered by which LIN transceiver driver software state. An implementation has to guarantee that whole functionality of described LIN transceiver driver is given by the implementation.

7.3 LIN transceiver wakeup types

There are four different scenarios, which are often called wakeup:

- 1) MCU is not powered, parts of ECU including LIN transceiver hardware are powered. The considered LIN transceiver hardware is in mode LINTRCV_TRCV_MODE_SLEEP. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware causes powering of MCU (e.g. via pin "inhibit"). In terms of AUTOSAR this is kept as a cold start and not as a wakeup.
- 2) MCU is in low power mode, parts of ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode LINTRCV_TRCV_MODE_STANDBY or LINTRCV_TRCV_MODE_SLEEP. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware is informing MCU about wakeup. In terms of AUTOSAR this is kept as a wakeup of the LIN channel and of the MCU.
- 3) MCU is in full power mode, at least parts of the ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode LINTRCV_TRCV_MODE_STANDBY or LINTRCV_TRCV_MODE_SLEEP. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware is informing MCU about wakeup or is polled cyclically for wakeup events. In terms of AUTOSAR this is kept as a wakeup of a LIN channel.
- 4) MCU is in full power mode, at least parts of the ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode LINTRCV_TRCV_MODE_STANDBY or LINTRCV_TRCV_MODE_SLEEP. The MCU is now setting the LIN transceiver hardware to mode LINTRCV_TRCV_MODE_NORMAL and is waking up the LIN channel. In terms of AUTOSAR this is kept as an internal wakeup of a LIN channel (through MCU).

7.4 LIN transceiver wakeup modes

[SWS_LinTrcv_00066] [Wakeup notification must be supported by Lin Transceiver driver, therefore LIN transceiver driver covers 2 wakeup modes, internal wakeup by an upper layer or external wakeup by LIN channel.] (SRS_Lin_01514, SRS_Lin_01563)

- Internal wakeup
 An internal wakeup is initiated by an upper layer, e.g. by calling LinTrcv_Init() or LinTrcv_SetOpMode.
- External wakeup
 Wakeup detected by LIN transceiver driver is forwarded to the upper layer
 through the API LinTrcv_CheckWakeup which has to be called by the LinIf.

Hint: WakeUp through ISR is not supported by the Lin Transceiver Driver but is only possible through ICU.

[SWS_LinTrcv_00074] [Selection of wakeup mode shall be done by configuration parameter LinTrcvWakeUpSupport.] (SRS_Lin_01580)

[SWS_LinTrcv_00075] [Support of wakeup shall be switched on and off for each LIN transceiver channel individually by configuration parameter LinTrcvWakeupByBusUsed.] (SRS_Lin_01580)

[SWS_LinTrcv_00161] [LinTrcv driver shall use the following APIs provided by ICU driver, to enable and disable the wakeup event notification:

- Icu_EnableNotification
- Icu_DisableNotification| ()

[SWS_LinTrcv_00162] [LinTrcv driver shall enable the ICU channels when the transceiver transmits to standby mode (LINTRCV_STANDBY)] ()

[SWS_LinTrcv_00163] [LinTrcv driver shall disable the ICU channels when the transceiver transmits to Normal mode (LINTRCV_NORMAL)| ()

Rationale: LinTrcv driver shall avoid the loss of wakeup events.

7.5 Error classification

7.5.1 Development Errors

[SWS_LinTrcv_00050] [

Type or error	Relevance	Related error code	Value [hex]
API called with wrong parameter for LIN network	Development	LINTRCV_E_INVALID_LIN_NETWORK	0x01
API called with null pointer parameter	Development	LINTRCV_E_PARAM_POINTER	0x02
API service used without initialization	Development	LINTRCV_E_UNINIT	0x11
API service called in wrong transceiver operation mode	Development	LINTRCV_E_TRCV_NOT_SLEEP LINTRCV_E_TRCV_NOT_NORMAL	0x21 0x22
API service called with invalid mode because optional transition is not enabled	Development	LINTRCV_E_INVALID_TRCV_OPMOD E	0x25

J (SRS_BSW_00327, SRS_BSW_00385, SRS_BSW_00386)

7.5.2 Runtime Errors

There are no runtime errors.

7.5.3 Transient Faults

There are no transient faults.

7.6 Error notification

[SWS_LinTrcv_00105] [If development errors are enabled and the state of the LIN Transceiver is NOT_ACTIVE and a function is called except LinTrcv_Init or LinTrcv_GetVersionInfo the corresponding function shall report the development error code LINTRCV_E_UNINIT.] (SRS_BSW_00406)

[SWS_LinTrcv_00106] [If development errors are enabled and any API that uses the parameter "LinNetwork" receives an invalid value for this parameter this function shall report the development error code LINTRCV_E_INVALID_LIN_NETWORK.] ()

[SWS_LinTrcv_00159] [If development errors are enabled and any API that uses a pointer as parameter receives a null pointer as parameter shall report the development error code LINTRCV_E_PARAM_POINTER.| ()

7.7 Preconditions for driver initialization

[SWS_LinTrcv_00099] [The LIN bus transceiver driver might use drivers for Dio or Spi to control the LIN bus transceiver hardware. Thus these drivers must be available and ready to operate before the LIN bus transceiver driver is initialized.] ()

The LIN transceiver driver may have timing requirements for the initialization sequence and the access to the transceiver device, which must be fulfilled by these used underlying drivers.

The timing requirements might be that

The call of the LIN bus transceiver driver initialization has to be performed very early after power up to be able to read all necessary information out of the transceiver hardware in time for all other users within the ECU.

The runtime of the used underlying services is very short and synchronous to enable the driver to keep his own timing requirements limited by the used hardware device. The runtime of the driver may be enlarged, as some hardware devices have the need to have the port pin level valid for e.g. 50µs before changing it again to reach a specific state, e.g. sleep.

7.8 Instance concept

[SWS_LinTrcv_00016] [For each LIN transceiver hardware type an ECU has one LIN transceiver driver instance. One instance serves all LIN transceiver hardware of the same type.] (SRS_BSW_00347, SRS_BSW_00413)

7.9 Wait states

For changing operation modes, the LIN transceiver hardware may have to perform wait states.

[SWS_LinTrcv_00171][The LIN Transceiver Driver shall use the Time service Tm BusyWait1us16bit to realize the wait time for transceiver state changes.] ()

8.2 Type definitions

8.2.1 LinTrcv_ConfigType

[SWS LinTrcv 00172][

TO11.0.	· · —]		
Name	LinTrcv_ConfigType		
Kind	Structure		
Flomente	implementation specific		
Elements	Туре		

	Comment		
Description	Configuration data structure of the LinTrcv module.		
Available via	LinTrcv.h		

J(SRS_BSW_00414)

8.2.2 LinTrcv_TrcvModeType

[SWS_LinTrcv_00168][

TOTAL THE PARTY OF				
Name	LinTrcv_TrcvModeType			
Kind	Enumeration			
	LINTRCV_TRCV_MODE_NORMAL		Transceiver mode NORMAL	
Range	LINTRCV_TRCV_MODE_STANDBY		Transceiver mode STANDBY	
	LINTRCV_TRCV_MODE_SLEEP	Transceiver mode SLEEP		
Description	Operating modes of the LIN Transceiver Driver			
Available via	LinTrcv.h			

(()

8.2.3 LinTrcv_TrcvWakeupModeType

[SWS_LinTrcv_00169][

LOWO_EIIII	/3_EIII1164_00103]			
Name	LinTrcv_TrcvWakeupModeType			
Kind	Enumeration			
	LINTRCV_WUMODE_ ENABLE		The notification for wakeup events is enabled on the addressed network.	
Range	LINTRCV_WUMODE_ DISABLE		The notification for wakeup events is disabled on the addressed network.	
	LINTRCV_WUMODE_ CLEAR		A stored wakeup event is cleared on the addressed network.	
Description	Wake up operating modes of the LIN Transceiver Driver.			
Available via	Lin_GeneralTypes.h			

]()

8.2.4 LinTrcv_TrcvWakeupReasonType

[SWS_LinTrcv_00170][

[OVVO_LIIIII	5_Lin1[cv_00170]			
Name	LinTrcv_TrcvWakeupReasonType			
Kind	Enumeration			
	LINTRCV_WU_ ERROR		Due to an error wake up reason was not detected.	
	LINTRCV_WU_NOT_ SUPPORTED		The transceiver does not support any information for the wake up reason.	
	LINTRCV_WU_BY_ BUS		The transceiver has detected, that the network has caused the wake up of the ECU.	
Range	LINTRCV_WU_BY_ PIN	1	The transceiver has detected a wake-up event at one of the transceiver's pins (not at the LIN bus).	
	LINTRCV_WU_ INTERNALLY	ł	The transceiver has detected, that the network has been woken up by the ECU via a request to NORMAL mode.	
	LINTRCV_WU_RESET	ł	The transceiver has detected, that the wake up is due to an ECU reset.	
	LINTRCV_WU_ POWER_ON	-	The transceiver has detected, that the wake up is due to an ECU reset after power on.	
Description	This type denotes the wake up reason detected by the LIN transceiver in detail.			
Available via	Lin_GeneralTypes.h			

]()

8.3 Function definitions

8.3.1 LinTrcv_Init

[SWS LinTrcv 00001]

Service Name	LinTrcv_Init	
Syntax	<pre>void LinTrcv_Init (const LinTrcv_ConfigType* ConfigPtr)</pre>	
Service ID [hex]	0x00	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	ConfigPtr	Pointer to the selected configuration set.
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Initializes the Lin Transceiver Driver module.	
Available via	LinTrcv.h	

J(SRS_BSW_00310, SRS_BSW_00358, SRS_BSW_00371, SRS_BSW_00414, SRS_BSW_00101, SRS_Can_01096, SRS_Can_01097)

[SWS_LinTrcv_00173][The Configuration pointer configPtr shall always have a NULL_PTR value] (SRS_BSW_00414)

The Configuration pointer configPtr is currently not used and shall therefore be set NULL_PTR value.

[SWS_LinTrcv_00119] [

The function LinTrcv_Init shall set the LIN transceiver hardware to the state LINTRCV_TRCV_MODE_SLEEP.
| ()

Caveats:

The initialization sequence after reset (e.g. power up) is a critical phase for the LIN transceiver driver. The driver will use SPAL functionality (DIO) to access the transceiver hardware. Therefore all necessary BSW drivers must be initialized and usable before.

8.3.2 LinTrcv_SetOpMode

[SWS LinTrcv 00002][

[SWS_LINTEN	[SWS_LinTrcv_00002]				
Service Name	LinTrcv_SetOpMode				
Syntax	<pre>Std_ReturnType LinTrcv_SetOpMode (uint8 LinNetwork, LinTrcv_TrcvModeType OpMode)</pre>				
Service ID [hex]	0x01				
Sync/Async	Synchronous				
Reentrancy	Non Reentrant				
Parameters (in)	LinNetwork	LIN network to wich API call has to be applied			
	OpMode	The parameter says to which operation mode the change shall be performed.			
Parameters (inout)	None				
Parameters (out)	None				
Return value	Std ReturnType	E_OK: will be returned if the transceiver state has been changed to the requested mode. E_NOT_OK: will be returned if the transceiver state change is not accepted or has failed or the parameter is out of the allowed range.			
Description	The internal state of the LIN transceiver driver is switched to mode given in the parameter OpMode.				
Available via	LinTrcv.h				

J(SRS_BSW_00310, SRS_BSW_00357, SRS_BSW_00369, SRS_BSW_00371, SRS_BSW_00406, SRS_Lin_01566, SRS_Lin_01524, SRS_Can_01097, SRS_Can_01098, SRS_Can_01099, SRS_Can_01100)

[SWS_LinTrcv_00108] [The function LinTrcv_SetOpMode shall switch the internal state of channel LinNetwork to the value of the parameter OpMode which can be LINTRCV_TRCV_MODE_NORMAL, LINTRCV_TRCV_MODE_STANDBY or LINTRCV_TRCV_MODE_SLEEP.] ()

[SWS_LinTrcv_00109] [

The function LinTrcv_SetOpMode shall switch the internal state of channel LinNetwork to the value of LINTRCV_TRCV_MODE_STANDBY if one of the follwing conditions is fullfilled:

a) the channel LinNetwork is in mode LINTRCV_TRCV_MODE_SLEEP and the optional transition from this mode to LINTRCV_TRCV_MODE_STANDBY is enabled.

b) the channel LinNetwork is in mode LINTRCV_TRCV_MODE_NORMAL and the optional transition from this mode to LINTRCV_TRCV_MODE_STANDBY is enabled. | ()

[SWS_LinTrcv_00110] [

The function LinTrcv_SetOpMode shall switch the internal state of channel LinNetwork to the value of LINTRCV_TRCV_MODE_SLEEP if one of the follwing conditions is fullfilled:

- a) the channel LinNetwork is in mode LINTRCV TRCV MODE NORMAL
- b) the channel LinNetwork is in mode LINTRCV_TRCV_MODE_STANDBY and the optional transition from this mode to LINTRCV_TRCV_MODE_SLEEP is enabled. | ()

[SWS_LinTrcv_00147] [

The function LinTrcv_SetOpMode shall switch the internal state of channel LinNetwork to the value of LINTRCV_TRCV_MODE_NORMAL if one of the following conditions is fullfilled:

- a) the channel LinNetwork is in mode LINTRCV_TRCV_MODE_SLEEP
- b) the channel LinNetwork is in mode LINTRCV_TRCV_MODE_STANDBY and the optional transition from this mode to LINTRCV_TRCV_MODE_NORMAL is enabled. | ()

[SWS_LinTrcv_00111] [This API is applicable to each transceiver with each value for parameter LinTrcv_SetOpMode regardless of whether the transceiver hardware supports these modes or not. This is to simplify the view of the LinIf to the assigned bus.] ()

[SWS_LinTrcv_00112] [If the requested mode is not supported by the underlying transceiver hardware, the function LinTrcv_SetOpMode shall return E_NOT_OK.] ()

[SWS_LinTrcv_00113] [If there is no/incorrect communication to the transceiver, the function $LinTrcv_SetOpMode$ shall return $E_NOT_OK.$] ()

[SWS_LinTrcv_00114] [If development error detection for the module LinTrcv is enabled:

If the function LinTrcv_SetOpMode is called with OpMode ==
LINTRCV_TRCV_MODE_STANDBY and the channel LinNetwork is in mode
LINTRCV_SLEEP but the optional transition from LINTRCV_SLEEP to
LINTRCV_STANDBY is not enabled, the function LinTrcv_SetOpMode shall report
the development error LINTRCV_E_INVALID_TRCV_OPMODE.] ()

[SWS_LinTrcv_00148] [If development error detection for the module LinTrcv is enabled:

If the function LinTrcv_SetOpMode is called with OpMode ==
LINTRCV_TRCV_MODE_STANDBY and the channel LinNetwork is in mode
LINTRCV_NORMAL but the optional transition from LINTRCV_NORMAL to
LINTRCV_STANDBY is not enabled, the function LinTrcv_SetOpMode shall report
the development error LINTRCV E INVALID TRCV OPMODE.] ()

[SWS_LinTrcv_00115] [If development error detection for the module LinTrcv is enabled:

If optional transition from LINTRCV_STANDBY to LINTRCV_SLEEP is not enabled and the function LinTrcv_SetOpMode is called with OpMode == LINTRCV_TRCV_MODE_SLEEP and the channel LinNetwork is not in mode LINTRCV_TRCV_MODE_NORMAL, the function LinTrcv_SetOpMode shall report the development error LINTRCV_E_TRCV_NOT_NORMAL.] ()

[SWS_LinTrcv_00149] [If development error detection for the module LinTrcv is enabled:

If optional transition from LINTRCV_STANDBY to LINTRCV_NORMAL is not enabled and the function LinTrcv_SetOpMode is called with OpMode == LINTRCV_TRCV_MODE_NORMAL and the channel LinNetwork is not in mode LINTRCV_TRCV_MODE_SLEEP, the function LinTrcv_SetOpMode shall report the development error LINTRCV_E_TRCV_NOT_SLEEP.] ()

[SWS_LinTrcv_00116] [If development error detection for the module LinTrcv is enabled:

If called before the LinTrcv module has been initialized, the function LinTrcv_SetOpMode shall report the development error LINTRCV_E_UNINIT.] ()

[SWS_LinTrcv_00117] [If development error detection for the module LinTrcv is enabled:

If called with an invalid network number LinNetwork, the function LinTrcv_SetOpMode shall report the development error LINTRCV E INVALID LIN NETWORK.] ()

[SWS_LinTrcv_00157] [A mode request of the current mode is allowed and shall not lead to an error even if DET is enabled.] ()

8.3.3 LinTrcv_GetOpMode

[SWS_LinTrcv_00005][

Service Name	LinTrcv_GetOpMode		
Syntax	<pre>Std_ReturnType LinTrcv_GetOpMode (uint8 LinNetwork, LinTrcv_TrcvModeType* OpMode)</pre>		
Service ID [hex]	0x02		
Sync/Async	Synchronous		
Reentrancy	Reentrant		
Parameters (in)	LinNetwork	LIN network to which API call has to be applied	
Parameters (inout)	None		
Parameters (out)	OpMode	Pointer to operation mode of the bus the API is applied to.	
Return value	Std_Return- Type	E_OK: will be returned if the operation mode is detected E_NOT_OK: will be returned, if service request is failed due to development errors or the operation mode is not detected.	
Description	API detects the actual software state of LIN transceiver driver.		
Available via	LinTrcv.h		

J(SRS_BSW_00310, SRS_BSW_00369, SRS_BSW_00371, SRS_BSW_00377, SRS_Can_01097, SRS_Can_01101)

[SWS_LinTrcv_00121] [The function LinTrcv_GetOpMode shall return the actual state of the LIN transceiver driver in the parameter OpMode.] ()
[SWS_LinTrcv_00122] [If there is no/incorrect communication to the transceiver, the function LinTrcv_GetOpMode shall return E_NOT_OK.] ()

[SWS_LinTrcv_00123] [If development error detection for the module LinTrcv is enabled:

If called before the LinTrcv module has been initialized, the function LinTrcv_GetOpMode shall report the development error LINTRCV_E_UNINIT.] ()

[SWS_LinTrcv_00124] [If development error detection for the module LinTrcv is enabled:

If called with an invalid network number LinNetwork, the function LinTrcv_GetOpMode shall report the development error LINTRCV E INVALID LIN NETWORK.] ()

[SWS_LinTrcv_00125] [If development error detection for the module LinTrcv is enabled:

If called with OpMode == NULL, the function LinTrcv_GetOpMode shall report the development error LINTRCV_E_PARAM_POINTER.] ()

Configuration:

The number of supported busses is statically set in the configuration phase.

8.3.4 LinTrcv_GetBusWuReason

[SWS_LinTrcv_00007][

Service Name	LinTrcv_GetBusWuReason		
Syntax	<pre>Std_ReturnType LinTrcv_GetBusWuReason (uint8 LinNetwork, LinTrcv_TrcvWakeupReasonType* Reason)</pre>		
Service ID [hex]	0x03		
Sync/Async	Synchronous		
Reentrancy	Reentrant		
Parameters (in)	LinNetwork	LIN network to which API call has to be applied	
Parameters (inout)	None		
Parameters (out)	Reason	Pointer to wakeup reason of the bus the API is applied to.	
Return value	Std_Return- Type	E_OK: will be returned if the wake up reason is detected E_NOT_OK: will be returned, if service request is failed due to development errors or the wakeup reason is not detected.	
Description	This API provides the reason for the wakeup that the LIN transceiver has detected in the parameter "Reason". The ability to detect and differentiate the possible wakeup reasons depends strongly on the LIN transceiver hardware.		
Available via	LinTrcv.h		

J(SRS_BSW_00310, SRS_BSW_00369, SRS_BSW_00371, SRS_BSW_00377, SRS_BSW_00406, SRS_Can_01097, SRS_Can_01103)

[SWS_LinTrcv_00126] [The function $LinTrcv_GetBusWuReason$ shall return the reason for the wake up that the LIN transceiver has detected in the parameter Reason] ()

[SWS_LinTrcv_00127] [If there is no/incorrect communication to the transceiver, the function $LinTrcv_GetBusWuReason$ shall return $E_NOT_OK.]$ ()

[SWS_LinTrcv_00128] [If development error detection for the module LinTrcv is enabled:

If called before the LinTrcv module has been initialized, the function LinTrcv_GetBusWuReason shall report development error LINTRCV_E_UNINIT. | ()

[SWS_LinTrcv_00129] [If development error detection for the module LinTrcv is enabled:

If called with an invalid network number LinNetwork, the function LinTrcv_GetBusWuReason shall report development error LINTRCV_E_INVALID_LIN_NETWORK.] ()

[SWS_LinTrcv_00130] [If development error detection for the module LinTrcv is enabled:

If called with Reason == NULL, the function LinTrcv_GetBusWuReason shall report the development error LINTRCV E PARAM POINTER.] ()

Configuration:

The number of supported busses is statically set in the configuration phase.

Caveats:

Be aware that if more than one bus is available each bus may report a different wakeup reason. E.g. if an ECU has LIN, a wakeup by LIN may occur and the incoming data may cause an internal wakeup for another LIN bus.

The LIN transceiver driver has a "per bus" view and does not vote the more important reason or sequence internally. The same may be true if e.g. one transceiver controls the power supply and the other is just powered or un-powered.

8.3.5 LinTrcv_GetVersionInfo

[SWS_LinTrcv_00008][

Service Name	LinTrcv_GetVersionInfo
Syntax	<pre>void LinTrcv_GetVersionInfo (Std_VersionInfoType* versioninfo)</pre>
Service ID [hex]	0x04
Sync/Async	Synchronous
Reentrancy	Reentrant
Parameters (in)	None
Parameters (inout)	None

Parameters (out)	versioninfo	Pointer to version information of this module.
Return value	None	
Description	This service provides the version information of this module through the parameter "versioninfo".	
Available via	LinTrcv.h	

J(SRS_BSW_00310, SRS_BSW_00369, SRS_BSW_00371, SRS_BSW_00406, SRS_BSW_00407)

[SWS_LinTrcv_00131] [The function LinTrcv_GetVersionInfo shall return the version information of this module. The version information contains all data defined in Std_VersionInfoType in "AUTOSAR SWS StandardTypes".| ()

[SWS_LinTrcv_00134] [If development error detection for the module LinTrcv is enabled:

If called with VersionInfo == NULL, the function LinTrcv_GetVersionInfo shall
report development error LINTRCV E PARAM POINTER. ()

8.3.6 LinTrcv_CheckWakeup

[SWS_LinTrcv_00012][

Service Name	LinTrcv_CheckW	akeup		
Syntax	<pre>Std_ReturnType LinTrcv_CheckWakeup (uint8 LinNetwork)</pre>			
Service ID [hex]	0x07			
Sync/Async	Synchronous			
Reentrancy	Reentrant			
Parameters (in)	LinNetwork	LinNetwork LIN network to which API call has to be applied.		
Parameters (inout)	None			
Parameters (out)	None			
Return value	Std_Return- Type E_OK: Will be returned, if a wakeup has been detected. E_NOT_OK: Will be returned, if no wakeup has been detected.			
Description	Notifies the calling function if a wakeup is detected.			
Available via	LinTrcv.h			

J(SRS_BSW_00310, SRS_BSW_00369, SRS_BSW_00371, SRS_BSW_00375, SRS_BSW_00406, SRS_Can_01097)

[SWS_LinTrcv_00144] [If development error detection for the module LinTrcv is enabled:

If called before the LinTrcv module has been initialized, the function LinTrcv_CheckWakeup shall report the development error LINTRCV_E_UNINIT. | ()

[SWS_LinTrcv_00145] [If development error detection for the module LinTrcv is enabled:

If called with an invalid network number LinNetwork, the function LinTrcv_CheckWakeup shall report the development error LINTRCV E INVALID LIN NETWORK. ()

[SWS_LinTrcv_00166][The function LinTrcv_CheckWakeup shall evaluate the wakeup on the addressed LIN network. When a wake-up event on the addressed LIN network is detected (e.g. dominant bus state or negative edge at wakeup pin), the function LinTrcv_CheckWakeup shall notify the ECU State Manager module immediately via the EcuM_SetWakeupEvent and LinIf via LinIf_WakeupConfirmation callback function.] ()

[SWS_LinTrcv_00167][If development error detection for the module LinTrcv is enabled: If the addressed LIN network is not in mode LINTRCV_TRCV_MODE_SLEEP, the function LinTrcv_CheckWakeup shall report the development error LINTRCV_E_TRCV_NOT_SLEEP.| ()

Configuration:

See configuration parameter LinTrcvWakeUpSupport.

8.3.7 LinTrcv SetWakeupMode

[SWS_LinTrcv_00009][

Service Name	LinTrcv_SetWa	LinTrcv_SetWakeupMode		
Syntax	<pre>Std_ReturnType LinTrcv_SetWakeupMode (uint8 LINNetwork, LinTrcv_TrcvWakeupModeType TrcvWakupMode)</pre>			
Service ID [hex]	0x05			
Sync/Async	Synchronous			
Reentrancy	non Reentrant			
Paramatara	LINNetwork LIN network to which API call has to be applied			
Parameters (in)	TrcvWakup Mode	Requested transceiver wakup reason.		

Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_Return- Type	E_OKwill be returned if the transceiver state has been changed to the requested mode. E_NOT_OK will be returned, if service request is failed due to development errors or the wakeup mode is not set.
Description	This API enables, disables and clears the notification for wakeup events on the addressed network.	
Available via	LinTrcv.h	

(()

[SWS_LinTrcv_00135] [Enabled: If the function LinTrcv_SetWakeupMode is called with TrcvWakeupMode == LINTRCV_WUMODE_ENABLE and if the LinTrcv module has a stored wakeup event pending for the addressed bus, the LinTrcv module shall execute the notification within the API call or immediately after (depending on the implementation).] ()

[SWS_LinTrcv_00136] [Disabled: If the function LinTrcv_SetWakeupMode is called with TrcvWakeupMode == LINTRCV_WUMODE_DISABLE, then the notifications for wakeup events are disabled on the addressed network. It is required by the transceiver device and the underlying communication driver to detect the wakeup events and store it internally in order to raise the event when the wakeup notification is enabled again.] ()

[SWS_LinTrcv_00137] [Clear: If the function LinTrcv_SetWakeupMode is called with TrcvWakeupMode == LINTRCV_WUMODE_CLEAR, then a stored wakeup event is cleared on the addressed network. Clearing of wakeup events have to be used when the wake up notification is disabled to clear all stored wake up events under control of the higher layer.] ()

[SWS_LinTrcv_00138] [If there is no/incorrect communication to the transceiver, the function LinTrcv SetWakeupMode shall return E NOT OK.] ()

[SWS_LinTrcv_00139] [If development error detection for the module LinTrcv is enabled:

If called before the LinTrcv has been initialized, the function LinTrcv_SetWakeupMode shall report development error LINTRCV_E_UNINIT.] ()

[SWS_LinTrcv_00140] [If development error detection for the module LinTrcv is enabled:

If called with an invalid network number LinNetwork, the function LinTrcv_SetWakeupMode shall report development error LINTRCV_E_INVALID_LIN_NETWORK.] ()

8.4 Scheduled functions

This chapter lists all functions provided by the LinTrcv module and called directly by the Basic Software Module Scheduler. There are no cyclical called functions provided by Lin Transceiver Driver.

8.5 Call-back notifications

There are no callback notifications provided by Lin Transceiver Driver.

8.6 Expected Interfaces

In this chapter all interfaces required from other modules are listed.

8.6.1 Mandatory Interfaces

This chapter defines all interfaces which are required to fulfill the core functionality of the module.

[SWS LinTrcv 91002][

API Function	Header File	Description
LinIf_Wakeup- Confirmation	Linlf.h	The LIN Driver or LIN Transceiver Driver will call this function to report the wake up source after the successful wakeup detection during CheckWakeup or after power on by bus.

]()

8.6.2 Optional Interfaces

This chapter defines all interfaces which are required to fulfill an optional functionality of the module.

[SWS_LinTrcv_91003][

API Function	Header File	Description
Det_ReportError	Det.h	Service to report development errors.
Dio_ReadChannel	Dio.h	Returns the value of the specified DIO channel.
Dio_Read- ChannelGroup	Dio.h	This Service reads a subset of the adjoining bits of a port.
Dio_ReadPort	Dio.h	Returns the level of all channels of that port.
Dio_WriteChannel	Dio.h	Service to set a level of a channel.

Dio_WriteChannel- Group	Dio.h	Service to set a subset of the adjoining bits of a port to a specified level.
Dio_WritePort	Dio.h	Service to set a value of the port.
EcuM_Set- WakeupEvent	EcuM.h	Sets the wakeup event.
Icu_Disable- Notification	lcu.h	This function disables the notification of a channel.
Icu_Enable- Notification	lcu.h	This function enables the notification on the given channel.
Spi_GetStatus	Spi.h	Service returns the SPI Handler/Driver software module status.
Spi_ReadIB	Spi.h	Service for reading synchronously one or more data from an IB SPI Handler/Driver Channel specified by parameter.
Spi_SetupEB	Spi.h	Service to setup the buffers and the length of data for the EB SPI Handler/Driver Channel specified.
Spi_SyncTransmit	Spi.h	Service to transmit data on the SPI bus
Spi_WriteIB	Spi.h	Service for writing one or more data to an IB SPI Handler/Driver Channel specified by parameter.
Tm_Busy- Wait1us16bit	Tm.h	Performs busy waiting by polling with a guaranteed minimum waiting time.

]()
[SWS_LinTrcv_00165] [LinTrcv driver shall enable/disable ICU channels only if reference is configured for the parameter LinTrcvIcuChannelRef.] ()

8.6.3 Configurable interfaces

There are no configurable interfaces for LIN transceiver driver.

9 Sequence diagrams

For all wakeup related sequence diagrams please refer to chapter 9 of ECU State Manager.

10 Configuration specification

In general this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals.

Chapter 10.2 specifies the structure (containers) and the parameters of the module LinTrov.

Chapter 10.3 specifies published information of the module LinTrcv.

10.1 How to read this chapter

For details refer to the chapter 10.1 "Introduction to configuration specification" in SWS_BSWGeneral.

[SWS_LinTrcv_00174] [The LIN Transceiver Driver module shall reject configurations with partition mappings which are not supported by the implementation.]()

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters are described in preceding chapters.

10.2.1 Variants

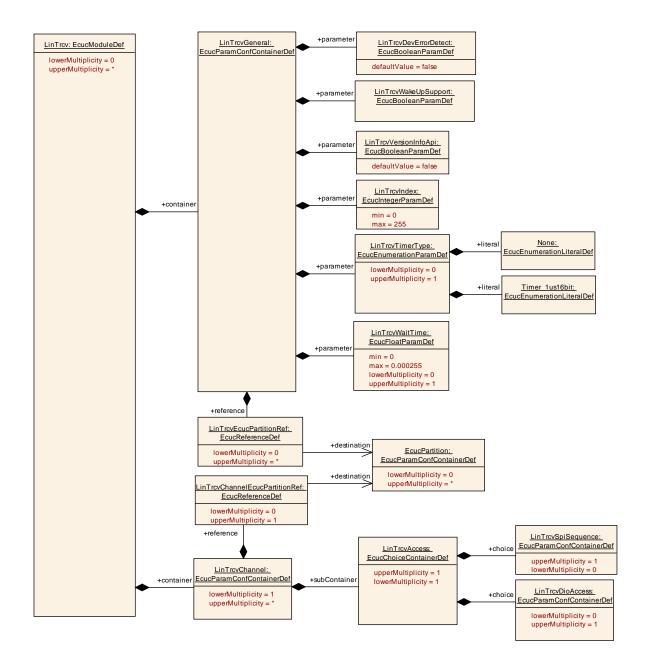

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapters 7 and Chapter 8.

10.2.2 LinTrcv

SWS Item	ECUC_LinTrcv_00161:
Module Name	LinTrcv
Module Description	Configuration of LIN Transceiver Driver module
Post-Build Variant Support	false
Supported Config Variants	VARIANT-PRE-COMPILE

Included Containers		
Container Name	Multiplicity	Scope / Dependency
LinTrcvChannel	1*	Container gives LIN transceiver driver information about a single LIN transceiver channel. Any LIN transceiver driver has such LIN transceiver channels.
LinTrcvGeneral	1	Container gives LIN transceiver driver basic information.

10.2.3 LinTrcvGeneral

SWS Item	ECUC_LinTrcv_00090:
Container Name	LinTrcvGeneral
Parent Container	LinTrcv
Description	Container gives LIN transceiver driver basic information.
Configuration Parameters	

SWS Item	ECUC_LinTrcv_00001:	
Name	LinTrcvDevErrorDetect	
Parent Container	LinTrcvGeneral	
Description	Switches the development error detection and notification on or off.

Scope / Dependency	scope: ECU		

No Included Containers

[SWS_LinTrcv_00175] [The module will operate as an independent instance in each of the partitions, means the called API will only target the partition it is called in.]()

10.2.4 LinTrcvChannel

SWS Item	ECUC_LinTrcv_00091:
Container Name	LinTrcvChannel
Parent Container	LinTrcv
Description	Container gives LIN transceiver driver information about a single LIN transceiver channel. Any LIN transceiver driver has such LIN transceiver channels.
Configuration Parameters	

SWS Item	ECUC_LinTrcv_00011:				
Name	LinTrcvChannelld				
Parent Container	LinTrcvChannel				
Description	Unique identifier of the LIN 7	ransc	eiver Channel.		
Multiplicity	1	1			
Type	EcucIntegerParamDef (Symbolic Name generated for this parameter)				
Range	0 255	0 255			
Default value					
Post-Build Variant Value	false				
Value Configuration Class	Pre-compile time	Χ	All Variants		
	Link time				
	Post-build time				
Scope / Dependency	scope: local				

SWS Item	ECUC_LinTrcv_00004:				
Name	LinTrcvChannelUsed				
Parent Container	LinTrcvChannel	LinTrcvChannel			
Description	Shall the related LIN transceiver channel be used?				
	True: Is used				
	False Is not used				
Multiplicity	1	1

	Post-build time		
Scope / Dependency	scope: ECU		
•	dependency: LinTrcvWakeupByBusUsed		

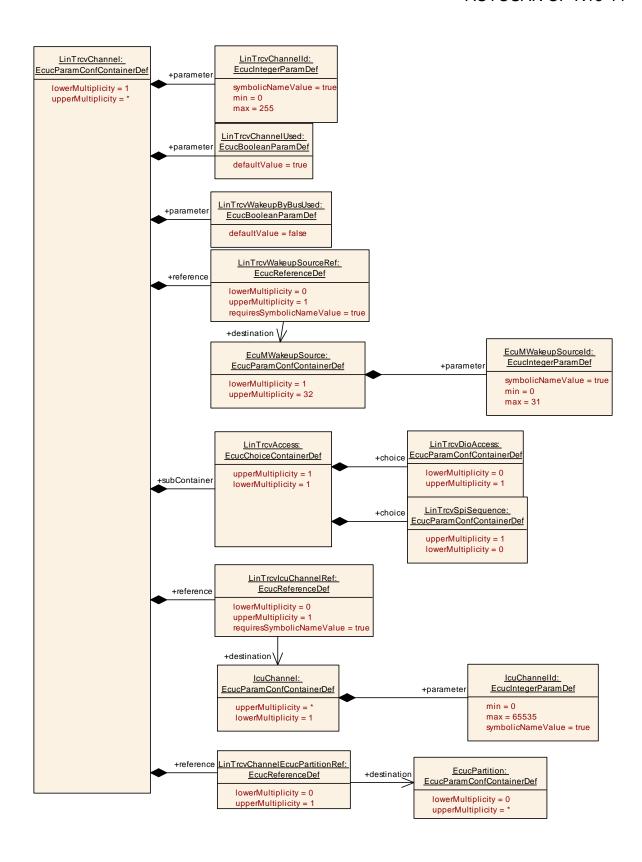

Included Containers		
Container Name	Multiplicity	Scope / Dependency
LinTrcvAccess		Container gives LIN transceiver driver access about a single LIN transceiver channel.

[SWS_LinTrcv_00176] [The ECUC partitions referenced by LinTrcvChannelEcucPartitionRef shall be a subset of the ECUC partitions referenced by LinTrcvEcucPartitionRef .()

[SWS_LinTrcv_00178] [If LinTrcvEcucPartitionRef references one or more ECUC partitions, LinTrcvChannelEcucPartitionRef shall have a multiplicity of one and reference one of these ECUC partitions as well.]()

[SWS_LinTrcv_00177] [LinTrcvChannel and LinChannel of one communication channel shall all reference the same ECUC partition.]()

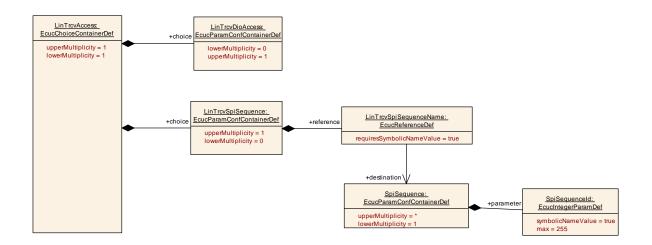

10.2.5 LinTrcvAccess

SWS Item	ECUC_LinTrcv_00154 :
Choice container Name	LinTrcvAccess
Parent Container	LinTrcvChannel
Description	Container gives LIN transceiver driver access about a single LIN

transceive	r channal
li ai isceive	ı cılalılıcı.

Container Choices		
Container Name	Multiplicity	Scope / Dependency
LinTrcvDioAccess	01	Container gives LIN transceiver driver information about accessing ports and port pins. In addition relation between LIN transceiver hardware pin names and Dio port access information is given. If a LIN transceiver hardware has no Dio interface, there is no instance of this container.
LinTrcvSpiSequence	01	Container gives LIN transceiver driver information about one SPI sequence. One SPI sequence used by LIN transceiver driver is in exclusive use for it. No other driver is allowed to access this sequence. LIN transceiver driver may use one sequence to access n LIN transceiver hardwares chips of the same type or n sequences are used to access one single LIN transceiver hardware chip. If a LIN transceiver hardware has no SPI interface, there is no instance of this container.

10.2.6 LinTrcvDioAccess

SWS Item	ECUC_LinTrcv_00094:
Container Name	LinTrcvDioAccess
Parent Container	LinTrcvAccess
Description	Container gives LIN transceiver driver information about accessing ports and port pins. In addition relation between LIN transceiver hardware pin names and Dio port access information is given. If a LIN transceiver hardware has no Dio interface, there is no instance of this container.
Configuration Parameters	

Included Containers		
Container Name	Multiplicity	Scope / Dependency
LinTrcvDioChannelAccess	1 1"	Container gives DIO channel access by single Lin transceiver channel.

10.2.7 LinTrcvDioChannelAccess

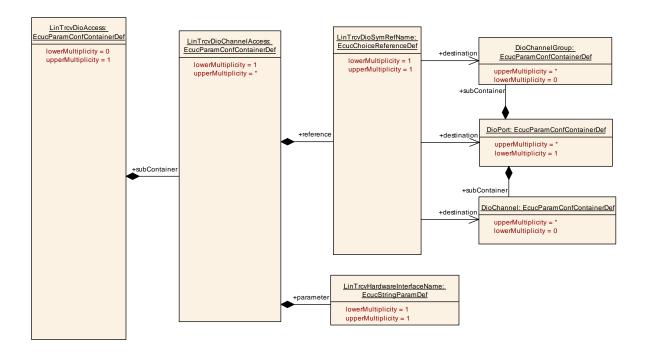

SWS Item	ECUC_LinTrcv_00158:
Container Name	LinTrcvDioChannelAccess
Parent Container	LinTrcvDioAccess
Description	Container gives DIO channel access by single Lin transceiver channel.
Configuration Parameters	

SWS Item	ECUC_LinTrcv_00009:			
Name	LinTrcvHardwareInterfaceName			
Parent Container	LinTrcvDioChannelAccess			
Description	LIN transceiver hardware interface name. It is typically the name of a pin. From a Dio point of view it is either a port, a single channel or a channel group. Depending on this fact either LINTRCV_DIO_PORT_SYMBOLIC_NAME or LINTRCV_DIO_CHANNEL_SYMBOLIC_NAME or LINTRCV_DIO_CHANNEL_GROUP_SYMBOLIC_NAME shall reference a Dio configuration. The LIN transceiver driver implementation description shall list up this name for the appropriate LIN transceiver hardware.			
Multiplicity	1			
Туре	EcucStringParamDef			
Default value

Scope / Dependency	scope: local			

SWS Item	ECUC_LinTrcv_00102:			
Name	LinTrcvDioSymRefName			
Parent Container	LinTrcvDioChannelAccess			
Description	Choice Reference to a DIO Port, DIO Channel or DIO Channel Group. This reference replaces the LINTRCV_DIO_PORT_SYM_NAME, LINTRCV_DIO_CHANNEL_SYM_NAME and LINTRCV_DIO_GROUP_SYM_NAME references in the Lin Trcv SWS.			
Multiplicity	1			
Туре	Choice reference to [DioChannel , DioChannelGroup , DioPort]			
Post-Build Variant Value	false			
Value Configuration Class	Pre-compile time	Χ	All Variants	
	Link time	1		
	Post-build time			
Scope / Dependency	scope: local			

No Included Containers

10.2.8 LinTrcvSpiSequence

SWS Item	ECUC_LinTrcv_00155:
Container Name	LinTrcvSpiSequence
Parent Container	LinTrcvAccess
Description	Container gives LIN transceiver driver information about one SPI sequence. One SPI sequence used by LIN transceiver driver is in exclusive use for it. No other driver is allowed to access this sequence. LIN transceiver driver may use one sequence to access n LIN transceiver hardwares chips of the same type or n sequences are used to access one single LIN transceiver hardware chip. If a LIN transceiver hardware has no SPI interface, there is no instance of this container.
Configuration Parameters	

SWS Item	ECUC_LinTrcv_00156:			
Name	LinTrcvSpiSequenceName			
Parent Container	LinTrcvSpiSequence			
Description	Reference to a Spi sequence configuration container.			
Multiplicity	1			
Туре	Symbolic name reference to [SpiSequence]			
Post-Build Variant Value	false			
Value Configuration Class	Pre-compile time	Χ	All Variants	
	Link time			
	Post-build time			
	scope: local dependency: SpiSequence			

No Included Containers

10.3 Published Information
