1 Introduction and functional overview

This document specifies the functionality, API and the configuration of the AUTOSAR Basic Software module Vehicle-2-X Facilities (V2xFac). The Vehicle-2-X Facilities layer together with the Vehicle-2-X Basic Transport (V2xBtp), the Vehicle-2-X GeoNetworking (V2xGn), Vehicle-2-X Management (V2xM) and the communication driver layer forms the V2X stack within the AUTOSAR architecture.

The V2xFac module is designed to be hardware independent.

The V2xFac module is dependent on services of V2X entities in the application layer and on lower V2xBtp module.

1.1 Architectural overview

Positioning of the V2xFac module within the AUTOSAR BSW and the Layered Software architecture is shown in below.
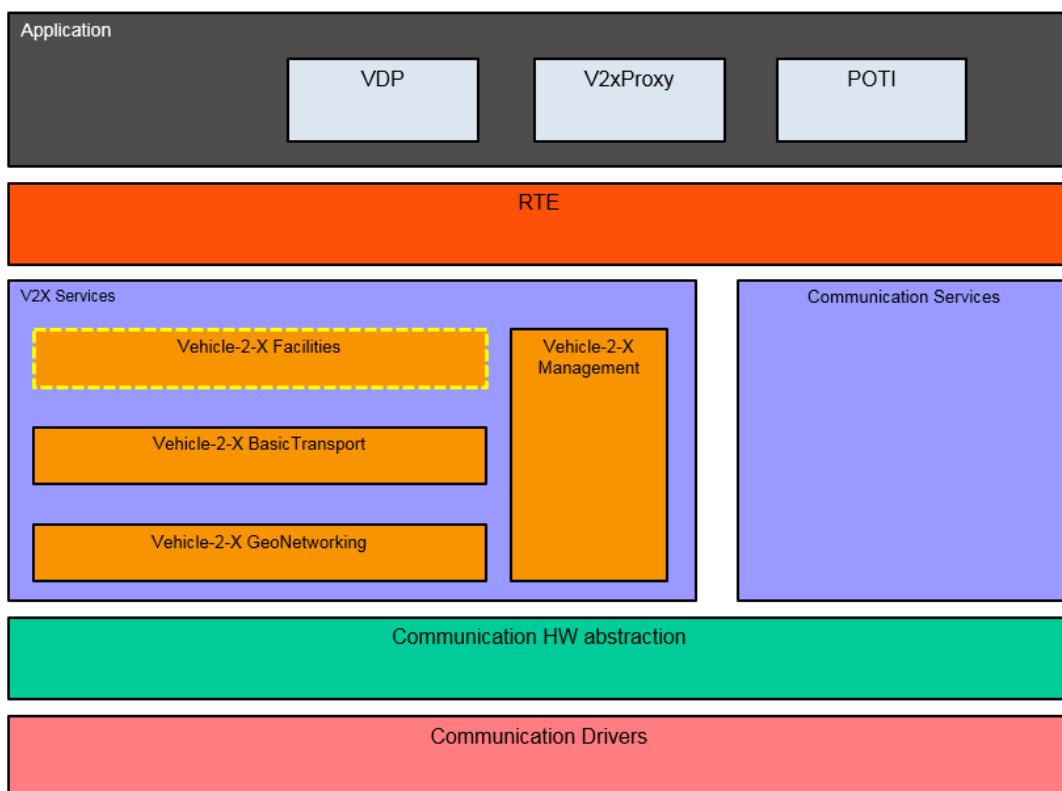

Figure 1 – AUTOSAR BSW software architecture - V2xFac scope

The V2xFac module supports common message management for data exchange between V2X applications.
It provides the basic services (BS) Cooperative Awareness (CA) and Decentralized Environmental Notification (DEN).

1.2 Functional overview

The V2xFac module implements the basic services CA and DEN.

1.2.1 Cooperative Awareness (CA)

1.2.1.1 CA basic service in the AUTOSAR architecture

The CA basic service is a facilities layer entity that operates the CAM protocol.
It provides two services: sending and receiving of CAMs.
The CA basic service generates and sends CAMs to other ITS-Ss or it receives
CAMs from ITS-Ss and provides them to the V2x-Applications in the application layer
(see [10] chapter 4).

The CA basic service uses the services provided by the protocol entities of the lower
layers of the V2X stack to disseminate the CAM.

Upon receiving a CAM, the CA basic service makes the content of the CAM available
to the V2X Applications.

Received CAMs are given to the upper Application layer via their standardized
AUTOSAR service interface V2xApplRxIndicationCam.

It may interface with the AUTOSAR application layer in order to collect relevant
information for CAM generation (Vehicle Data Provider - VDP) and to forward the
received CAM content for further processing (V2x Receiver).

1.2.1.2 CA basic service functional architecture

"The CA basic service is part of the Application Support domain of the Facilities
Layer according to ETSI TS 102 894-1 [12] shows the functional block diagram with
the functional blocks of the CA basic service and interfaces to other facilities and
layers."

For sending and receiving CAMs, the CA basic service part of the V2xFac shall
provide the following sub-functions
  Encode CAM
  Decode CAM
  CAM transmission management
  CAM reception management

For details see [10] chapter 5.2.

1.2.2 Decentralized Environmental Notification (DEN)

1.2.2.1 DEN basic service in the AUTOSAR architecture

The DEN basic service is a facilities layer entity that operates the DENM protocol. It provides services to entities at the AUTOSAR application layer.(refer to [11] chapter 4.2)
The DEN basic service generates and sends DENMs to other ITS-Ss or it receives DENMs from other ITS-Ss and provides them to the V2x-Applications in the application layer (see [11] chapter 5 and 6).

Upon receiving a DENM, the DEN basic service makes the content of the DENM available to the V2X Applications.

1.2.2.2 DEN basic service functional architecture

For sending and receiving DENMs, the DEN basic service shall provide the following sub-functions
    Encode DEN
    Decode DEN
    DEN transmission management
    DEN reception management
    Keep-Alive forwarding

For Details see [11] chapter 5.3. Position and Time management (POTI)
The POTI, as specified in ETSI TS 102 890-3 [14], provides the position of the ITS-S and time information.
Within the AUTOSAR architecture POTI service is a V2X Application within the Application layer and is not part of V2xFac.
For details See [11] chapter 5.1.

1.2.3 Vehicle Data Provider (VDP)

 "The VDP is connected with the vehicle network and provides the vehicle status information."
Within the AUTOSAR architecture VDP service is a V2X Application within the Application layer and is not part of V2xFac.

The VDP provides an interface to the lower layer (V2X Services).
The facilities basic services CA and DEN get vehicle relevant data from this interface.
The V2xM gets e.g. position and time information from this interface.

1.2.4 Local Dynamic Map (LDM)

The LDM as outlined in [15] is a database in the ITS-S, which may be updated with received CAM or DENM data.

V2x applications may retrieve information from the LDM for further processing.
Within the AUTOSAR architecture LDM service is a V2X Application within the Application layer and is not part of the V2xFac module.

For details see [15] chapter 5.1.

1.2.5 Infrastructure to Vehicle Information (IVI)

1.2.5.1 IVI service in the AUTOSAR architecture

The IVI service is a facilities layer entity that provides receiving of IVIMs.
The IVI service receives IVIMs from Infrastructure ITS-Ss and provides them to the V2x-Applications in the application layer (see [20] chapter 7).
Upon receiving an IVIM, the IVI service makes the content of the IVIM available to the V2X Applications.
Received IVIMs are given to the upper Application layer via their standardized AUTOSAR service interface V2xApplRxIndicationIvim.

1.2.5.2 IVI service functional architecture

The IVI service is part of the Application Support domain of the Facilities Layer according to ETSI TS 103 301 [20] which shows the functional block diagram with the functional blocks of the IVI service and interfaces to other facilities and layers.

For receiving IVIMs, the IVI service part of the V2xFac shall provide the following sub-functions
   Decode IVIM
   IVIM reception management

1.2.6 Road and Lane Topology (RLT) service

The RLT service is a facilities layer entity that provides receiving of MAPEMs.
The RLT service receives MAPEMs from Infrastructure ITS-Ss and provides them to the V2x-Applications in the application layer (see [20] chapter 6).
Upon receiving a MAPEM, the RLT service makes the content of the MAPEM available to the V2X Applications.
Received MAPEMs are given to the upper Application layer via their standardized AUTOSAR service interface V2xApplRxIndicationMapem.

1.2.6.1 RLT service functional architecture

The RLT service is part of the Application Support domain of the Facilities Layer according to ETSI TS 103 301 [20] shows the functional block diagram with the functional blocks of the RLT services and interfaces to other facilities and layers.

For receiving MAPEMs, the RLT service part of the V2xFac shall provide the following sub-functions
   Decode MAPEM
   MAPEM reception management

1.2.7 Traffic Light Maneuver (TLM) service

1.2.7.1 TLM service in the AUTOSAR architecture

The TLM service is a facilities layer entity that provides receiving of SPATEMs.

The TLM service receives SPATEMs from Infrastructure ITS-Ss and provides them to the V2x-Applications in the application layer (see [20] chapter 5).
Upon receiving a SPATEM, the TLM service makes the content of the SPATEM available to the V2X Applications.
Received SPATEMs are given to the application layer via their standardized AUTOSAR service interface V2xApplRxIndicationSpatem.

1.2.7.2   TLM service functional architecture

The TLM service is part of the Application Support domain of the Facilities Layer according to ETSI TS 103 301 [20] which shows the functional blocks of the TLM services and interfaces to other facilities and layers.

For receiving SPATEMs, the TLM service part of the V2xFac shall provide the following sub-functions
    Decode SPATEM
    SPATEM reception management

3.3 Related specification

AUTOSAR provides a General Specification on Basic Software (SWS BSW General)
[3] which is also valid for V2xFac.

Thus, the specification SWS BSW General [3] shall be considered as additional and required specification for V2xFac.

4 Constraints and assumptions

4.1 Limitations

- The V2X modules follow the guidance regarding the Day-1 scenarios defined by Car-2-Car-Consortium and C-Roads platform.
- Extensions to US, Japan, China regions are planned for the future releases.

4.2 Applicability to car domains

This specification is applicable to all car domains.

4.3 Authorisation Tickets and Pseudonyms

The Authorisation Ticket (AT) is referred to as Pseudonym in this document.

5 Dependencies to other modules

This section describes the relations of the V2xFac module to other modules within the AUTOSAR basic software architecture. It outlines the modules that are required or optional for the realization of the V2xFac module and the V2xFac services that these modules use.

5.1 AUTOSAR DET (Default Error Tracer)

In development mode, the V2xFac module reports errors through the Det_ReportError function of the DET Module [4].

5.2 AUTOSAR EcuM (Ecu State Manager)

The EcuM [5] initializes the V2xFac module by calling `V2xFac_Init` specified in 8.3.1.

5.3 V2x Vehicle Data Provider

The V2xFac module retrieves vehicle relevant data from the VDP application by using the Sender-Receiver-Interface V2xFacVdp (see **[SWS_V2xFac_00094]**).

5.4 V2x Proxy

The V2x Proxy is an Application that listens to every CAM and DENM via the Sender-Receiver-Interfaces V2xApplRxIndicationCam and V2xApplRxIndicationDenm and transmits it to one or more ECU's via in-vehicle networks. The transmission via the in-vehicle network is implementation specific.

5.5 V2x Applications

The V2xFac module delivers received DENM data to the V2x Applications by using the Sender-Receiver-Interface V2xApplRxIndicationDenm (see **[SWS_V2xFac_00100]**).

The V2xFac module delivers received CAM data to the V2x Applications by using the Sender-Receiver-Interface V2xApplRxIndicationCam (see **[SWS_V2xFac_00100]**).

The V2xFac module provides the Client-Server-Interface V2xFacDenBs for using the DEN basic service. The operations TriggerEvent, UpdateEvent or TerminateEvent are provided.

The V2xFac module delivers received IVIM data to the V2x Applications by using the Sender-Receiver-Interface V2xApplRxIndicationIvim (see **[SWS_V2xFac_00254]**).

Document ID 795: AUTOSAR_SWS_V2XFacilities

The V2xFac module delivers received MAPEM data to the V2x Applications by using the Sender-Receiver-Interface V2xApplRxIndicationMapem (see [**SWS_V2xFac_00260**]).

The V2xFac module delivers received SPATEM data to the V2x Applications by using the Sender-Receiver-Interface V2xApplRxIndicationSpatem (see [**SWS_V2xFac_00268**]).

5.6 **AUTOSAR V2xBtp**

The V2xFac module assumes a transmit request primitive (V2xBtp_Transmit [6], see [**SWS_V2xFac_00092**]) to be provided by the V2xBtp module.

5.7 **AUTOSAR V2xM**

The V2xFac module assumes a request primitive (see [**SWS_V2xFac_00092**]) to be provided by the Vehicle-2-X Management (V2xM) module.

7.4 DEN Functional Specification

As defined in ETSI documents (See [11] chapter 5.2) the DEN basic service is a facilities layer entity that implements the DEN protocol. It interfaces with ITS-S applications in order to receive the application request for DENM transmission and to provide the received DENM content to the ITS-S applications.

7.4.1 DEN Initialization

[SWS_V2xFac_00025]⌈
The function V2xFac_Init shall initialize an empty originating ITS-S message table.

API Function	Header File	Description
V2xBtp_Transmit	V2xBtp.h	This API is called by the V2xFac module to request sending a BTP-PDU to the peer BTP entity.
V2xM_CalcDistance	V2xM.h	Calculates the distance between two geographical points on earth with the assumption that they are on elevation 0.
V2xM_CalcHeading-InTolerance	V2xM.h	Calculates if difference of heading values are within a tolerance value
V2xM_GetPosition-AndTime	V2xM.h	Provides the instantaneous position information.
V2xM_GetRefTimePtr	V2xM.h	Provides a pointer to the time reference of the V2X-Stack.
V2xM_SetTolling-ZoneInformation	V2xM.h	Set available tolling zone information. This is done from V2xFac that receives this information via CAM messages.

10 Configuration specification

Chapter 10.1 specifies the structure (containers) and the parameters of the module V2xFac.

Chapter 10.2 specifies additionally published information of the module V2xFac.

10.1 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapter 7 and Chapter 8.

10.1.1 Variants
