## 1 Introduction and functional overview

This specification specifies the functionality, API and configuration of the AUTOSAR Basic Software module ICU driver.

The ICU driver is a module using the input capture unit (ICU) for demodulation of a PWM signal, counting pulses, measuring of frequency and duty cycle, generating simple interrupts and also wakeup interrupts.

The ICU driver provides services for

- Signal edge notification
- Controlling wakeup interrupts
- Periodic signal time measurement
- Edge time stamping, usable for the acquisition of non-periodic signals
- Edge counting

## 2 Acronyms and abbreviations

| Abbreviation / Acronym:     | Description:  |
|-----------------------------|---|
| Active Time                 | <p>This depends on the starting edge of the signal to be captured.</p> <ul style="list-style-type: none"> <li>Start edge = falling edge =&gt; Active Time = Low Time</li> <li>Start edge = rising edge =&gt; Active Time = High Time</li> <li>Start edge = both edges =&gt; Active Time = High Time (if rising edge occurs initially)</li> <li>Start edge = both edges =&gt; Active Time = Low Time (if falling edge occurs initially)</li> </ul> |
| DEM                         | Diagnostic Event Manager  |
| DET                         | Default Error Tracer  |
| EcuM                        | ECU State Manager   |
| Enumeration                 | This can be in “C” programming language an enum or a #define.   |
| ICU                         | Input Capture Unit (not Intensive Care Unit)  |
| ICU Channel                 | Represents a logical ICU entity bound to one input signal and the hardware resources for the configured measurement mode.   |
| ICU State                   | <p>Logical input state of an ICU Channel.</p> <p>It can be ICU_ACTIVE or ICU_IDLE.</p>  |
| ICU_ACTIVE                  | Input state of an ICU Channel, an activation edge has been detected.  |
| ICU_IDLE                    | Input state of an ICU Channel, no activation edge has been detected since the last call of Icu_GetInputState() or Icu_Init().   |
| Symbolic name for a channel | <p>A symbolic name is a substitution of a handle with a name. With this handle each channel and its related properties can be found within the configuration structure.</p> <p>In “C” programming language this can be realized e.g. by #defines and enums.</p>   |
| Wakeup event                | A wakeup event is understood as a pattern of edges, which will lead to the wake up of this driver. Nevertheless the decision whether a pattern is valid or <u>not</u> isn't done by this driver. This shall be done by an upper layer.  |

- [13] IEC 7498-1 The Basic Model, IEC Norm, 1994

### 3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [12] (SWS BSW General), which is also valid for ICU Driver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for ICU Driver.

## **4 Constraints and assumptions**

### **4.1 Limitations**

No limitations.

### **4.2 Applicability to car domains**

No restrictions.

## 5 Dependencies to other modules

### 5.1 Module DET (Default Error Tracer)

The detailed description of the detected errors can be found in chapter [7.2](#) and chapter [8.](#)] ()

### 5.2 Module MCU

The ICU driver depends on the system clock, prescaler(s) and PLL. Hence the length of an ICU timer tick depends on the clock settings made in the module MCU.

The ICU driver will not take care of setting the registers which configure the global clock, global prescaler(s) and PLL in its Init function. This has to be done by the MCU module. The ICU driver only configures local (ICU peripheral specific) clocks, prescalers and so on.

### 5.3 OS (Operating System)

The ICU driver uses interrupts and therefore there is a dependency on the OS which configures the interrupt sources. It will provide the call-back functions only.

The ICU driver will not take care of setting the registers for interrupt association in its Init function. The overall assignment and activation of the interrupt system is done by the Operating System.

### 5.4 Module PORT

The configuration of port pins used for the ICU as inputs is done by the PORT driver. Hence the PORT driver has to be initialized prior to the use of ICU functions. Otherwise ICU functions will exhibit undefined behaviour.

### 5.5 Module EcuM

**[SWS\_Icu\_00244]** [The ICU driver will do the reporting of wakeup interrupts to the EcuM.] ()

## 6 Requirements traceability

| Requirement   | Description  | Satisfied by  |
|---------------|--|---------------|
| SRS_BSW_00005 | Modules of the $\mu$ C Abstraction Layer (MCAL) may not have hard coded horizontal interfaces  | SWS_Icu_00380 |
| SRS_BSW_00006 | The source code of software modules above the $\mu$ C Abstraction Layer (MCAL) shall not be processor and compiler dependent.                  | SWS_Icu_00380 |
| SRS_BSW_00007 | All Basic SW Modules written in C language shall conform to the MISRA C 2012 Standard.   | SWS_Icu_00380 |
| SRS_BSW_00009 | All Basic SW Modules shall be documented according to a common standard.   | SWS_Icu_00380 |
| SRS_BSW_00010 | The memory consumption of all Basic SW Modules shall be documented for a defined configuration for all supported platforms.                    | SWS_Icu_00380 |
| SRS_BSW_00101 | The Basic Software Module shall be able to initialize variables and hardware in a separate initialization function                             | SWS_Icu_00006 |
| SRS_BSW_00160 | Configuration files of AUTOSAR Basic SW module shall be readable for human beings  | SWS_Icu_00380 |
| SRS_BSW_00161 | The AUTOSAR Basic Software shall provide a microcontroller abstraction layer which provides a standardized interface to higher software layers | SWS_Icu_00380 |
| SRS_BSW_00162 | The AUTOSAR Basic Software shall provide a hardware abstraction layer  | SWS_Icu_00380 |
| SRS_BSW_00164 | The Implementation of interrupt service routines shall be done by the Operating System, complex drivers or modules                             | SWS_Icu_00380 |
| SRS_BSW_00167 | All AUTOSAR Basic Software Modules shall provide configuration rules and constraints to enable plausibility checks                             | SWS_Icu_00380 |
| SRS_BSW_00168 | SW components shall be tested by a function defined in   | SWS_Icu_00380 |

|               |   |  |
|---------------|---|--|
|               | a common API in the Basis-SW  |  |
| SRS_BSW_00170 | The AUTOSAR SW Components shall provide information about their dependency from faults, signal qualities, driver demands            | SWS_Icu_00380  |
| SRS_BSW_00171 | Optional functionality of a Basic-SW component that is not required in the ECU shall be configurable at pre-compile-time            | SWS_Icu_00092, SWS_Icu_00095, SWS_Icu_00096, SWS_Icu_00097, SWS_Icu_00098, SWS_Icu_00099, SWS_Icu_00100, SWS_Icu_00101, SWS_Icu_00102, SWS_Icu_00103, SWS_Icu_00104, SWS_Icu_00105, SWS_Icu_00106, SWS_Icu_00122 |
| SRS_BSW_00172 | The scheduling strategy that is built inside the Basic Software Modules shall be compatible with the strategy used in the system    | SWS_Icu_00380  |
| SRS_BSW_00300 | All AUTOSAR Basic Software Modules shall be identified by an unambiguous name   | SWS_Icu_00380  |
| SRS_BSW_00301 | All AUTOSAR Basic Software Modules shall only import the necessary information  | SWS_Icu_00380  |
| SRS_BSW_00302 | All AUTOSAR Basic Software Modules shall only export information needed by other modules  | SWS_Icu_00380  |
| SRS_BSW_00304 | All AUTOSAR Basic Software Modules shall use the following data types instead of native C data types                                | SWS_Icu_00380  |
| SRS_BSW_00305 | Data types naming convention  | SWS_Icu_00380  |
| SRS_BSW_00306 | AUTOSAR Basic Software Modules shall be compiler and platform independent   | SWS_Icu_00380  |
| SRS_BSW_00307 | Global variables naming convention  | SWS_Icu_00380  |
| SRS_BSW_00308 | AUTOSAR Basic Software Modules shall not define global data in their header files, but in the C file                                | SWS_Icu_00380  |
| SRS_BSW_00309 | All AUTOSAR Basic Software Modules shall indicate all global data with read-only purposes by explicitly assigning the const keyword | SWS_Icu_00380  |
| SRS_BSW_00310 | API naming convention   | SWS_Icu_00380  |
| SRS_BSW_00312 | Shared code shall be  | SWS_Icu_00380  |

|               |   |  |
|---------------|---|--|
|               | reentrant   |  |
| SRS_BSW_00314 | All internal driver modules shall separate the interrupt frame definition from the service routine                | SWS_Icu_00380  |
| SRS_BSW_00318 | Each AUTOSAR Basic Software Module file shall provide version numbers in the header file                          | SWS_Icu_00380  |
| SRS_BSW_00321 | The version numbers of AUTOSAR Basic Software Modules shall be enumerated according specific rules                | SWS_Icu_00380  |
| SRS_BSW_00323 | All AUTOSAR Basic Software Modules shall check passed API parameters for validity                                 | SWS_Icu_00024, SWS_Icu_000385, SWS_Icu_00043, SWS_Icu_00125, SWS_Icu_00386, SWS_Icu_00387, SWS_Icu_00388, SWS_Icu_00389, SWS_Icu_00390, SWS_Icu_00391, SWS_Icu_00392, SWS_Icu_00393, SWS_Icu_00394, SWS_Icu_00395, SWS_Icu_00396, SWS_Icu_00397, SWS_Icu_00398, SWS_Icu_00399, SWS_Icu_00400, SWS_Icu_00401, SWS_Icu_00402, SWS_Icu_00403, SWS_Icu_00404 |
| SRS_BSW_00325 | The runtime of interrupt service routines and functions that are running in interrupt context shall be kept short | SWS_Icu_00380  |
| SRS_BSW_00327 | Error values naming convention  | SWS_Icu_00380  |
| SRS_BSW_00328 | All AUTOSAR Basic Software Modules shall avoid the duplication of code  | SWS_Icu_00380  |
| SRS_BSW_00330 | It shall be allowed to use macros instead of functions where source code is used and runtime is critical          | SWS_Icu_00380  |
| SRS_BSW_00331 | All Basic Software Modules shall strictly separate error and status information                                   | SWS_Icu_00380  |
| SRS_BSW_00333 | For each callback function it shall be specified if it is called from interrupt context or not                    | SWS_Icu_00380  |
| SRS_BSW_00334 | All Basic Software Modules shall provide an XML file that contains the meta data                                  | SWS_Icu_00380  |
| SRS_BSW_00335 | Status values naming convention   | SWS_Icu_00380  |
| SRS_BSW_00336 | Basic SW module shall be able to shutdown   | SWS_Icu_00037  |
| SRS_BSW_00341 | Module documentation shall  | SWS_Icu_00380  |

|               |   |               |
|---------------|---|---------------|
|               | contains all needed informations  |               |
| SRS_BSW_00342 | It shall be possible to create an AUTOSAR ECU out of modules provided as source code and modules provided as object code, even mixed              | SWS_Icu_00380 |
| SRS_BSW_00344 | BSW Modules shall support link-time configuration   | SWS_Icu_00006 |
| SRS_BSW_00347 | A Naming separation of different instances of BSW drivers shall be in place   | SWS_Icu_00380 |
| SRS_BSW_00348 | All AUTOSAR standard types and constants shall be placed and organized in a standard type header file   | SWS_Icu_00380 |
| SRS_BSW_00350 | All AUTOSAR Basic Software Modules shall allow the enabling/disabling of detection and reporting of development errors.                           | SWS_Icu_00380 |
| SRS_BSW_00353 | All integer type definitions of target and compiler specific scope shall be placed and organized in a single type header                          | SWS_Icu_00380 |
| SRS_BSW_00357 | For success/failure of an API call a standard return type shall be defined  | SWS_Icu_00380 |
| SRS_BSW_00358 | The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void   | SWS_Icu_00380 |
| SRS_BSW_00359 | All AUTOSAR Basic Software Modules callback functions shall avoid return types other than void if possible  | SWS_Icu_00187 |
| SRS_BSW_00360 | AUTOSAR Basic Software Modules callback functions are allowed to have parameters  | SWS_Icu_00380 |
| SRS_BSW_00361 | All mappings of not standardized keywords of compiler specific scope shall be placed and organized in a compiler specific type and keyword header | SWS_Icu_00380 |
| SRS_BSW_00369 | All AUTOSAR Basic Software Modules shall not return specific development error codes via the API  | SWS_Icu_00049 |
| SRS_BSW_00371 | The passing of function pointers as API parameter is  | SWS_Icu_00380 |

|               |  |  |
|---------------|--|--|
|               | forbidden for all AUTOSAR Basic Software Modules   |  |
| SRS_BSW_00373 | The main processing function of each AUTOSAR Basic Software Module shall be named according the defined convention                             | SWS_Icu_00380  |
| SRS_BSW_00377 | A Basic Software Module can return a module specific types   | SWS_Icu_00380  |
| SRS_BSW_00378 | AUTOSAR shall provide a boolean type   | SWS_Icu_00380  |
| SRS_BSW_00379 | All software modules shall provide a module identifier in the header file and in the module XML description file.                              | SWS_Icu_00380  |
| SRS_BSW_00383 | The Basic Software Module specifications shall specify which other configuration files from other modules they use at least in the description | SWS_Icu_00380  |
| SRS_BSW_00384 | The Basic Software Module specifications shall specify at least in the description which other modules they require                            | SWS_Icu_00131  |
| SRS_BSW_00395 | The Basic Software Module specifications shall list all configuration parameter dependencies   | SWS_Icu_00380  |
| SRS_BSW_00397 | The configuration parameters in pre-compile time are fixed before compilation starts   | SWS_Icu_00380  |
| SRS_BSW_00398 | The link-time configuration is achieved on object code basis in the stage after compiling and before linking                                   | SWS_Icu_00380  |
| SRS_BSW_00399 | Parameter-sets shall be located in a separate segment and shall be loaded after the code   | SWS_Icu_00380  |
| SRS_BSW_00400 | Parameter shall be selected from multiple sets of parameters after code has been loaded and started  | SWS_Icu_00380  |
| SRS_BSW_00404 | BSW Modules shall support post-build configuration   | SWS_Icu_00006  |
| SRS_BSW_00405 | BSW Modules shall support multiple configuration sets  | SWS_Icu_00006  |
| SRS_BSW_00406 | A static status variable denoting if a BSW module is initialized shall be initialized with value 0 before any APIs of the BSW module is called | SWS_Icu_000385, SWS_Icu_00386, SWS_Icu_00387, SWS_Icu_00388, SWS_Icu_00389, SWS_Icu_00390, SWS_Icu_00391, SWS_Icu_00392, SWS_Icu_00393, SWS_Icu_00394, |

| SRS_BSW_00408 | All AUTOSAR Basic Software Modules configuration parameters shall be named according to a specific naming rule                            | SWS_Icu_00380   |
| SRS_BSW_00409 | All production code error ID symbols are defined by the Dem module and shall be retrieved by the other BSW modules from Dem configuration | SWS_Icu_00380   |
| SRS_BSW_00410 | Compiler switches shall have defined values   | SWS_Icu_00055, SWS_Icu_00063,<br>SWS_Icu_00090, SWS_Icu_00092,<br>SWS_Icu_00095, SWS_Icu_00096,<br>SWS_Icu_00097, SWS_Icu_00099,<br>SWS_Icu_00100, SWS_Icu_00101,<br>SWS_Icu_00102, SWS_Icu_00103,<br>SWS_Icu_00104, SWS_Icu_00105,<br>SWS_Icu_00106, SWS_Icu_00122 |
| SRS_BSW_00413 | An index-based accessing of the instances of BSW modules shall be done  | SWS_Icu_00380   |
| SRS_BSW_00414 | Init functions shall have a pointer to a configuration structure as single parameter  | SWS_Icu_00380   |
| SRS_BSW_00415 | Interfaces which are provided exclusively for one module shall be separated into a dedicated header file                                  | SWS_Icu_00380   |
| SRS_BSW_00416 | The sequence of modules to be initialized shall be configurable   | SWS_Icu_00380   |
| SRS_BSW_00417 | Software which is not part of the SW-C shall report error events only after the DEM is fully operational.                                 | SWS_Icu_00380   |
| SRS_BSW_00422 | Pre-de-bouncing of error status information is done within the DEM  | SWS_Icu_00380   |
| SRS_BSW_00423 | BSW modules with AUTOSAR interfaces shall be describable with the means of the SW-C Template  | SWS_Icu_00380   |
| SRS_BSW_00424 | BSW module main processing functions shall not be allowed to enter a wait state   | SWS_Icu_00380   |
| SRS_BSW_00425 | The BSW module description  | SWS_Icu_00380   |

|               |  |  |
|---------------|--|--|
|               | template shall provide means to model the defined trigger conditions of schedulable objects                                      |  |
| SRS_BSW_00426 | BSW Modules shall ensure data consistency of data which is shared between BSW modules  | SWS_Icu_00380  |
| SRS_BSW_00427 | ISR functions shall be defined and documented in the BSW module description template   | SWS_Icu_00380  |
| SRS_BSW_00428 | A BSW module shall state if its main processing function(s) has to be executed in a specific order or sequence                   | SWS_Icu_00380  |
| SRS_BSW_00429 | Access to OS is restricted   | SWS_Icu_00380  |
| SRS_BSW_00432 | Modules should have separate main processing functions for read/receive and write/transmit data path                             | SWS_Icu_00380  |
| SRS_BSW_00433 | Main processing functions are only allowed to be called from task bodies provided by the BSW Scheduler                           | SWS_Icu_00380  |
| SRS_BSW_00437 | Memory mapping shall provide the possibility to define RAM segments which are not to be initialized during startup               | SWS_Icu_00380  |
| SRS_BSW_00439 | Enable BSW modules to handle interrupts  | SWS_Icu_00380  |
| SRS_BSW_00440 | The callback function invocation by the BSW module shall follow the signature provided by RTE to invoke servers via Rte_Call API | SWS_Icu_00380  |
| SRS_BSW_00441 | Naming convention for type, macro and function   | SWS_Icu_00380  |
| SRS_BSW_00450 | A Main function of a un-initialized module shall return immediately  | SWS_Icu_00380  |
| SRS_Icu_12305 | The ICU driver shall allow to enable/disable the notification for an ICU channel at runtime                                      | SWS_Icu_00009, SWS_Icu_00010, SWS_Icu_00042, SWS_Icu_00044 |
| SRS_Icu_12368 | The ICU driver shall support basic static configurations per channel   | SWS_Icu_00039  |
| SRS_Icu_12369 | The ICU driver shall provide notification for an ICU Channel at the configured   | SWS_Icu_00021  |

|               |  |   |
|---------------|--|---|
|               | signal edge  |   |
| SRS_Icu_12370 | The ICU driver shall provide a service for selecting the sleep mode  | SWS_Icu_00008                               |
| SRS_Icu_12371 | The ICU driver shall provide a synchronous service that returns the status of the ICU input                        | SWS_Icu_00030, SWS_Icu_00031, SWS_Icu_00032 |
| SRS_Icu_12407 | After initialization of the ICU driver all notifications shall be disabled   | SWS_Icu_00040, SWS_Icu_00061                |
| SRS_Icu_12408 | The ICU driver shall provide a service for enabling / disabling the wake-up capability of single ICU channels      | SWS_Icu_00013, SWS_Icu_00014                |
| SRS_Icu_12425 | For each ICU Channel the 'property' that could be measured shall be configurable                                   | SWS_Icu_00039, SWS_Icu_00088                |
| SRS_Icu_12429 | The ICU Driver shall provide the functionality to deinitialize ICU channels to their power on reset state          | SWS_Icu_00036                               |
| SRS_Icu_12430 | The ICU driver shall provide an asynchronous service for starting the timestamp measurement on an ICU channel      | SWS_Icu_00063, SWS_Icu_00066                |
| SRS_Icu_12431 | The ICU driver shall provide a synchronous service for canceling the timestamp measurement on an ICU channel       | SWS_Icu_00067                               |
| SRS_Icu_12432 | Edge counting service shall be available on an ICU channel   | SWS_Icu_00078                               |
| SRS_Icu_12433 | Edge counting service on a ICU channel shall be disabled   | SWS_Icu_00079                               |
| SRS_Icu_12434 | Edge counting read service shall be available  | SWS_Icu_00080                               |
| SRS_Icu_12435 | The elapsed Signal High Time for each ICU Channel shall be provided  | SWS_Icu_00082                               |
| SRS_Icu_12436 | The High time and Period Time of an ICU Channel shall be provided  | SWS_Icu_00084                               |
| SRS_Icu_12438 | The ICU driver shall provide the functionality to capture timer values on configurable edges to an external buffer | SWS_Icu_00063                               |
| SRS_Icu_12439 | Edges of a signal shall be   | SWS_Icu_00072, SWS_Icu_00073,               |

|                |  |  |
|----------------|--|--|
|                | counted by the ICU   | SWS_Icu_00074  |
| SRS_Icu_12442  | The elapsed Signal Low Time for each ICU Channel shall be provided   | SWS_Icu_00081  |
| SRS_Icu_12443  | The elapsed Period Time for an ICU Channel shall be provided   | SWS_Icu_00083  |
| SRS_Icu_12444  | The ICU driver shall provide a notification if the number of requested timestamps are acquired   | SWS_Icu_00215  |
| SRS_Icu_12453  | The Timestamp index service shall be provided by ICU   | SWS_Icu_00071  |
| SRS_Icu_12455  | If circular buffer handling is configured, the driver shall restart at the beginning of the external buffer, when the end of the buffer is reached | SWS_Icu_00039  |
| SRS_Icu_12456  | If linear buffer handling is configured, the driver shall stop capturing timer values, when the end of the buffer is reached                       | SWS_Icu_00039, SWS_Icu_00065                               |
| SRS_Icu_13100  | Resetting the value of counted edges of an ICU channel shall be available  | SWS_Icu_00072  |
| SRS_SPAL_00157 | All drivers and handlers of the AUTOSAR Basic Software shall implement notification mechanisms of drivers and handlers                             | SWS_Icu_00021, SWS_Icu_00030                               |
| SRS_SPAL_12056 | All driver modules shall allow the static configuration of notification mechanism  | SWS_Icu_00018  |
| SRS_SPAL_12057 | All driver modules shall implement an interface for initialization   | SWS_Icu_00006, SWS_Icu_00040, SWS_Icu_00060, SWS_Icu_00061 |
| SRS_SPAL_12063 | All driver modules shall only support raw value mode   | SWS_Icu_00063, SWS_Icu_00081, SWS_Icu_00082, SWS_Icu_00083 |
| SRS_SPAL_12064 | All driver modules shall raise an error if the change of the operation mode leads to degradation of running operations                             | SWS_Icu_00133  |
| SRS_SPAL_12067 | All driver modules shall set their wake-up conditions depending on the selected operation mode   | SWS_Icu_00008, SWS_Icu_00011, SWS_Icu_00012                |
| SRS_SPAL_12068 | The modules of the MCAL shall be initialized in a defined sequence   | SWS_Icu_00380  |
| SRS_SPAL_12069 | All drivers of the SPAL that   | SWS_Icu_00055, SWS_Icu_00056,                              |

|                |   |  |
|----------------|---|--|
|                | wake up from a wake-up interrupt shall report the wake-up reason  | SWS_Icu_00057  |
| SRS_SPAL_12075 | All drivers with random streaming capabilities shall use application buffers                                    | SWS_Icu_00063  |
| SRS_SPAL_12077 | All drivers shall provide a non blocking implementation   | SWS_Icu_00380  |
| SRS_SPAL_12092 | The driver's API shall be accessed by its handler or manager  | SWS_Icu_00380  |
| SRS_SPAL_12125 | All driver modules shall only initialize the configured resources   | SWS_Icu_00054  |
| SRS_SPAL_12129 | The ISRs shall be responsible for resetting the interrupt flags and calling the according notification function | SWS_Icu_00119  |
| SRS_SPAL_12163 | All driver modules shall implement an interface for de-initialization   | SWS_Icu_00036, SWS_Icu_00037   |
| SRS_SPAL_12169 | All driver modules that provide different operation modes shall provide a service for mode selection            | SWS_Icu_00008  |
| SRS_SPAL_12265 | Configuration data shall be kept constant   | SWS_Icu_00380  |
| SRS_SPAL_12448 | All driver modules shall have a specific behavior after a development error detection                           | SWS_Icu_00049, SWS_Icu_00107, SWS_Icu_00108  |
| SRS_SPAL_12461 | Specific rules regarding initialization of controller registers shall apply to all driver implementations       | SWS_Icu_00006, SWS_Icu_00051, SWS_Icu_00052, SWS_Icu_00053, SWS_Icu_00128, SWS_Icu_00129 |
| SRS_SPAL_12463 | The register initialization settings shall be combined and forwarded  | SWS_Icu_00380  |

## 7 Functional specification

### 7.1 General behavior

#### 7.1.1 Background & Rationale

To ensure data consistency re-entrant code shall be provided.

#### 7.1.2 Requirements

**[SWS\_Icu\_00050]** [The Icu module functions for different channel numbers shall be re-entrant, except for:

- Icu\_Init()
- Icu\_DeInit()
- Icu\_SetMode()
- Icu\_GetVersionInfo() ] ()

**[SWS\_Icu\_00149]** [The Icu module's environment shall check the integrity if several calls for the same ICU channel are used during runtime in different tasks or ISRs.] ()

**[SWS\_Icu\_00150]** [The Icu module shall not check the integrity if several calls for the same ICU channel are used during runtime in different tasks or ISRs. ] ()

**[SWS\_Icu\_00258]** [The Icu module has 2 modes:

- ICU\_MODE\_NORMAL
- ICU\_MODE\_SLEEP

] ()

In ICU\_MODE\_NORMAL mode all notifications are available as

- **[SWS\_Icu\_00011]** [configured by service Icu\_SetActivationCondition() or IcuDefaultStartEdge.] (SRS\_SPAL\_12067)
- **[SWS\_Icu\_00259]** [selected by the Icu\_DisableNotification() and Icu\_EnableNotification() services before or after the call of Icu\_SetMode().] ()

In ICU\_MODE\_SLEEP mode

- **[SWS\_Icu\_00012]** [only those wakeup events are available which are configured as wakeup capable, enabled via Icu\_EnableWakeup() after Icu\_Init() and which are not disabled via service Icu\_DisableWakeup() ] (SRS\_SPAL\_12067)

- **[SWS\_Icu\_00260]** [all other interrupts handled by this module are disabled and must not lead to an exit from the reduced power mode state (e.g. idle, halt) of the MCU if the event occurs. ] ()
- **[SWS\_Icu\_00261]** [All channels are stopped except those channels
  - which have been configured as wakeup capable and
  - which were explicitly enabled by the call of `Icu_EnableWakeup.`] ()

**[SWS\_Icu\_00088]** [The module Icu shall allow the configuration per channel of the definition on which edge the period starts.] (SRS\_Icu\_12425)

### 7.1.3 Time Unit Ticks

#### 7.1.3.1 Background & Rationale

To get times out of register values it is necessary to know the oscillator frequency, prescalers and so on. Since these settings are made in the MCU module and/or in other modules it is not possible to calculate such times.

Hence the conversions between time and ticks shall be part of an upper layer.

#### 7.1.3.2 Requirements

All time units used within the API services of the ICU driver are unit ticks.

## 7.2 Error classification

Section 7.x "Error Handling" of the document "General Specification of Basic Software Modules" describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.:

### 7.2.1 Development Errors

**[SWS\_Icu\_00382]**[

| <i>Type of error</i>  | <i>Related error code</i> | <i>Error value</i> |
|---|---------------------------|--------------------|
| API IS called with invalid pointer.   | ICU_E_PARAM_POINTER       | 0x0A               |
| API service used with an invalid channel identifier or channel was not configured for the functionality of the calling API. | ICU_E_PARAM_CHANNEL       | 0x0B               |
| API service used with an invalid or not feasible activation.  | ICU_E_PARAM_ACTIVATION    | 0x0C               |

|   |                             |      |
|---|-----------------------------|------|
| Init function failed.   | ICU_E_INIT_FAILED           | 0x0D |
| API service used with an invalid buffer size.   | ICU_E_PARAM_BUFFER_SIZE     | 0x0E |
| API service Icu_SetMode used with an invalid mode.  | ICU_E_PARAM_MODE            | 0x0F |
| API service used without module initialization.   | ICU_E_UNINIT                | 0x14 |
| API service Icu_SetMode is called while a running operation.  | ICU_E_BUSY_OPERATION        | 0x16 |
| API Icu_Init service is called and when the ICU driver and the Hardware are already initialized.            | ICU_E_ALREADY_INITIALIZED   | 0x17 |
| API Icu_StartTimeStamp is called and the parameter Notify Interval is invalid (e.g."0", NotifyInterval < 1) | ICU_E_PARAM_NOTIFY_INTERVAL | 0x18 |
| API Icu_GetVersionInfo is called and the parameter versioninfo is is invalid ( e.g. NULL )                  | ICU_E_PARAM_VINFO           | 0x19 |

]()

## 7.2.2 Runtime Errors

### [SWS\_Icu\_91004]

| Type of error  | Related error code | Error value |
|--|--------------------|-------------|
| API service Icu_StopTimeStamp called on a channel which was not started or already stopped | ICU_E_NOT_STARTED  | 0x15        |

]()

## 7.2.3 Transient Faults

There are no transient faults.

## 7.2.4 Production Errors

There are no production errors.

## 7.2.5 Extended Production Errors

There are no extended production errors.

## 8 API specification

### 8.1 Imported types

In this chapter all types included from the following modules are listed:

[SWS\_Icu\_00276]

| Module | Header File | Imported Type         |
|--------|-------------|-----------------------|
| EcuM   | EcuM.h      | EcuM_WakeupSourceType |
| Std    | Std_Types.h | Std_ReturnType        |
|        | Std_Types.h | Std_VersionInfoType   |

]()

### 8.2 Type definitions

#### 8.2.1 Icu\_ModeType

[SWS\_Icu\_00277]

| Name          | Icu_ModeType  |      |   |
|---------------|---|------|---|
| Kind          | Enumeration   |      |   |
| Range         | ICU_MODE_NORMAL   | 0x00 | Normal operation, all used interrupts are enabled according to the notification requests.                             |
|               | ICU_MODE_SLEEP  | 0x01 | Reduced power operation. In sleep mode only those notifications are available which are configured as wakeup capable. |
| Description   | Allow enabling / disabling of all interrupts which are not required for the ECU wakeup. |      |   |
| Available via | Icu.h   |      |   |

]()

#### 8.2.2 Icu\_ChannelType

[SWS\_Icu\_00278]

| Name    | Icu_ChannelType |
|---------|-----------------|
| Kind    | Type            |
| Derived | uint            |

|                      |                                      |    |   |
|----------------------|--------------------------------------|----|---|
| <b>from</b>          |                                      |    |   |
| <b>Range</b>         | --                                   | -- | This is implementation specific but not all values may be valid within the type. This type shall be chosen in order to have the most efficient implementation on a specific microcontroller platform. |
| <b>Description</b>   | Numeric identifier of an ICU channel |    |   |
| <b>Available via</b> | Icu.h                                |    |   |

]()

### 8.2.3 Icu\_InputStateType

[SWS\_Icu\_00279]

|                      |                               |      |  |
|----------------------|-------------------------------|------|--|
| <b>Name</b>          | Icu_InputStateType            |      |  |
| <b>Kind</b>          | Enumeration                   |      |  |
| <b>Range</b>         | ICU_ACTIVE                    | 0x00 | An activation edge has been detected   |
|                      | ICU_IDLE                      | 0x01 | No activation edge has been detected since the last call of Icu_GetInputState() or Icu_Init(). |
| <b>Description</b>   | Input state of an ICU channel |      |  |
| <b>Available via</b> | Icu.h                         |      |  |

]()

### 8.2.4 Icu\_ConfigType

[SWS\_Icu\_00280]

|                      |   |  |
|----------------------|---|--|
| <b>Name</b>          | Icu_ConfigType                          |  |
| <b>Kind</b>          | Structure                               |  |
| <b>Elements</b>      | --                                      |  |
|                      | <b>Type</b>                             | --   |
|                      | <b>Comment</b>                          | Hardware and implementation dependent structure. The contents of the initialization data structure are microcontroller specific. |
| <b>Description</b>   | This type contains initialization data. |  |
| <b>Available via</b> | Icu.h                                   |  |

J()

**[SWS\_Icu\_00281]** [The `Icu_ConfigType` shall contain:Optional parameters

- MCU dependent properties for used HW units.
- Clock source with optional prescaler (if provided by HW). ] ()

**[SWS\_Icu\_00039]** [The definition for each Channel within the `Icu_ConfigType` shall contain:Common parameters

- Default Start Edge
- Hardware Specific Settings per channel
- Measurement Mode
  - Signal Edge Detection / Notification
  - Signal Measurement
  - Timestamp
  - Edge Counter

Specific parameters

] (SRS\_Icu\_12368, SRS\_Icu\_12425, SRS\_Icu\_12455, SRS\_Icu\_12456)

**[SWS\_Icu\_00283]** [If the measurement mode for each Channel within the `Icu_ConfigType` is configured as “signal edge detection” the notification function for signal notification shall be configurable. ] ()**[SWS\_Icu\_00284]** [If the measurement mode for each Channel within the `Icu_ConfigType` is configured as “signal measurement”, the property that could be measured shall be configurable. ## 8.3 Function definitions

This is a list of functions provided for upper layer modules.

### 8.3.1 Icu\_Init

[SWS\_Icu\_00191]

|                         |  |   |
|-------------------------|--|---|
| <b>Service Name</b>     | Icu_Init   |   |
| <b>Syntax</b>           | <pre>void Icu_Init (     const Icu_ConfigType* ConfigPtr )</pre> |   |
| <b>Service ID [hex]</b> | 0x00   |   |
| <b>Sync/Async</b>       | Synchronous  |   |
| <b>Reentrancy</b>       | Non Reentrant  |   |
| <b>Parameters (in)</b>  | ConfigPtr  | Pointer to a selected configuration structure |

|                           |                                       |
|---------------------------|---------------------------------------|
| <b>Parameters (inout)</b> | None                                  |
| <b>Parameters (out)</b>   | None                                  |
| <b>Return value</b>       | None                                  |
| <b>Description</b>        | This function initializes the driver. |
| <b>Available via</b>      | Icu.h                                 |

]()

**[SWS\_Icu\_00297]** [The function `Icu_Init` shall be non re-entrant.] ()

**[SWS\_Icu\_00298]** [The function `Icu_Init` initializes the driver.] ()

**[SWS\_Icu\_00006]** [The function `Icu_Init` shall initialize all relevant registers of the configured hardware with the values of the structure referenced by the parameter `ConfigPtr`.] (SRS\_BSW\_00344, SRS\_BSW\_00404, SRS\_BSW\_00405, SRS\_BSW\_00101, SRS\_SPAL\_12057, SRS\_SPAL\_12461)

The following rules regarding initialization of controller registers shall apply to this driver implementation:

- **[SWS\_Icu\_00051]** [If the hardware allows for only one usage of the register, the driver module implementing that functionality is responsible for initializing the register.] (SRS\_SPAL\_12461)
- **[SWS\_Icu\_00052]** [If the register can affect several hardware modules and if it is an I/O register it shall be initialized by the PORT driver.] (SRS\_SPAL\_12461)
- **[SWS\_Icu\_00053]** [If the register can affect several hardware modules and if it is not an I/O register it shall be initialized by the MCU driver.] (SRS\_SPAL\_12461)
- **[SWS\_Icu\_00128]** [One-time writable registers that require initialization directly after reset shall be initialized by the start-up code.] (SRS\_SPAL\_12461)
- **[SWS\_Icu\_00129]** [All other registers shall be initialized by the startup code.] (SRS\_SPAL\_12461)

**[SWS\_Icu\_00061]** [The function `Icu_Init` shall disable all notifications.] (SRS\_SPAL\_12057, SRS\_Icu\_12407)

**[SWS\_Icu\_00121]** [The function `Icu_Init` shall disable the wakeup-capability of all channels.] ()

**[SWS\_Icu\_00040]** [The function `Icu_Init` shall set all used ICU channels to status `ICU_IDLE`.] (SRS\_SPAL\_12057, SRS\_Icu\_12407)

**[SWS\_Icu\_00060]** [The function `Icu_Init` shall set the module mode to `ICU_MODE_NORMAL`.] (SRS\_SPAL\_12057)

**[SWS\_Icu\_00054]** [The function `Icu_Init` shall only set the resources that are configured in the configuration file (including clearing of pending interrupt flags).

The Icu module's environment shall not call `Icu_Init` during a running operation (e. g. timestamp measurement or edge counting).] (SRS\_SPAL\_12125)

**[SWS\_Icu\_00220]** [If development error detection for the ICU module is enabled and the function `Icu_Init` is called when the ICU driver and hardware are already initialized, the function `Icu_Init` shall raise development error `ICU_E_ALREADY_INITIALIZED` and return without any action.] ()

**[SWS\_Icu\_00138]** [The initialization function of this module shall always have a pointer as a parameter, even though for Variant PC no configuration set shall be given. Instead a NULL pointer shall be passed to the initialization function.] ()

Note: Parameter checking for the initialization function is specified within BSW General.

### 8.3.2 Icu\_DeInit

**[SWS\_Icu\_00193]**[

|                           |  |
|---------------------------|--|
| <b>Service Name</b>       | Icu_DeInit                                   |
| <b>Syntax</b>             | <pre>void Icu_DeInit (     void )</pre>      |
| <b>Service ID [hex]</b>   | 0x01   |
| <b>Sync/Async</b>         | Synchronous                                  |
| <b>Reentrancy</b>         | Non Reentrant                                |
| <b>Parameters (in)</b>    | None   |
| <b>Parameters (inout)</b> | None   |
| <b>Parameters (out)</b>   | None   |
| <b>Return value</b>       | None   |
| <b>Description</b>        | This function de-initializes the ICU module. |

|                      |       |
|----------------------|-------|
| <b>Available via</b> | lcu.h |
|----------------------|-------|

]()

**[SWS\_Icu\_00036]** [The function `Icu_DeInit` shall set the state of the peripherals used by configuration as the same after power on reset.] (SRS\_SPAL\_12163, SRS\_Icu\_12429)

**[SWS\_Icu\_00300]** [Values of registers which are not writeable are excluded from setting the state by the function `Icu_DeInit`.] ()

**[SWS\_Icu\_00091]** [The function `Icu_DeInit` shall influence only the peripherals which are allocated by static configuration and/or the runtime configuration set passed by the previous call of `Icu_Init()`.] ()

**[SWS\_Icu\_00037]** [The function `Icu_DeInit` shall disable all used interrupts and notifications.] (SRS\_BSW\_00336, SRS\_SPAL\_12163)

**[SWS\_Icu\_00152]** [The Icu module's environment shall not call `Icu_DeInit` during a running operation (e. g. timestamp measurement or edge counting)] ()

**[SWS\_Icu\_00092]** [The function `Icu_DeInit` shall be pre compile time configurable by configuration parameter `IcuDeInitApi`.] (SRS\_BSW\_00410, SRS\_BSW\_00171)

**[SWS\_Icu\_00301]** [The function `Icu_DeInit` shall be configurable ON/OFF by configuration parameter `IcuDeInitApi`.] ()

**[SWS\_Icu\_00221]** [A re-initialization of the ICU module by executing the `Icu_Init()` function requires a de-initialization before by executing the `Icu_DeInit()` function.] ()

**[SWS\_Icu\_00299]** [`Icu_DeInit` operation is Non re-entrant.] ()

**[SWS\_Icu\_000385]** [If development error detection for the Icu module is enabled: This function shall raise development error `ICU_E_UNINIT` when the function `Icu_Init` has not been called. ] (SRS\_BSW\_00323, SRS\_BSW\_00406)

### 8.3.3 Icu\_SetMode

#### [SWS\_Icu\_00194]

|                           |   |   |
|---------------------------|---|---|
| <b>Service Name</b>       | Icu_SetMode   |   |
| <b>Syntax</b>             | <pre>void Icu_SetMode (     Icu_ModeType Mode )</pre> |   |
| <b>Service ID [hex]</b>   | 0x02  |   |
| <b>Sync/Async</b>         | Synchronous   |   |
| <b>Reentrancy</b>         | Non Reentrant   |   |
| <b>Parameters (in)</b>    | Mode  | ICU_MODE_NORMAL: Normal operation, all used interrupts are enabled according to the notification requests. ICU_MODE_SLEEP: Reduced power mode. In sleep mode only those notifications are available which are configured as wakeup capable. |
| <b>Parameters (inout)</b> | None  |   |
| <b>Parameters (out)</b>   | None  |   |
| <b>Return value</b>       | None  |   |
| <b>Description</b>        | This function sets the ICU mode.                      |   |
| <b>Available via</b>      | Icu.h   |   |

()

**[SWS\_Icu\_00008]** [The function `Icu_SetMode` shall set the operation mode to the given mode parameter. The function `Icu_SetMode` shall set the operation mode to the given mode parameter. This function influences the functionality of the ICU channels. Therefore the mode switching of the module shall be compatible to the overall state of the ECU.] (SRS\_SPAL\_12067, SRS\_SPAL\_12169, SRS\_Icu\_12370)

**[SWS\_Icu\_00302]** [The function `Icu_SetMode` shall be non re-entrant.

This function influences the functionality of the ICU channels. Therefore the mode switching of the module shall be compatible to the overall state of the ECU.] ()

**[SWS\_Icu\_00095]** [The function `Icu_SetMode` shall be pre-compile time configurable by the configuration parameter `IcuSetModeApi`.] (SRS\_BSW\_00410, SRS\_BSW\_00171)

**[SWS\_Icu\_00303]** [The function `Icu_SetMode` shall be configurable ON/OFF by the configuration parameter `IcuSetModeApi.`] ()

**[SWS\_Icu\_00125]** [If development error detection is enabled for the module `Icu` the function `Icu_SetMode` shall check the parameter `Mode` and shall raise the error `ICU_E_PARAM_MODE` if the parameter `Mode` is not within the allowed range set in the configuration.] (SRS\_BSW\_00323)

**[SWS\_Icu\_00133]** [This service can be called during running operations. If so, an ongoing operation that generates interrupts on a wakeup capable channel like e.g. time stamping or edge counting might lead to the ICU module not being able to properly enter sleep mode. This is then a system or ECU configuration issue not a problem of this specification.] (SRS\_SPAL\_12064)

**[SWS\_Icu\_00386]** [If development error detection for the `Icu` module is enabled: This function shall raise development error `ICU_E_UNINIT` when the function `Icu_Init` has not been called. ] (SRS\_BSW\_00323, SRS\_BSW\_00406)

### 8.3.4 Icu\_DisableWakeup

**[SWS\_Icu\_00195]**[

|                           |   |                                       |
|---------------------------|---|---------------------------------------|
| <b>Service Name</b>       | Icu_DisableWakeup   |                                       |
| <b>Syntax</b>             | <pre>void Icu_DisableWakeup (     Icu_ChannelType Channel )</pre>     |                                       |
| <b>Service ID [hex]</b>   | 0x03  |                                       |
| <b>Sync/Async</b>         | Synchronous   |                                       |
| <b>Reentrancy</b>         | Reentrant (limited according to ICU050)                               |                                       |
| <b>Parameters (in)</b>    | Channel   | Numeric identifier of the ICU channel |
| <b>Parameters (inout)</b> | None  |                                       |
| <b>Parameters (out)</b>   | None  |                                       |
| <b>Return value</b>       | None  |                                       |
| <b>Description</b>        | This function disables the wakeup capability of a single ICU channel. |                                       |
| <b>Available via</b>      | Icu.h   |                                       |

]()

**[SWS\_Icu\_00013]** [The function `Icu_DisableWakeup` shall disable the wakeup capability of a single ICU channel.] (SRS\_Icu\_12408)

**[SWS\_Icu\_00305]** [The function `Icu_DisableWakeup` shall disable the wakeup capability of a single ICU channel only for ICU channels configured statically as wakeup capable true.] ()

**[SWS\_Icu\_00304]** [The function `Icu_DisableWakeup` shall be re-entrant.] ()

**[SWS\_Icu\_00096]** [The function `Icu_DisableWakeup` shall be pre compile time configurable by the configuration parameter `IcuDisableWakeupApi`.]  
(SRS\_BSW\_00410, SRS\_BSW\_00171)

**[SWS\_Icu\_00306]** [The function `Icu_DisableWakeup` shall be configurable ON/OFF by the configuration parameter `IcuDisableWakeupApi`.

The settings done by this function are only relevant after the `ICU_MODE_SLEEP` is set.] ()

**[SWS\_Icu\_00024]** [If development error detection is enabled: The function `Icu_DisableWakeup` shall check the parameter `Channel` and shall raise development error `ICU_E_PARAM_CHANNEL` if `Channel` is not within the allowed range set in the configuration.] (SRS\_BSW\_00323)

**[SWS\_Icu\_00059]** [If development error detection is enabled: The function `Icu_DisableWakeup` shall check the parameter `Channel`. The function `Icu_DisableWakeup` shall raise development error `ICU_E_PARAM_CHANNEL` if `Channel` is indexing an ICU channel statically not configured as wakeup capable.  
] ()

**[SWS\_Icu\_00387]** [If development error detection for the Icu module is enabled: This function shall raise development error `ICU_E_UNINIT` when the function `Icu_Init` has not been called. ] (SRS\_BSW\_00323, SRS\_BSW\_00406)

### 8.3.5 Icu\_EnableWakeup

**[SWS\_Icu\_00196]**

|                         |  |
|-------------------------|--|
| <b>Service Name</b>     | <code>Icu_EnableWakeup</code>                                    |
| <b>Syntax</b>           | <pre>void Icu_EnableWakeup (     Icu_ChannelType Channel )</pre> |
| <b>Service ID [hex]</b> | 0x04   |
| <b>Sync/Async</b>       | Synchronous  |
| <b>Reentrancy</b>       | Reentrant (limited according to ICU050)                          |

|                           |  |                                       |
|---------------------------|--|---------------------------------------|
| <b>Parameters (in)</b>    | Channel  | Numeric identifier of the ICU channel |
| <b>Parameters (inout)</b> | None   |                                       |
| <b>Parameters (out)</b>   | None   |                                       |
| <b>Return value</b>       | None   |                                       |
| <b>Description</b>        | This function (re-)enables the wakeup capability of the given ICU channel. |                                       |
| <b>Available via</b>      | Icu.h  |                                       |

]()

**[SWS\_Icu\_00307]** [The function `Icu_EnableWakeup` shall be re-entrant.] ()

**[SWS\_Icu\_00014]** [The function `Icu_EnableWakeup` shall re-enable the wakeup capability of a single ICU channel for the following ICU mode selection(s). This service is only feasible for ICU channels configured as wakeup capable true.

To make the selection effective a call of the function `Icu_SetMode`, requesting the mode `ICU_MODE_SLEEP` is required.] (SRS\_Icu\_12408)

**[SWS\_Icu\_00097]** [The function `Icu_EnableWakeup` shall be pre compile time configurable by configuration parameter `IcuEnableWakeupApi`.] (SRS\_BSW\_00410, SRS\_BSW\_00171)

**[SWS\_Icu\_00308]** [The function `Icu_EnableWakeup` shall be configurable ON/OFF by configuration parameter `IcuEnableWakeupApi`.] ()

**[SWS\_Icu\_00155]** [If development error detection is enabled: The function `Icu_EnableWakeup` shall check the parameter `Channel` and shall raise the error ICU\_E\_PARAM\_CHANNEL if `Channel` is invalid.] ()

**[SWS\_Icu\_00156]** [If development error detection is enabled: The function `Icu_EnableWakeup` shall check the parameter `Channel`. The function `Icu_EnableWakeup` shall raise the error ICU\_E\_PARAM\_CHANNEL if `Channel` is indexing an ICU channel statically not configured as wakeup capable.

] ()

**[SWS\_Icu\_00388]** [If development error detection for the Icu module is enabled: This function shall raise development error ICU\_E\_UNINIT when the function `Icu_Init` has not been called. ] (SRS\_BSW\_00323, SRS\_BSW\_00406)

### 8.3.6 Icu\_CheckWakeup

**[SWS\_Icu\_00358]**

|                           |  |  |
|---------------------------|--|--|
| <b>Service Name</b>       | Icu_CheckWakeup  |  |
| <b>Syntax</b>             | <pre>void Icu_CheckWakeup (     EcuM_WakeupSourceType WakeupSource )</pre>   |  |
| <b>Service ID [hex]</b>   | 0x15   |  |
| <b>Sync/Async</b>         | Synchronous  |  |
| <b>Reentrancy</b>         | Reentrant (limited according to ICU050)  |  |
| <b>Parameters (in)</b>    | Wakeup Source  | Informatin on wakeup source to be checked. The associated ICU channel can be determined from configuration data. |
| <b>Parameters (inout)</b> | None   |  |
| <b>Parameters (out)</b>   | None   |  |
| <b>Return value</b>       | None   |  |
| <b>Description</b>        | Checks if a wakeup capable ICU channel is the source for a wakeup event and calls the ECU state manager service EcuM_SetWakeupEvent in case of a valid ICU channel wakeup event. |  |
| <b>Available via</b>      | Icu.h  |  |

]()

**[SWS\_Icu\_00359]** [The function `Icu_CheckWakeup` shall check if a wakeup capable ICU channel is the source for a wakeup event and call `EcuM_SetWakeupEvent` to indicate a valid timer wakeup event to the ECU State Manager.] ()

**[SWS\_Icu\_00360]** [The function `Icu_CheckWakeup` is only feasible, if `IcuReportWakeupSource` is statically configured available.] ()

**[SWS\_Icu\_00361]** [The ICU module's environment shall only use the re-entrant capability of the function `Icu_CheckWakeup` if the ICU module's environment takes care that there is no simultaneous usage of the same channel.] ()

**[SWS\_Icu\_00362]** [The function `Icu_CheckWakeup` shall be pre compile time configurable On/Off by the configuration parameter: `IcuWakeupFunctionalityApi`] ()

**[SWS\_Icu\_00363]** [If development error detection for the ICU module is enabled: if the function `Icu_CheckWakeup` is called before the ICU module was initialized, the function `Icu_CheckWakeup` shall raise the development error `ICU_E_UNINIT`] ()

### 8.3.7 Icu\_SetActivationCondition

[SWS\_Icu\_00197]

|                           |   |   |

| <b>Available via</b>      | Icu.h  |  |

()

### 8.3.26 Icu\_EnableNotificationAsync

#### [SWS\_Icu\_91003]

|                           |   |  |
|---------------------------|---|--|
| <b>Service Name</b>       | Icu_EnableNotificationAsync   |  |
| <b>Syntax</b>             | <pre>void Icu_EnableNotificationAsync (     Icu_ChannelType Channel )</pre> |  |
| <b>Service ID [hex]</b>   | 0x19  |  |
| <b>Sync/Async</b>         | Asynchronous  |  |
| <b>Reentrancy</b>         | Non Reentrant Reentrant (limited according to ICU050)                       |  |
| <b>Parameters (in)</b>    | Channel   | Numeric identifier of the ICU channel. |
| <b>Parameters (inout)</b> | None  |  |
| <b>Parameters (out)</b>   | None  |  |
| <b>Return value</b>       | None  |  |
| <b>Description</b>        | This function enables the notification on the given channel.                |  |
| <b>Available via</b>      | Icu.h   |  |

l()

## 8.4 Callback notifications

Since the ICU is a driver module, it doesn't provide any callback functions for lower layer modules.

## 8.5 Scheduled functions

None.

## 8.6 Expected Interfaces

In this chapter, all interfaces required from other modules are listed.

### 8.6.1 Mandatory Interfaces

This chapter defines all interfaces, which are required, in order to fulfill the core functionality of the module.

[SWS\_Icu\_91001]

| <i>API Function</i>         | <i>Header File</i> | <i>Description</i>  |
|-----------------------------|--------------------|---|
| Det_Report-<br>RuntimeError | Det.h              | Service to report runtime errors. If a callout has been configured then this callout shall be called. |

l()

### 8.6.2 Optional Interfaces

This chapter defines all interfaces which are required to fulfil an optional functionality of the module.

[SWS\_Icu\_00213]

| <i>API Function</i>        | <i>Header File</i>   | <i>Description</i>   |
|----------------------------|----------------------|--|
| Det_Report-<br>Error       | Det.h                | Service to report development errors.  |
| EcuM_-<br>Check-<br>Wakeup | EcuM_<br>Externals.h | This callout is called by the EcuM to poll a wakeup source. It shall also be called by the ISR of a wakeup source to set up the PLL and check other wakeup sources that may be connected to the same |

|                       |        |                        |
|-----------------------|--------|------------------------|
|                       |        | interrupt.             |
| EcuM_Set-Wakeup-Event | EcuM.h | Sets the wakeup event. |

]()

The service `EcuM_CheckWakeup` will be called if all of the following are true:

- **[SWS\_Icu\_00055]** [The static configuration parameter `IcuReportWakeupSource` is set to “ON” ] (SRS\_SPAL\_12069, SRS\_BSW\_00410)
- **[SWS\_Icu\_00056]** [The module is in mode `ICU_MODE_SLEEP`] (SRS\_SPAL\_12069)
- **[SWS\_Icu\_00057]** [A wakeup event occurs on a wakeup capable ICU channel.] (SRS\_SPAL\_12069)

**[SWS\_Icu\_00228]** [`EcuM_CheckWakeup` shall be called within the Interrupt Service Routine servicing the ICU channel wakeup event on wakeup-capable channel.] ()

**[SWS\_Icu\_00229]** [The ISR’s, providing the wakeup events, shall be responsible for resetting the interrupt flags if required by hardware.] ()

### 8.6.3 Configurable interfaces

In this chapter all interfaces are listed where the target function could be configured. The target function is usually a call-back function. The names of these kinds of interfaces are not fixed because they are configurable.

**[SWS\_Icu\_00119]** [The ISRs shall reset the interrupt flags (if needed by hardware) and call the corresponding notification functions.] (SRS\_SPAL\_12129)

**[SWS\_Icu\_00018]** [The Icu notification functions shall be configurable as function pointers within the initialization data structure (`Icu_ConfigType`).] (SRS\_SPAL\_12056)

**[SWS\_Icu\_00187]** [The Icu module’s notification functions shall have no parameters and no return value.] (SRS\_BSW\_00359)

**[SWS\_Icu\_00214]**[

|                     |                                  |
|---------------------|----------------------------------|
| <b>Service Name</b> | Icu_SignalNotification_<Channel> |
|---------------------|----------------------------------|

|                           |  |
|---------------------------|--|
| <b>Syntax</b>             | <code>void Icu_SignalNotification_&lt;Channel&gt; (<br/>    void<br/>)</code>  |
| <b>Sync/Async</b>         | Synchronous  |
| <b>Reentrancy</b>         | Reentrancy of interface not relevant for this module. (in general it is in this case not reentrant).   |
| <b>Parameters (in)</b>    | None   |
| <b>Parameters (inout)</b> | None   |
| <b>Parameters (out)</b>   | None   |
| <b>Return value</b>       | None   |
| <b>Description</b>        | According to the last call of <code>Icu_EnableNotification</code> , this notification function to be called if the requested signal edge (rising / falling / both edges) occurs (once per edge). |
| <b>Available via</b>      | <code>Icu_Externals.h</code>   |

()

**[SWS\_Icu\_00348]** [Re-entrancy of operation

`Icu_SignalNotification_<Channel>` is not relevant for this module (In general it is in this case not re-entrant).] ()

**[SWS\_Icu\_00021]** [According to the last call of `Icu_EnableNotification()`, the Icu module shall call the notification function `Icu_SignalNotification_<Channel>` if the requested signal edge (rising / falling / both edges) occurs (once per edge).]  
(SRS\_SPAL\_00157, SRS\_Icu\_12369)

**[SWS\_Icu\_00044]** [Only those edge notifications shall be provided, which are supported by hardware.] (SRS\_Icu\_12305)

**[SWS\_Icu\_00042]** [After a call of `Icu_DisableNotification`, the Icu module shall not call the notification function `Icu_SignalNotification_<Channel>`.] (SRS\_Icu\_12305)

**[SWS\_Icu\_00215]**

|                     |  |
|---------------------|--|
| <b>Service Name</b> | <code>Icu_TimestampNotification_&lt;Channel&gt;</code>                                   |
| <b>Syntax</b>       | <code>void Icu_TimestampNotification_&lt;Channel&gt; (<br/>    void<br/>)</code>         |
| <b>Sync/Async</b>   | Synchronous  |
| <b>Reentrancy</b>   | Reentrancy of interface not relevant for this module. (in general it is in this case not |

|                           |   |
|---------------------------|---|
|                           | reentrant).   |
| <b>Parameters (in)</b>    | None  |
| <b>Parameters (inout)</b> | None  |
| <b>Parameters (out)</b>   | None  |
| <b>Return value</b>       | None  |
| <b>Description</b>        | This notification to be called if the number of requested timestamps (Notification interval > 0) are acquired and if the notification has been enabled by the call of Icu_EnableNotification(). |
| <b>Available via</b>      | Icu_Externals.h   |

](SRS\_Icu\_12444)

**[SWS\_Icu\_00349]** [Re-entrancy of the Icu\_TimestampNotification\_<Channel> is not relevant for this module (in general it is in this case not re-entrant).] ()

**[SWS\_Icu\_00216]** [The Icu module shall call the notification Icu\_TimestampNotification\_<Channel> if the number of requested timestamps (Notification interval > 0) are acquired and if the notification has been enabled by the call of Icu\_EnableNotification().] ()

**[SWS\_Icu\_00217]** [After a call of Icu\_DisableNotification the Icu module shall NOT call the notification Icu\_TimestampNotification\_<Channel>.] ()

**[SWS\_Icu\_00218]** [The Icu module's notification Icu\_TimestampNotification\_<Channel> depends on pre-processor switch IcuTimestampApi] ()

## 9.4 Icu\_SetMode

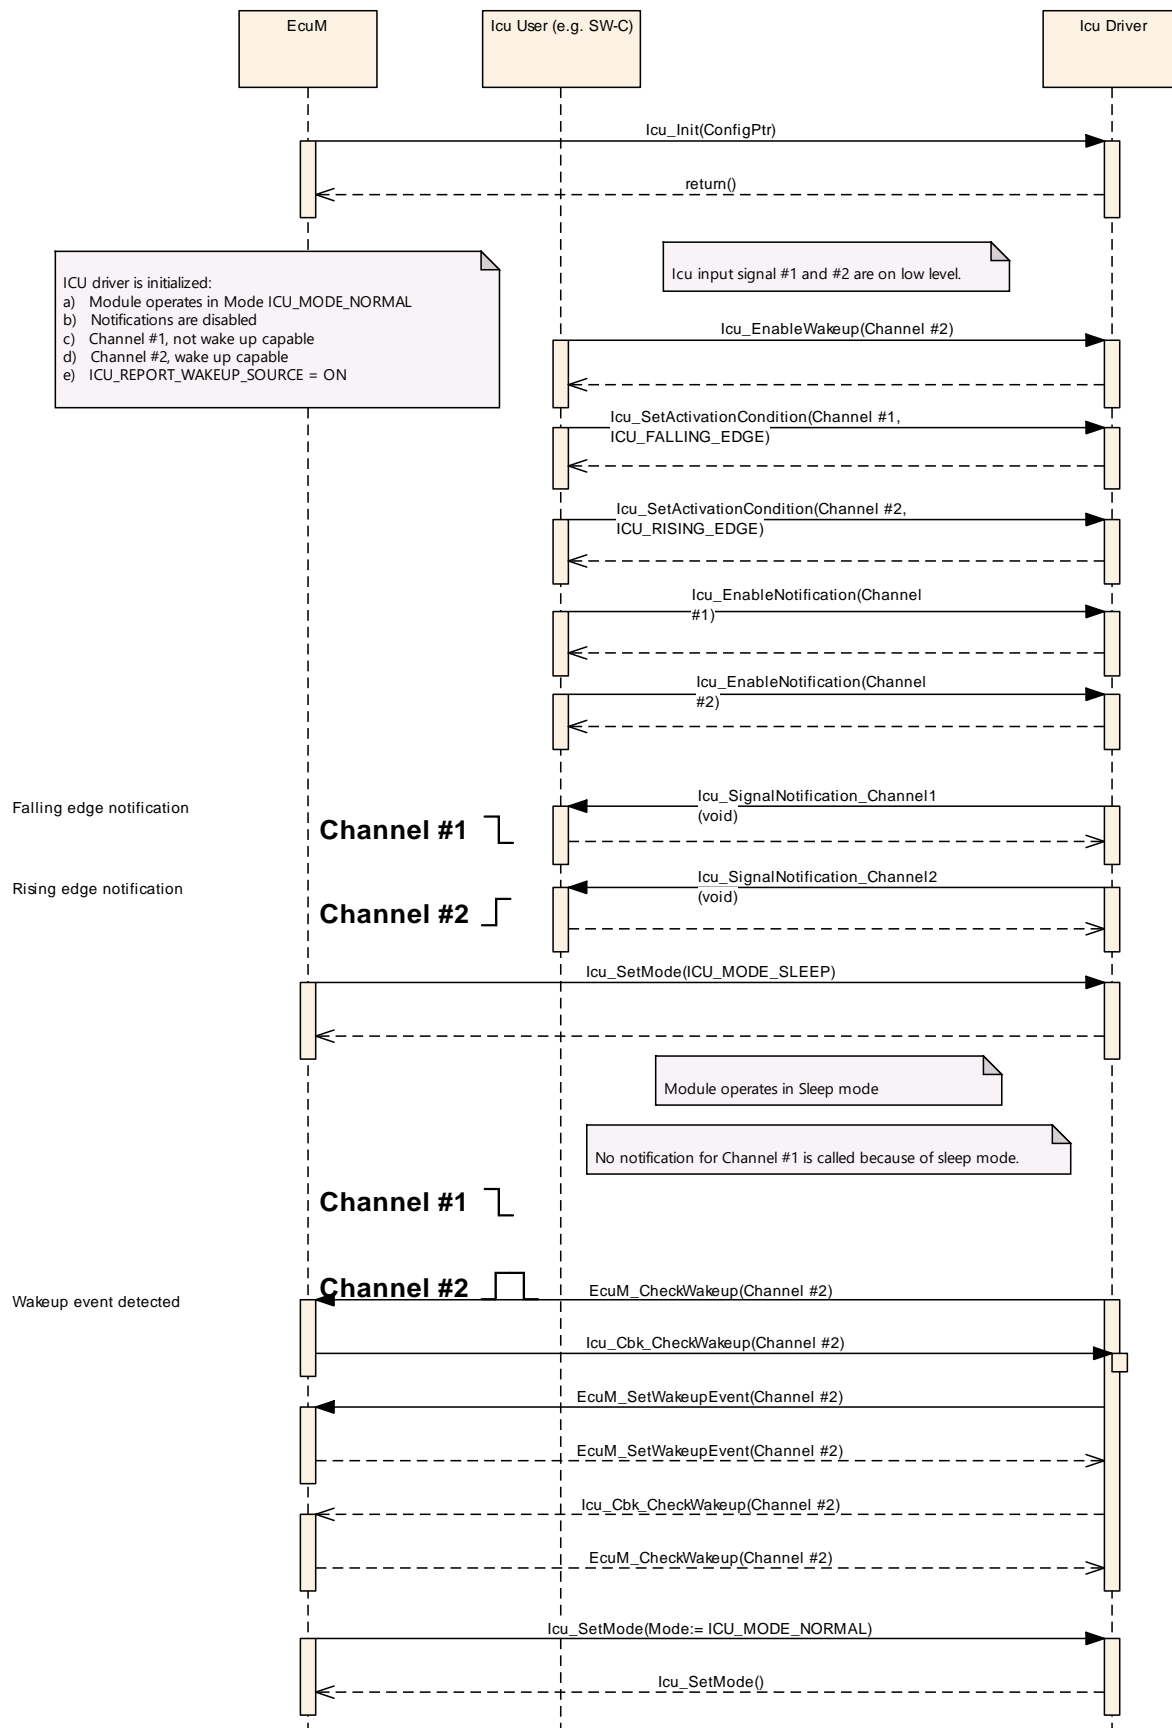

Figure 9.3: Enabled notifications in SLEEP mode

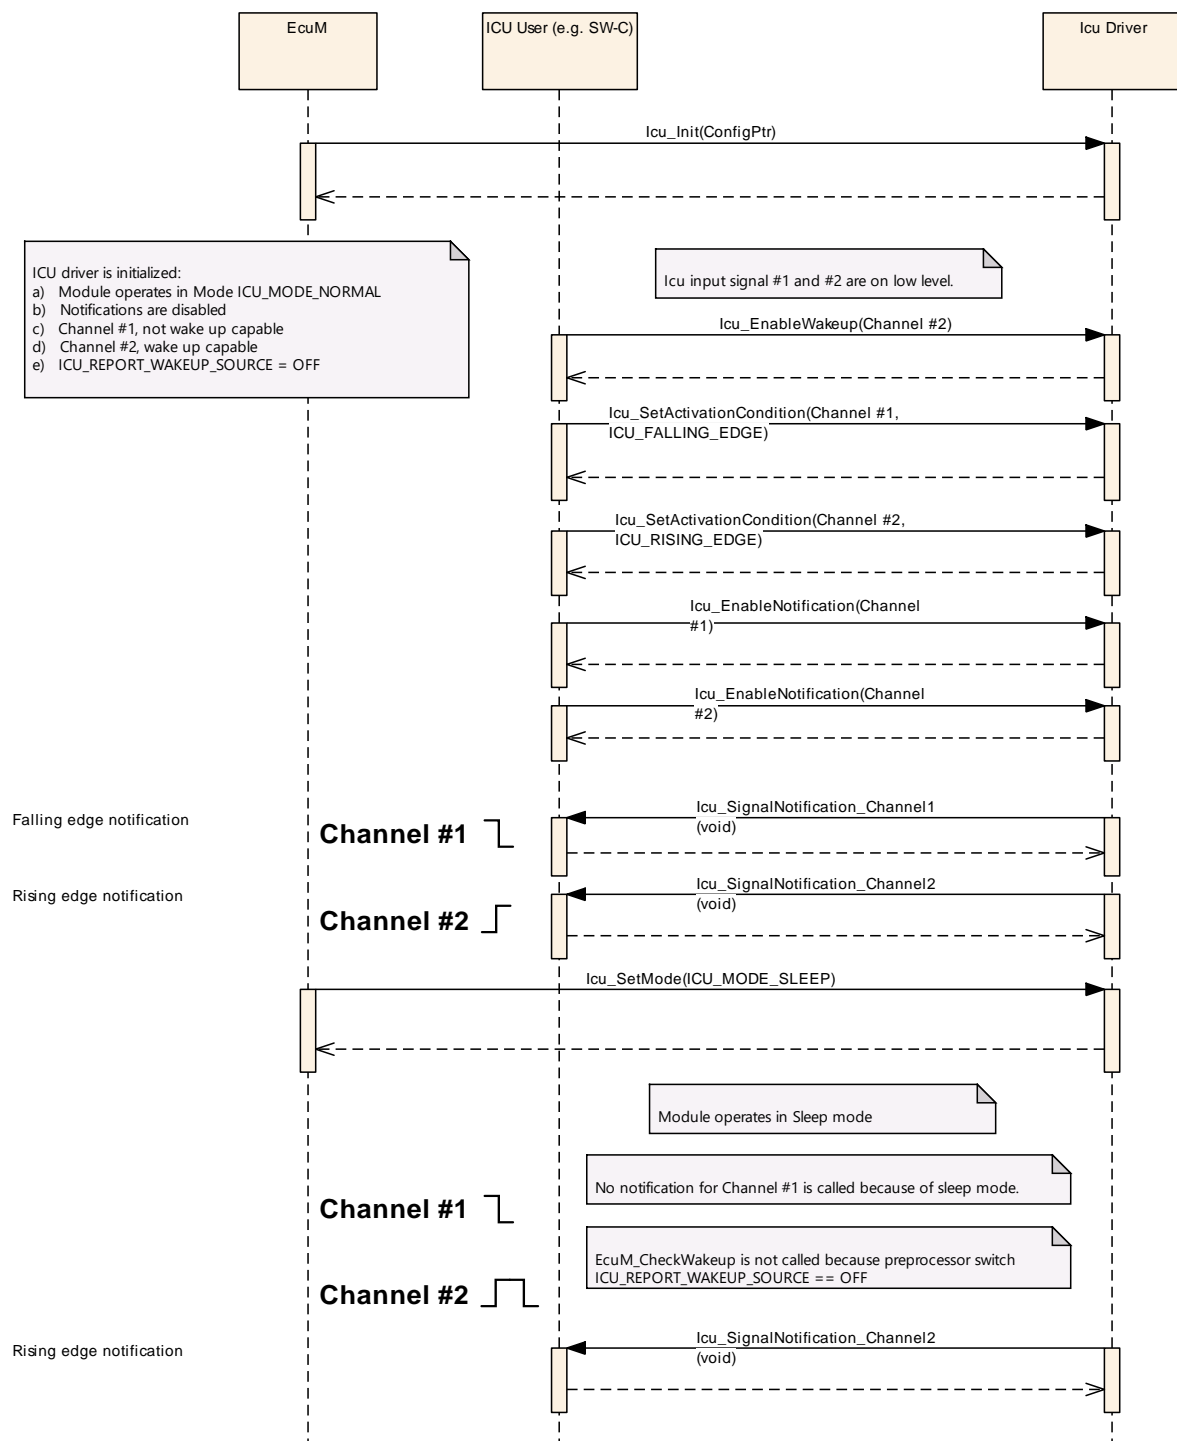

Figure 9.4: Disabled reporting of wakeup sources in SLEEP mode

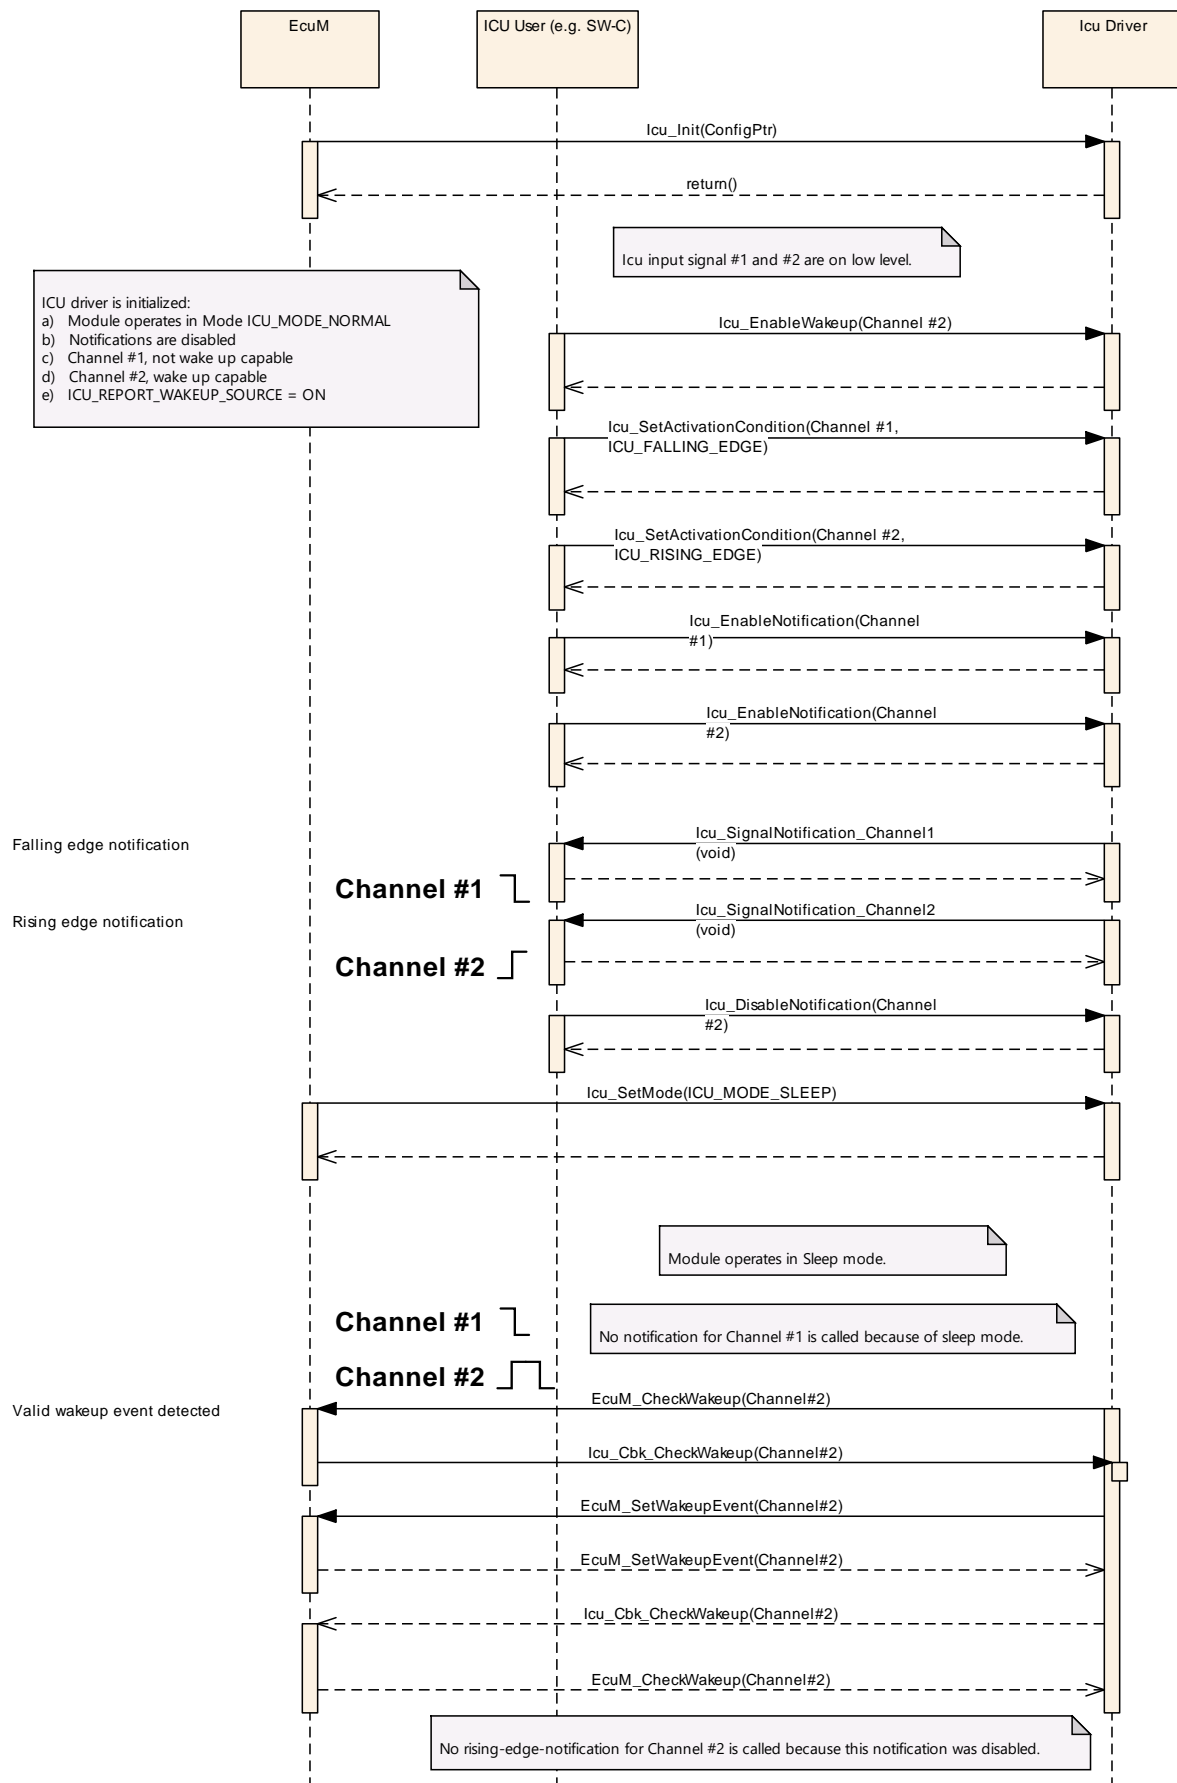

Figure 9.5: Disabled edge notification in SLEEP mode

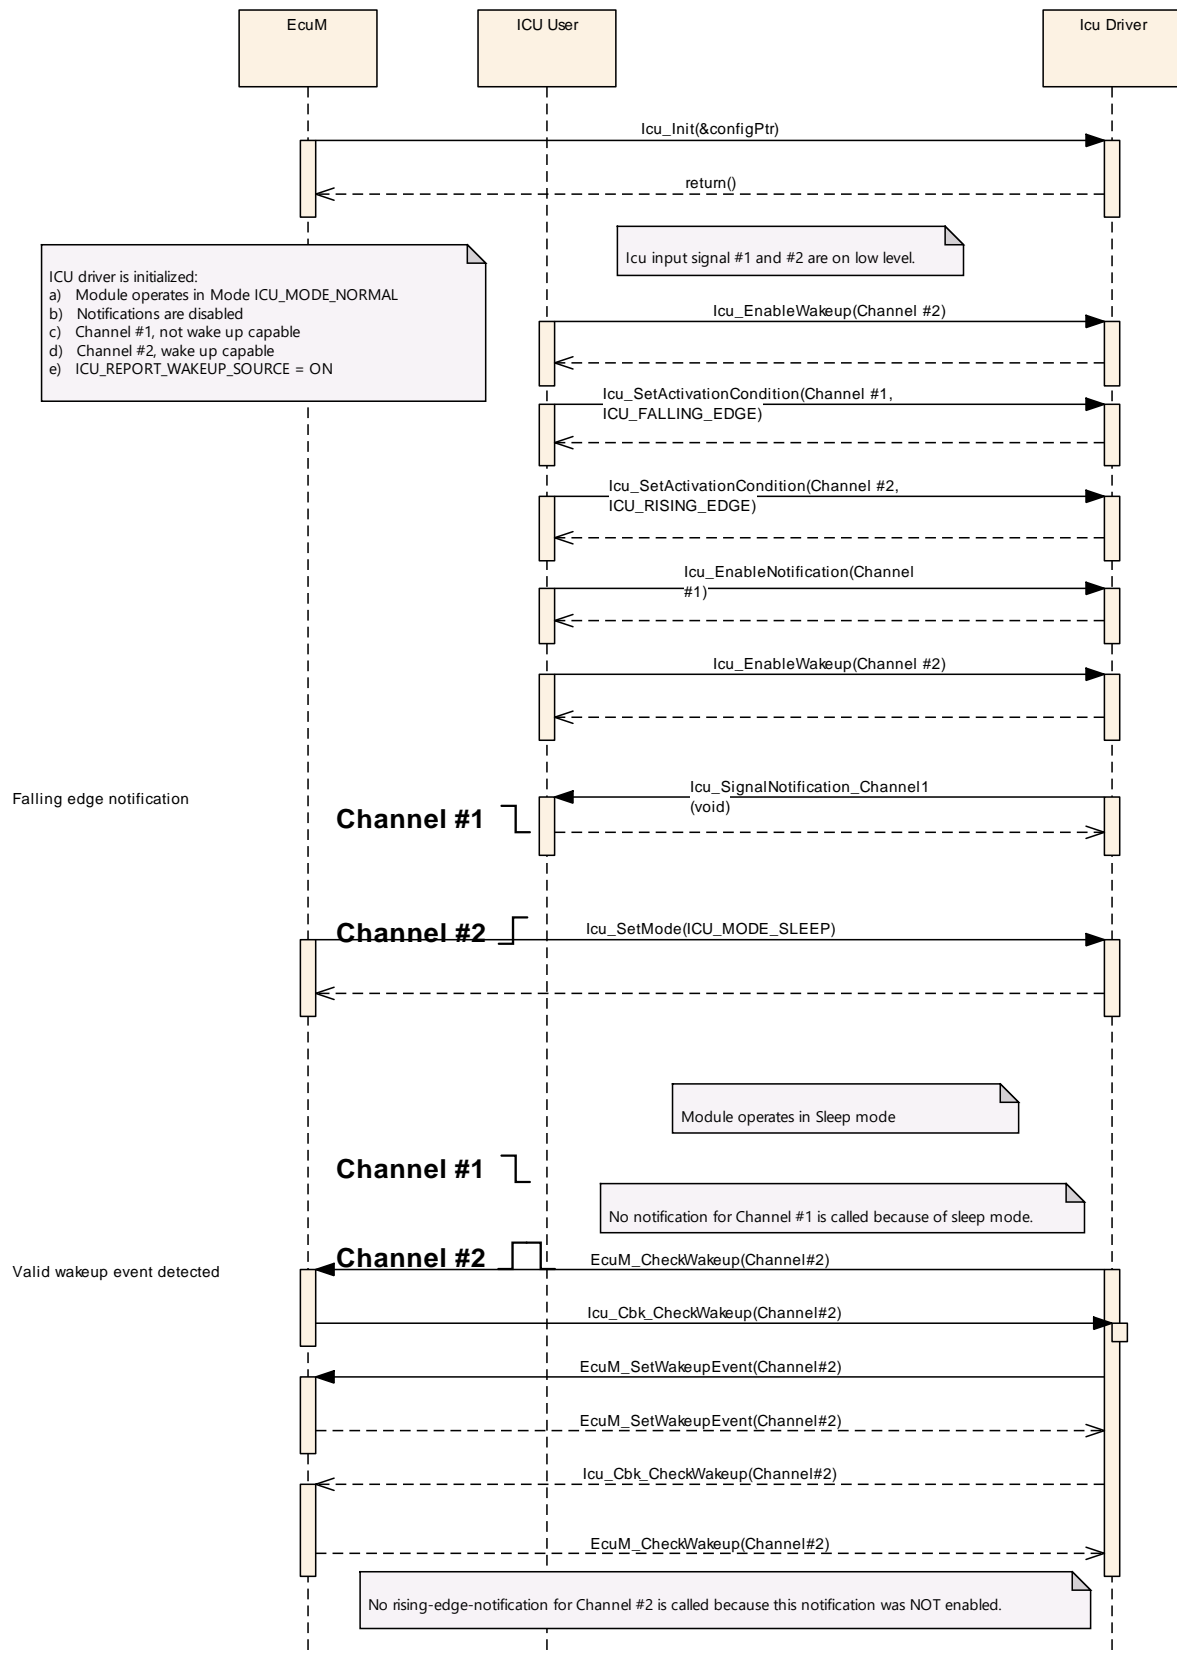

Figure 9.6: Un-Enabled reporting of notifications in SLEEP mode

## 9.5 Icu\_DisableWakeup

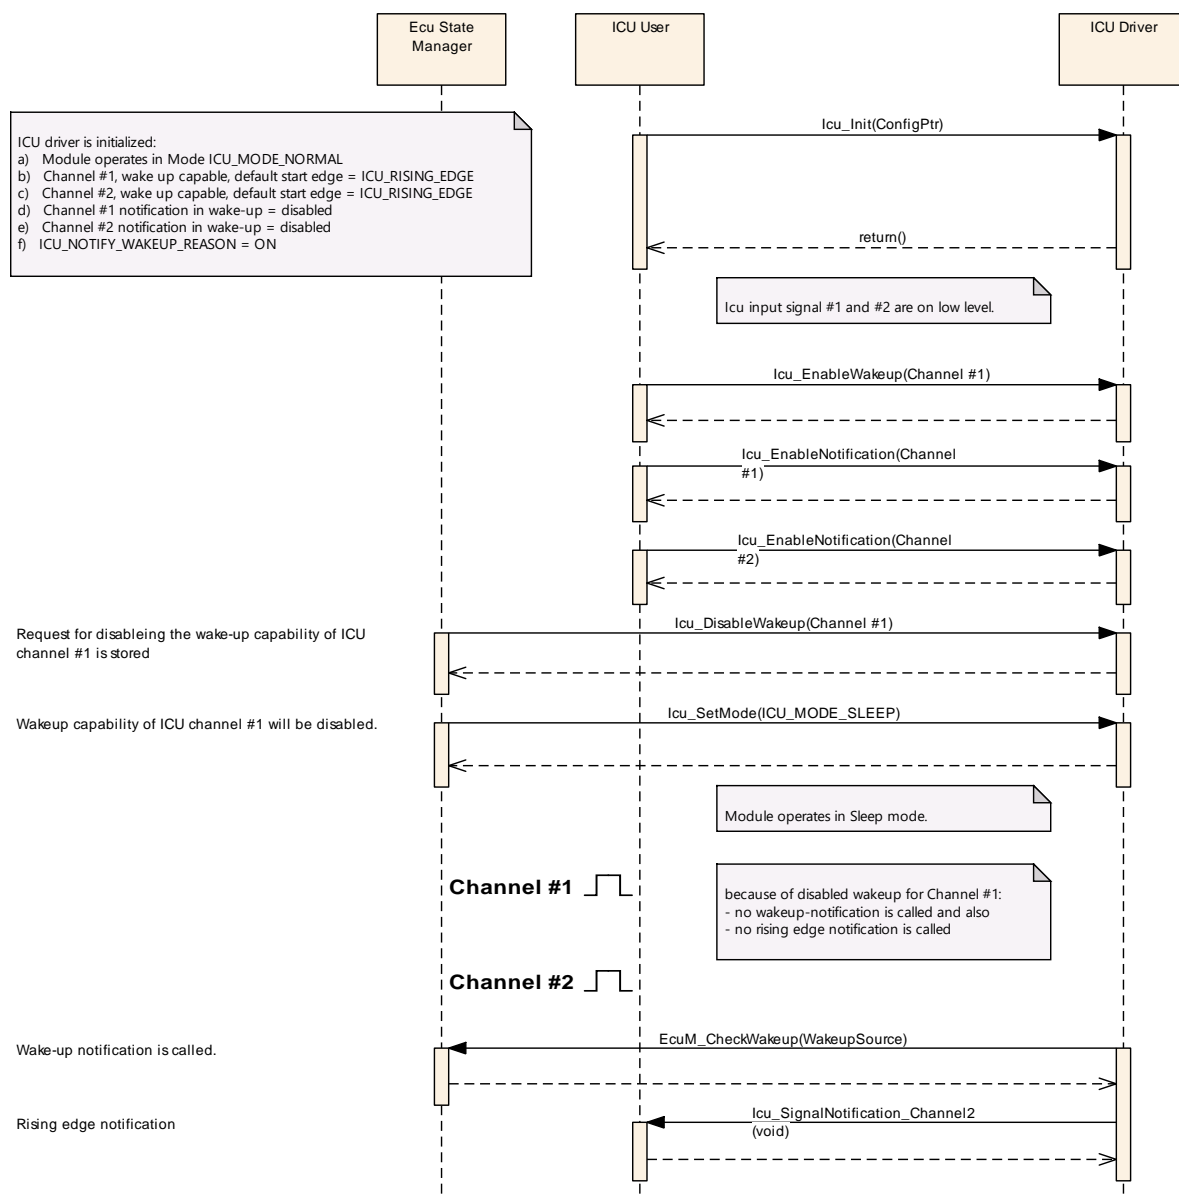

Figure 9.7: Disabling of wakeup-capabilities

## 9.6 Icu\_EnableWakeup

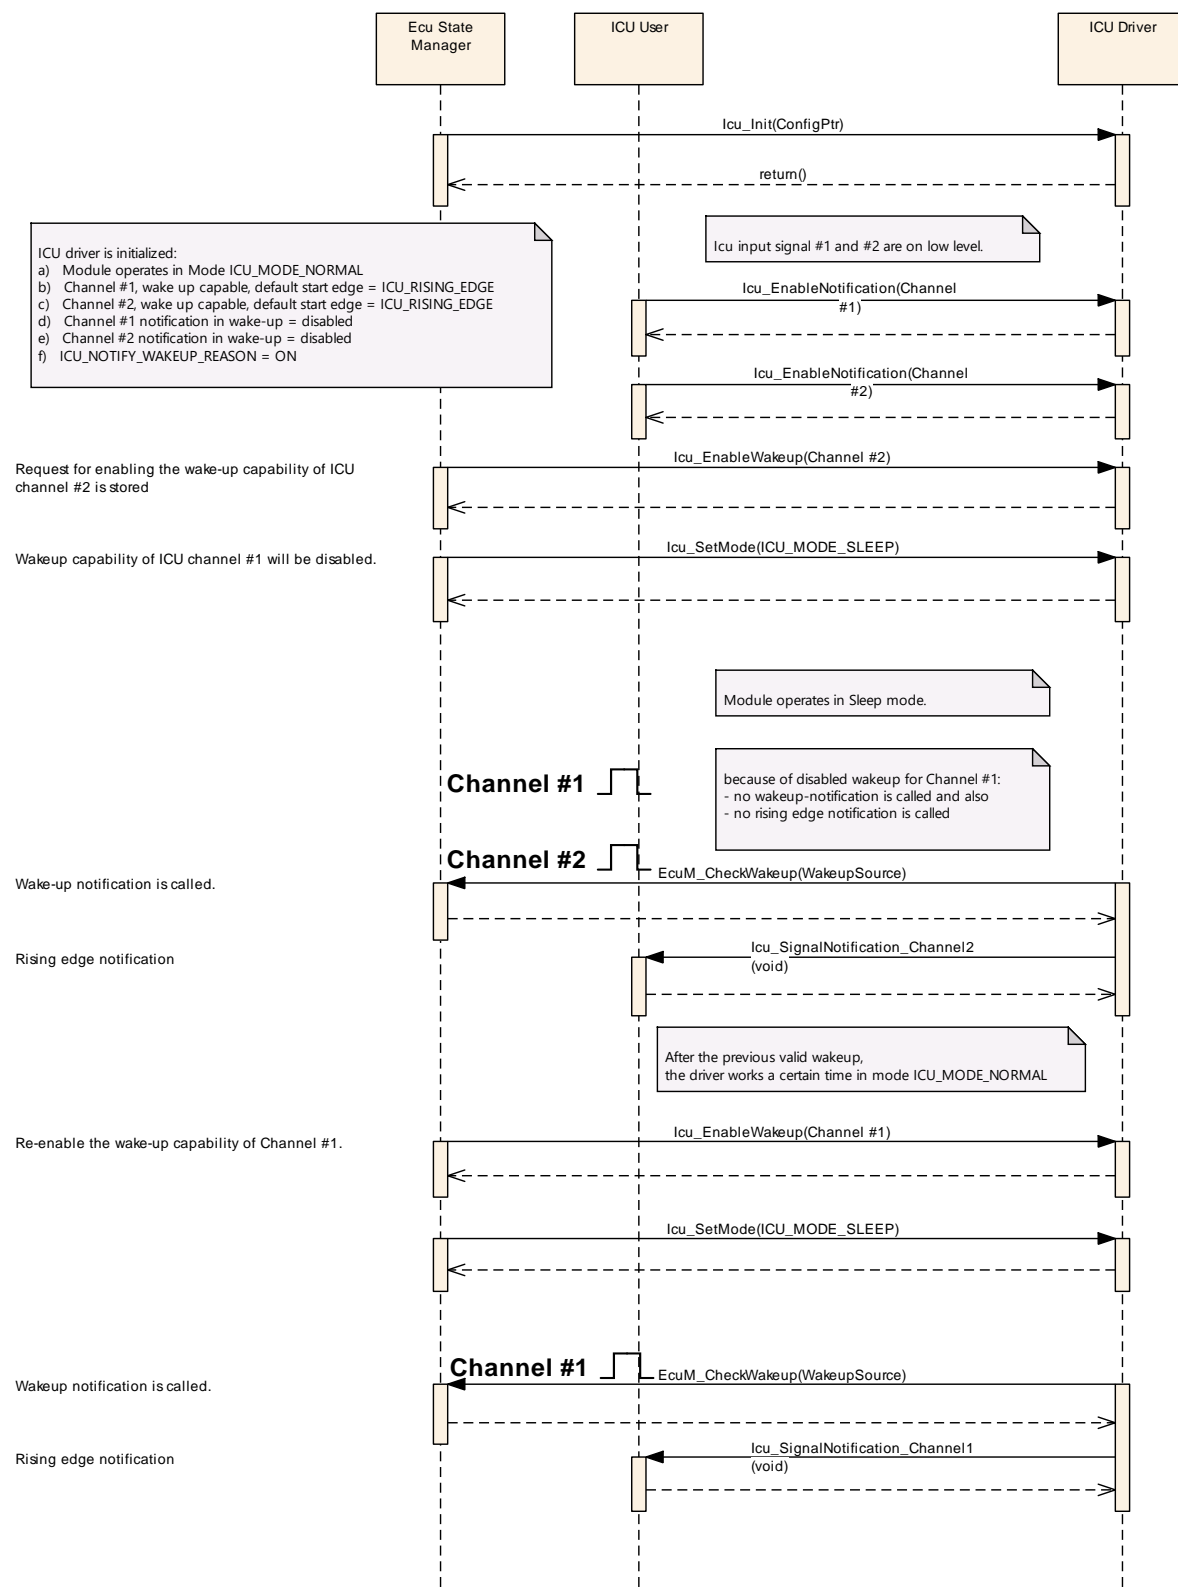

Figure 9.8: Enabling of wakeup-capabilities

## 9.7 Icu\_SetActivationCondition

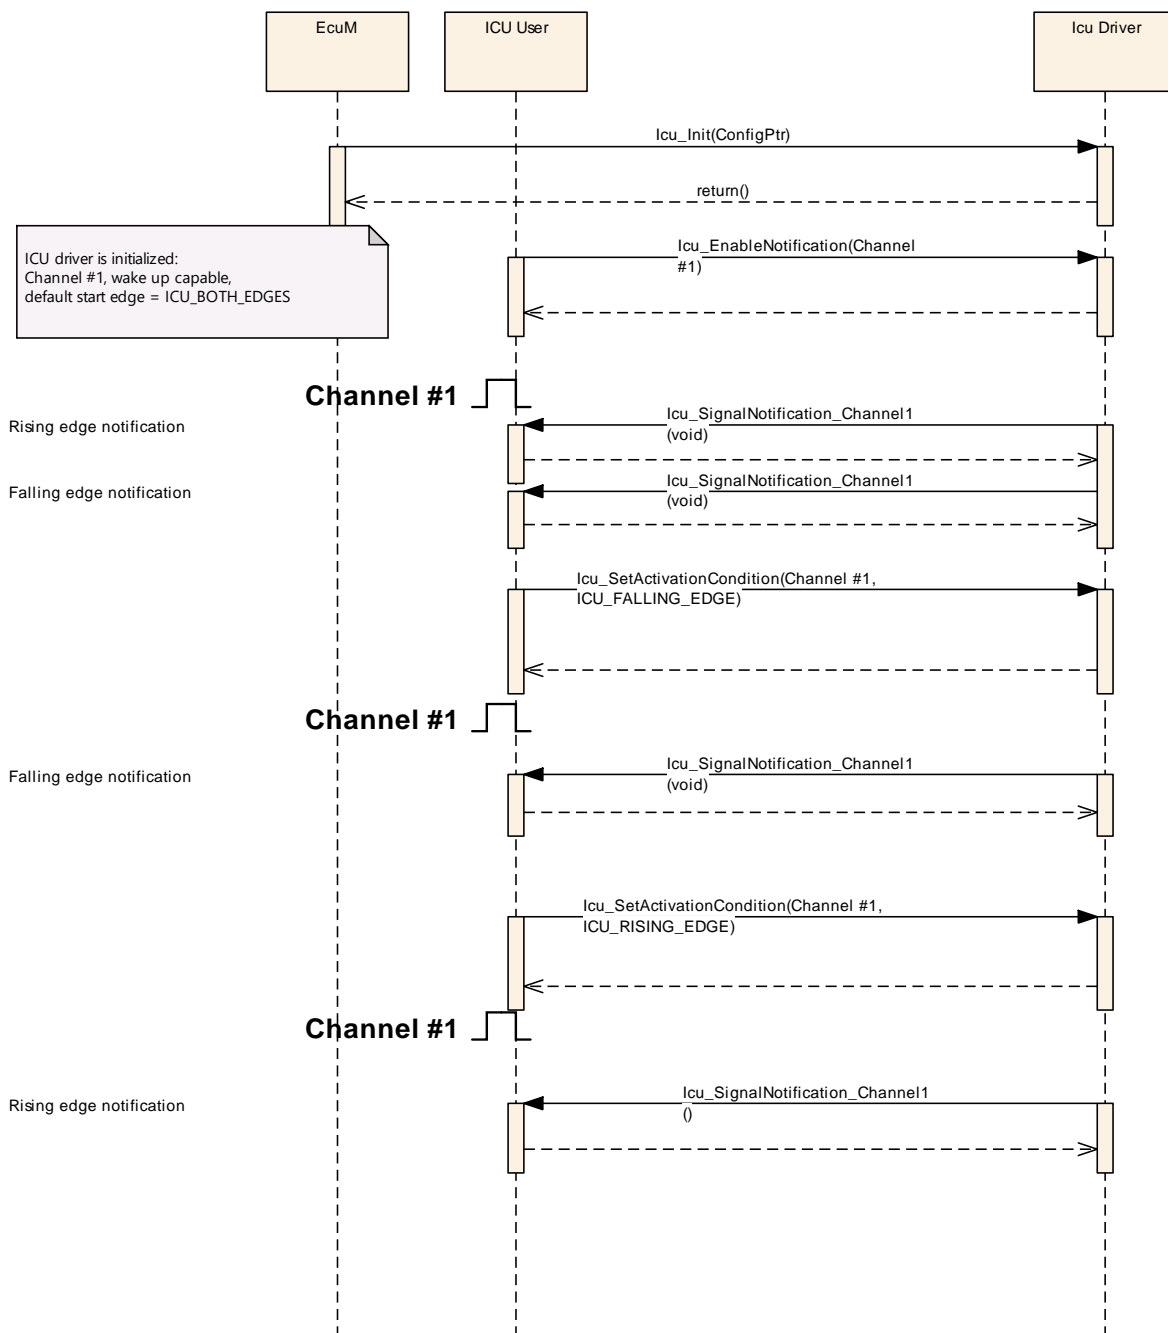

Figure 9.9: Setting up the activation condition for a channel

## 9.8 Icu\_DisableNotification

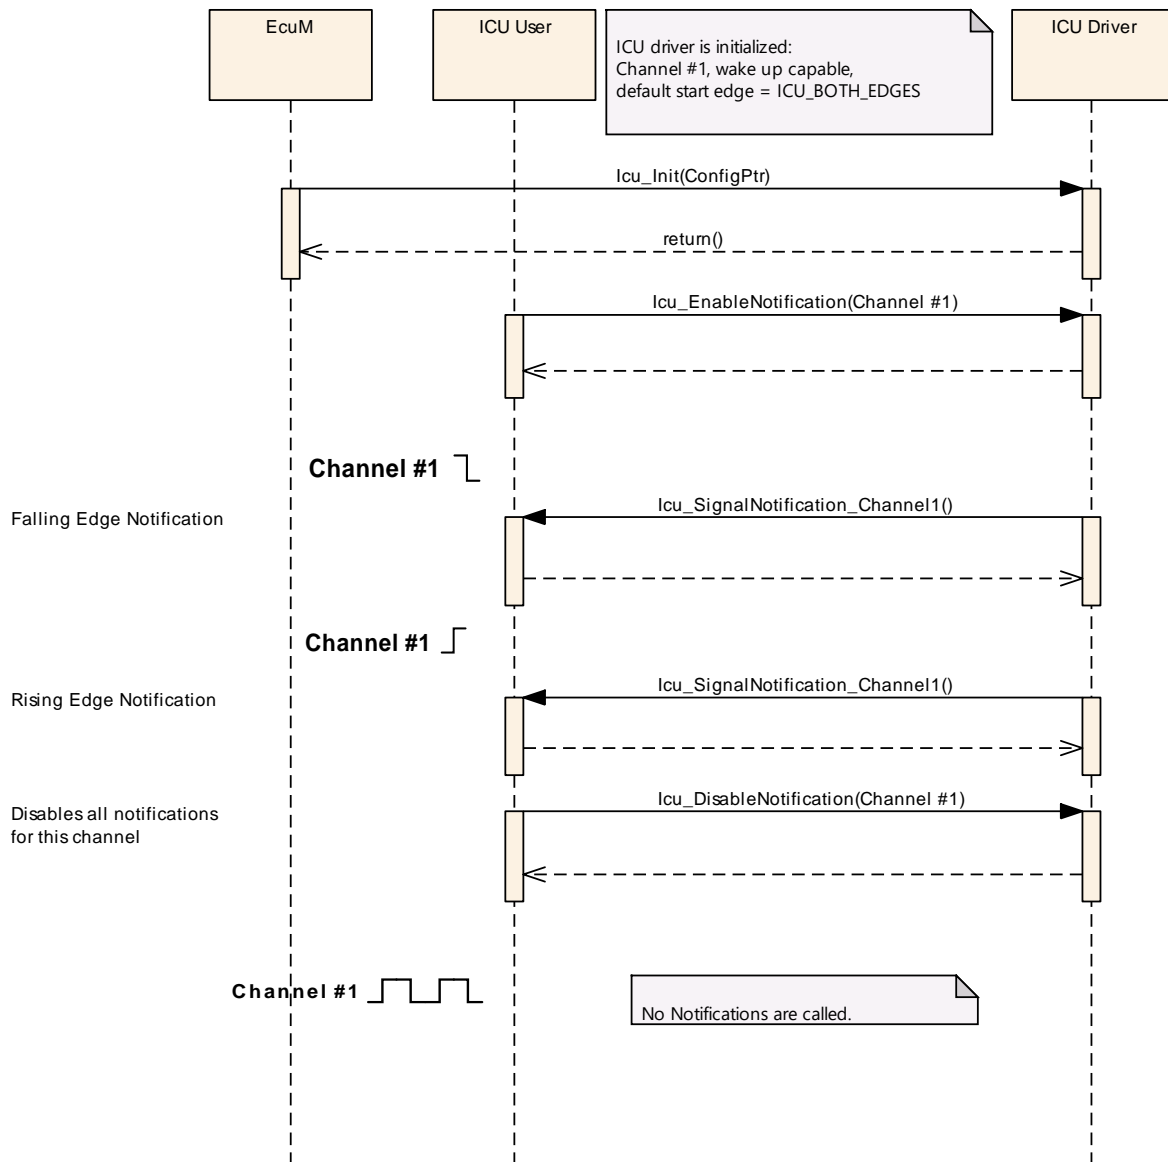

Figure 9.10: Disabling of the notification for a channel

## 9.9 Icu\_EnableNotification

Figure 9.11: Enabling of the edge-notification for a channel

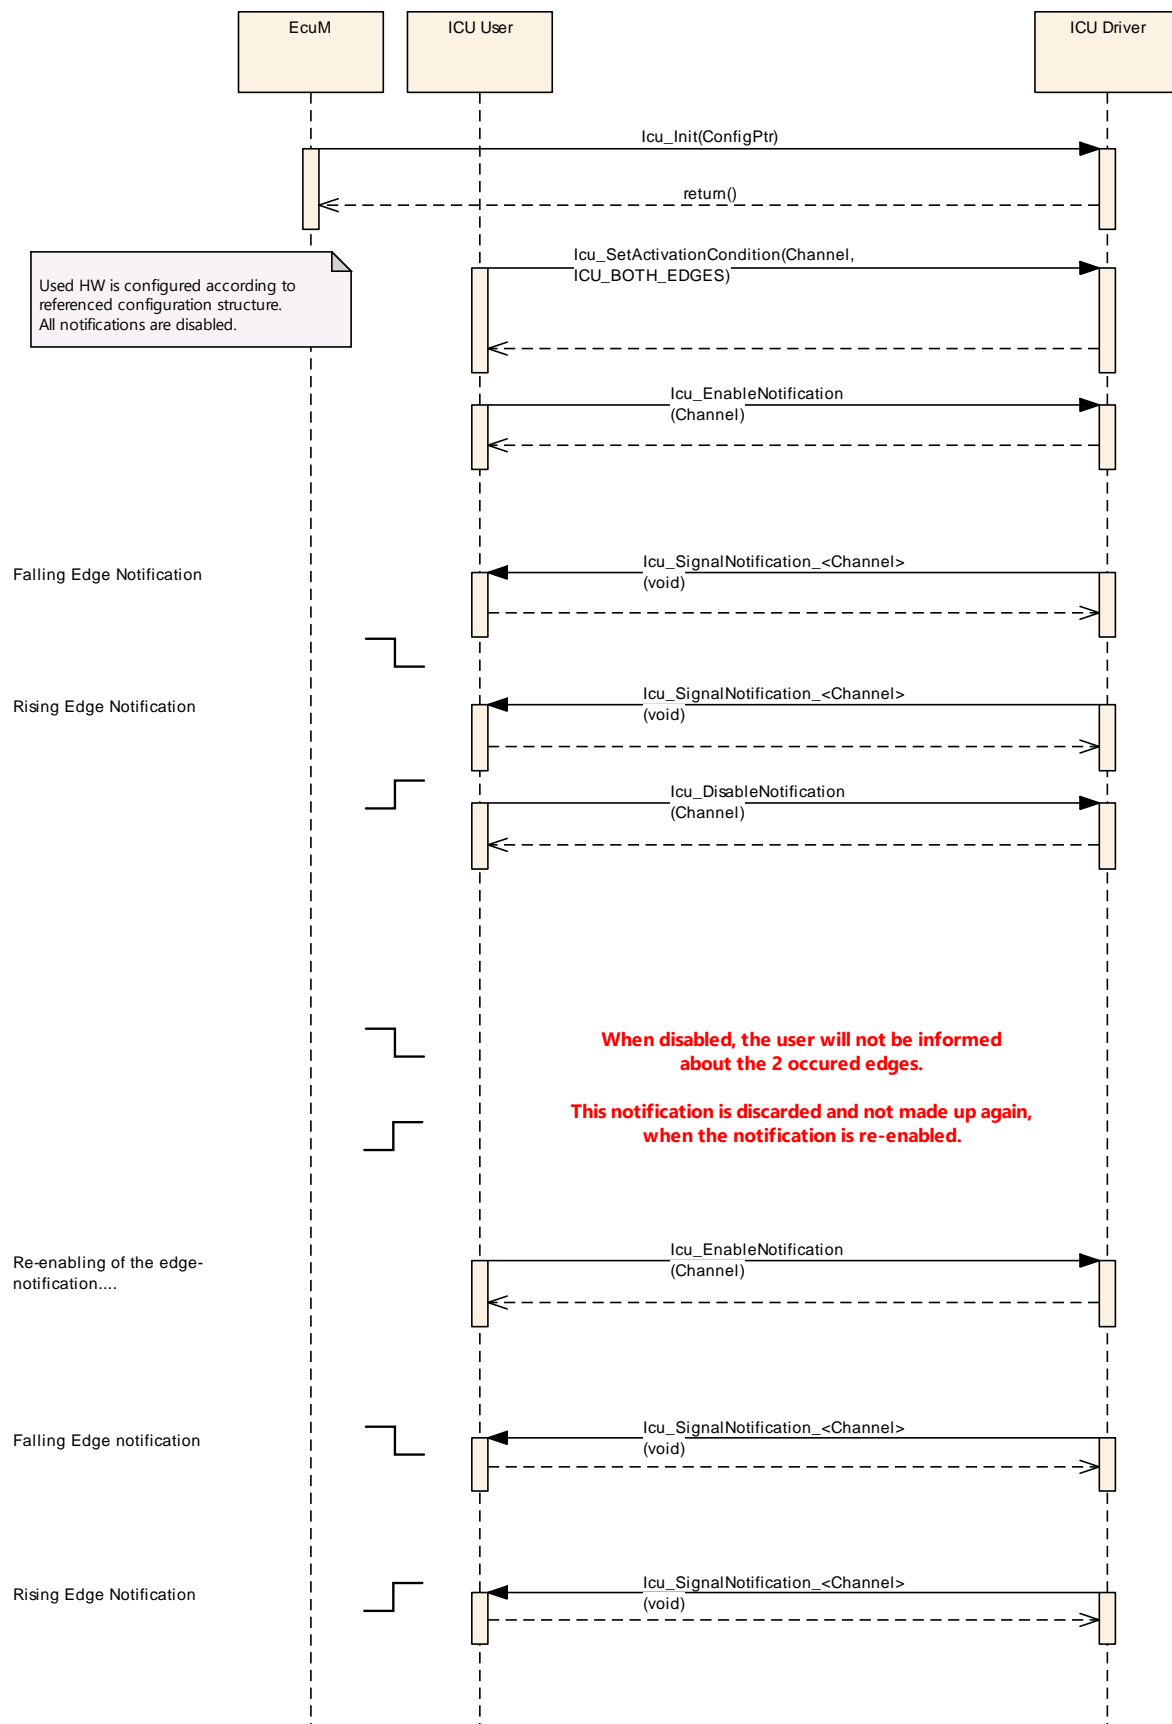

Figure 9.12: Re-enabling of the notification for a channel

## 9.10 Icu\_GetInputState

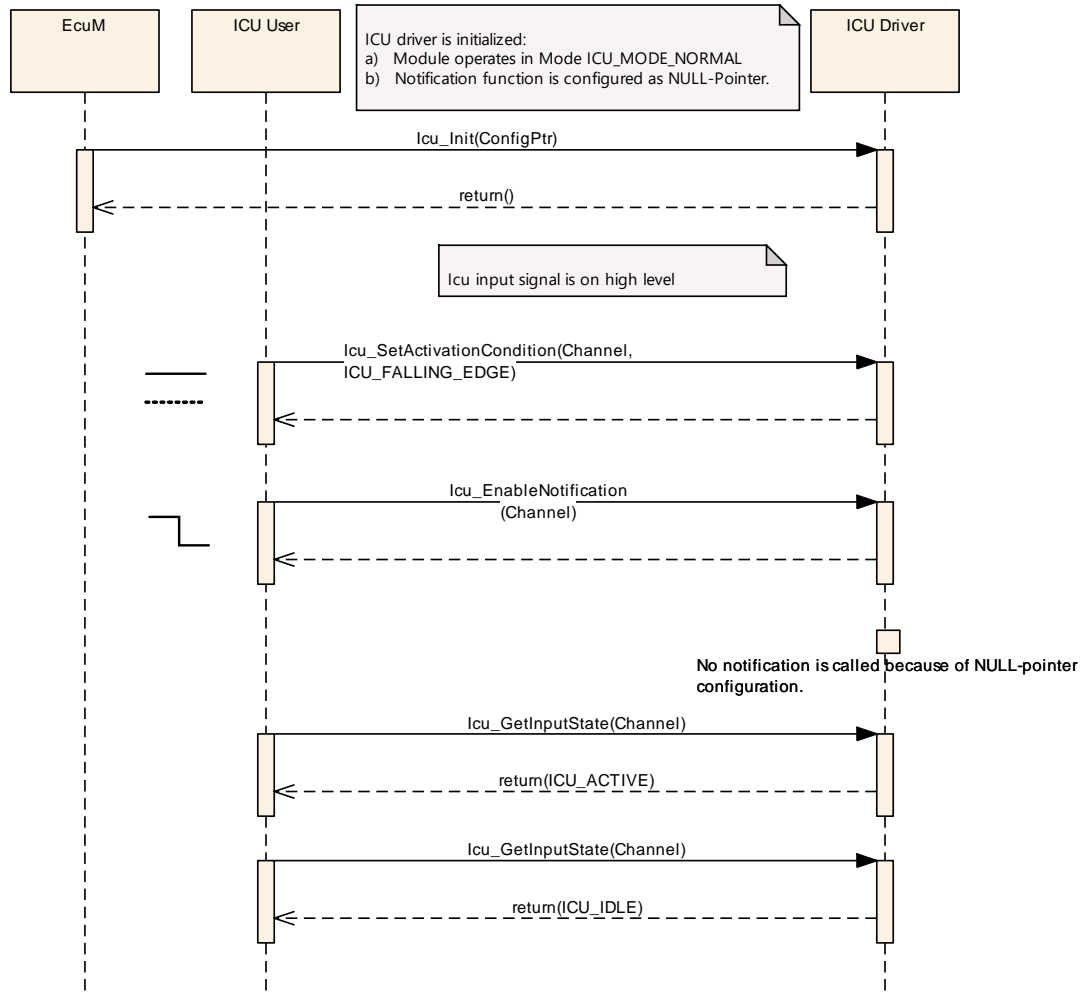

Figure 9.13: Polling of the channel status

## 9.11 Icu Timestamping

The following figure shall show the interactions between the different timestamp API-services.

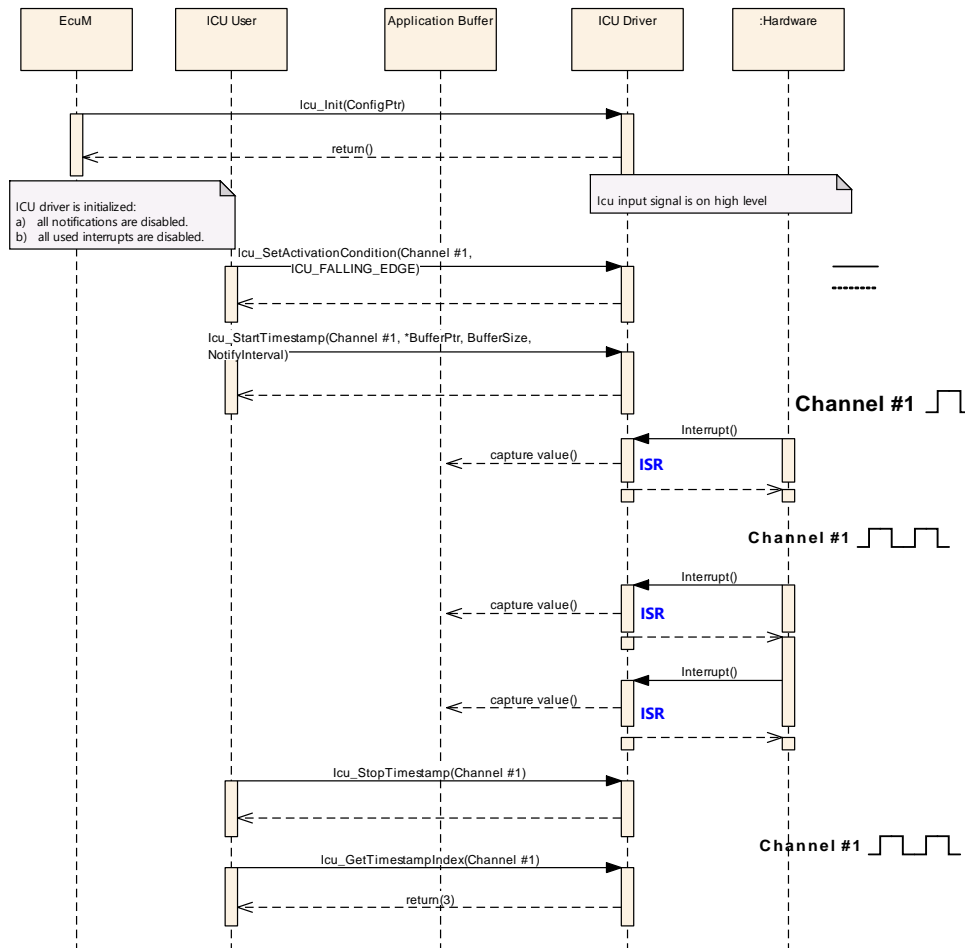

Figure 9.14: Overview of the timestamping functionality of the ICU driver

The Timestamping in general is shown in the following figure:

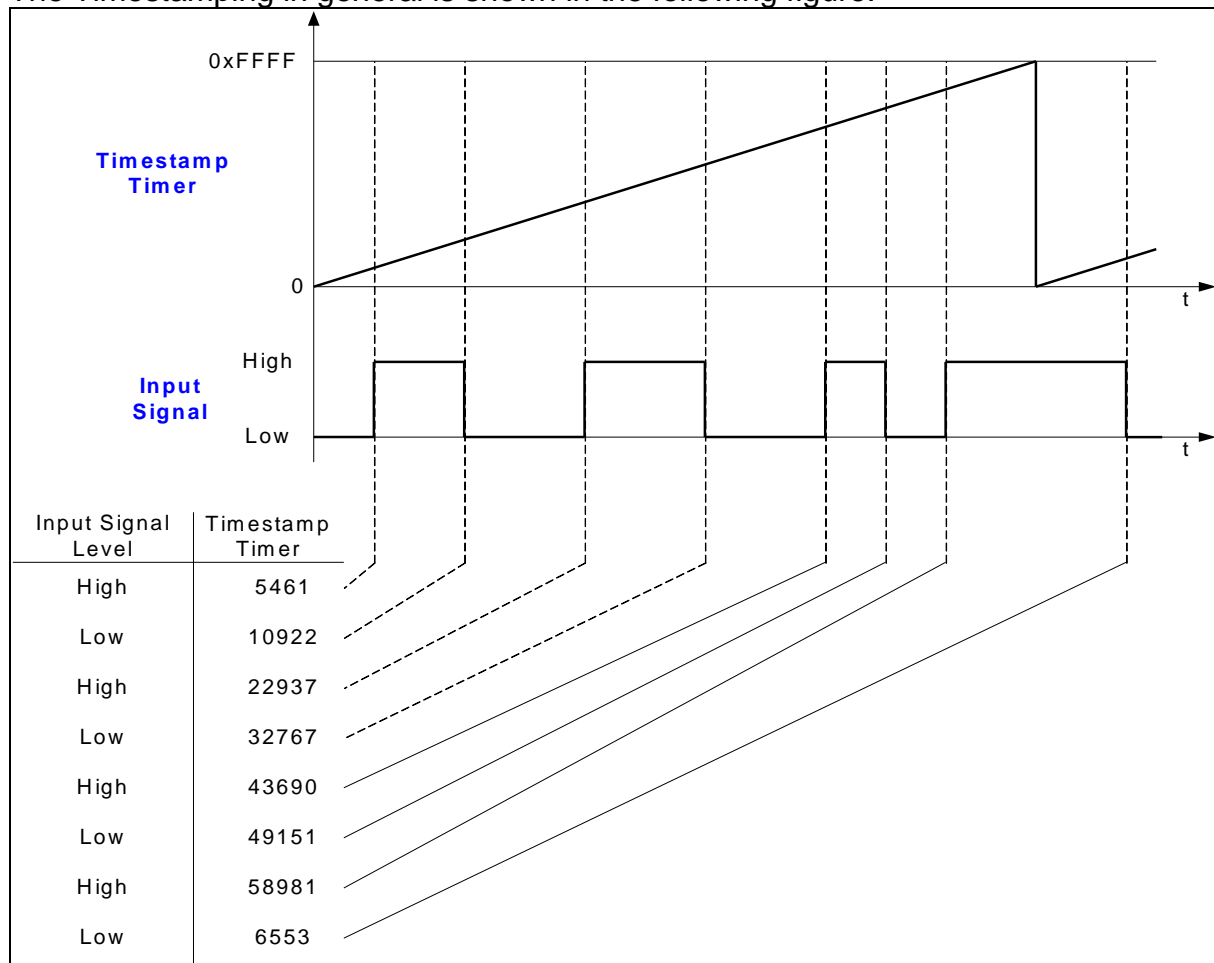

Figure 9.15: Timestamping overview

## 9.12 Icu Edge Counting

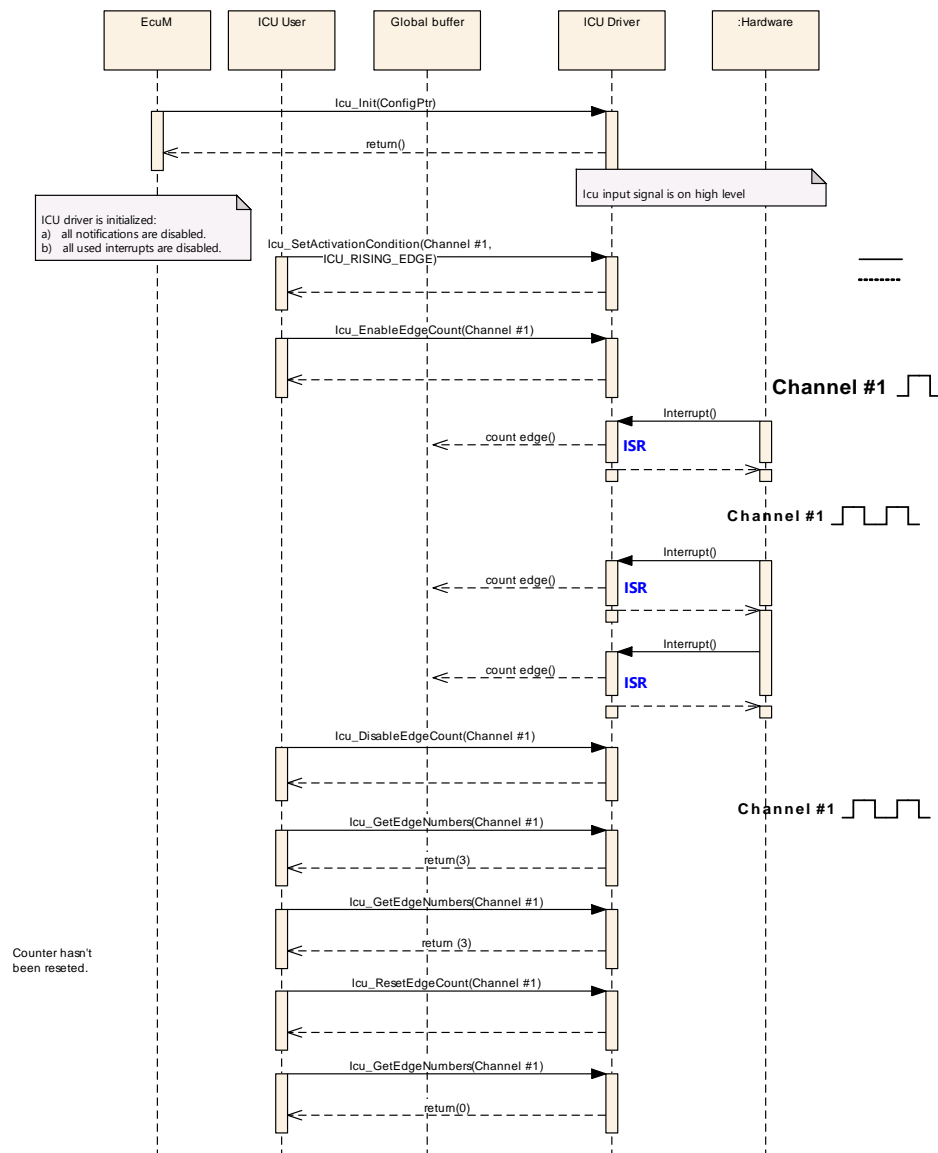

Figure 9.16: Inquire the number of counted edges

### 9.13 Icu\_GetTimeElapsed

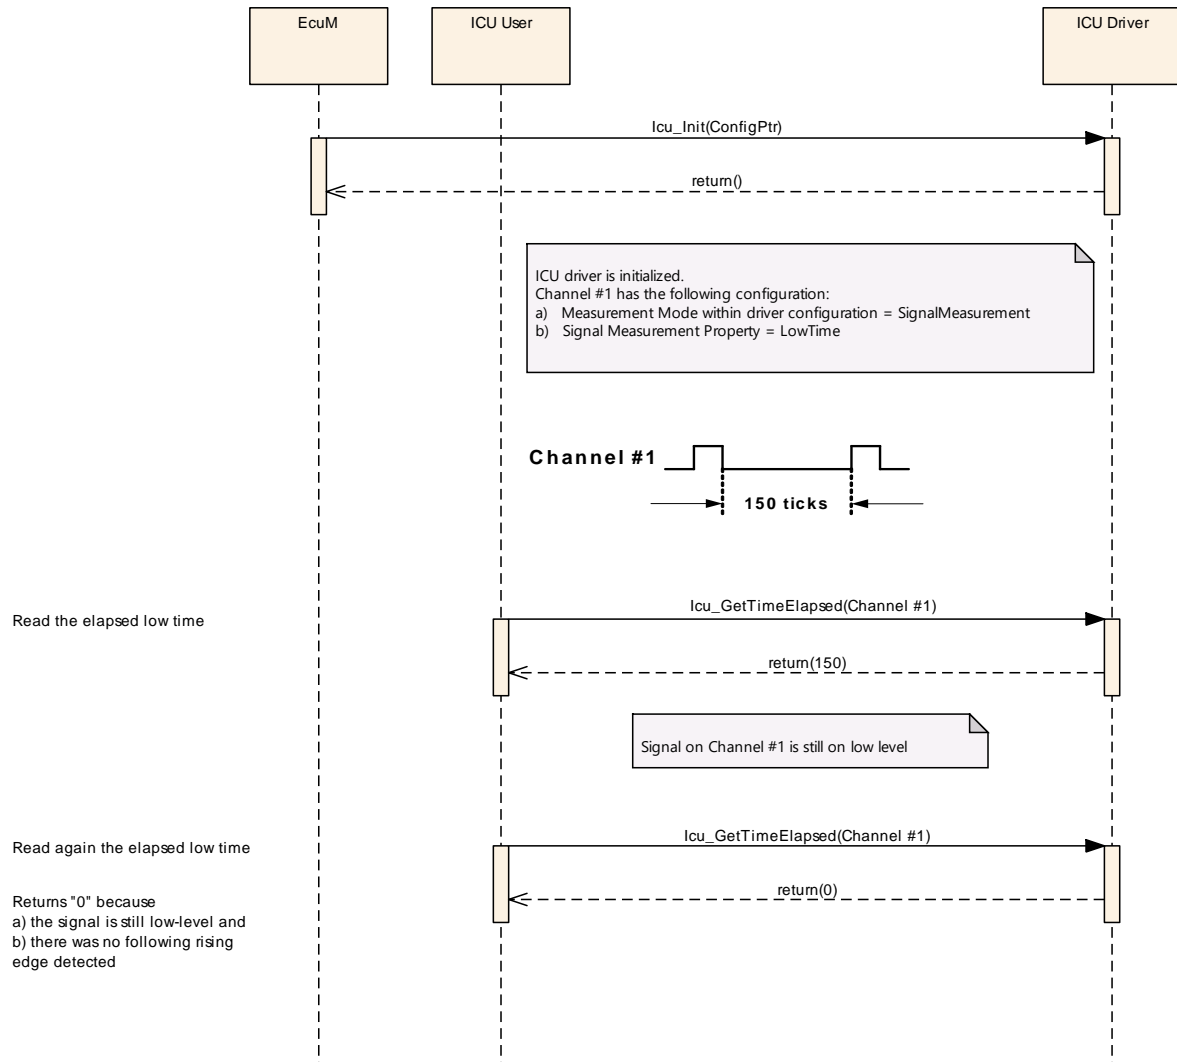

Figure 9.17: Inquire the elapsed level-time of a channel

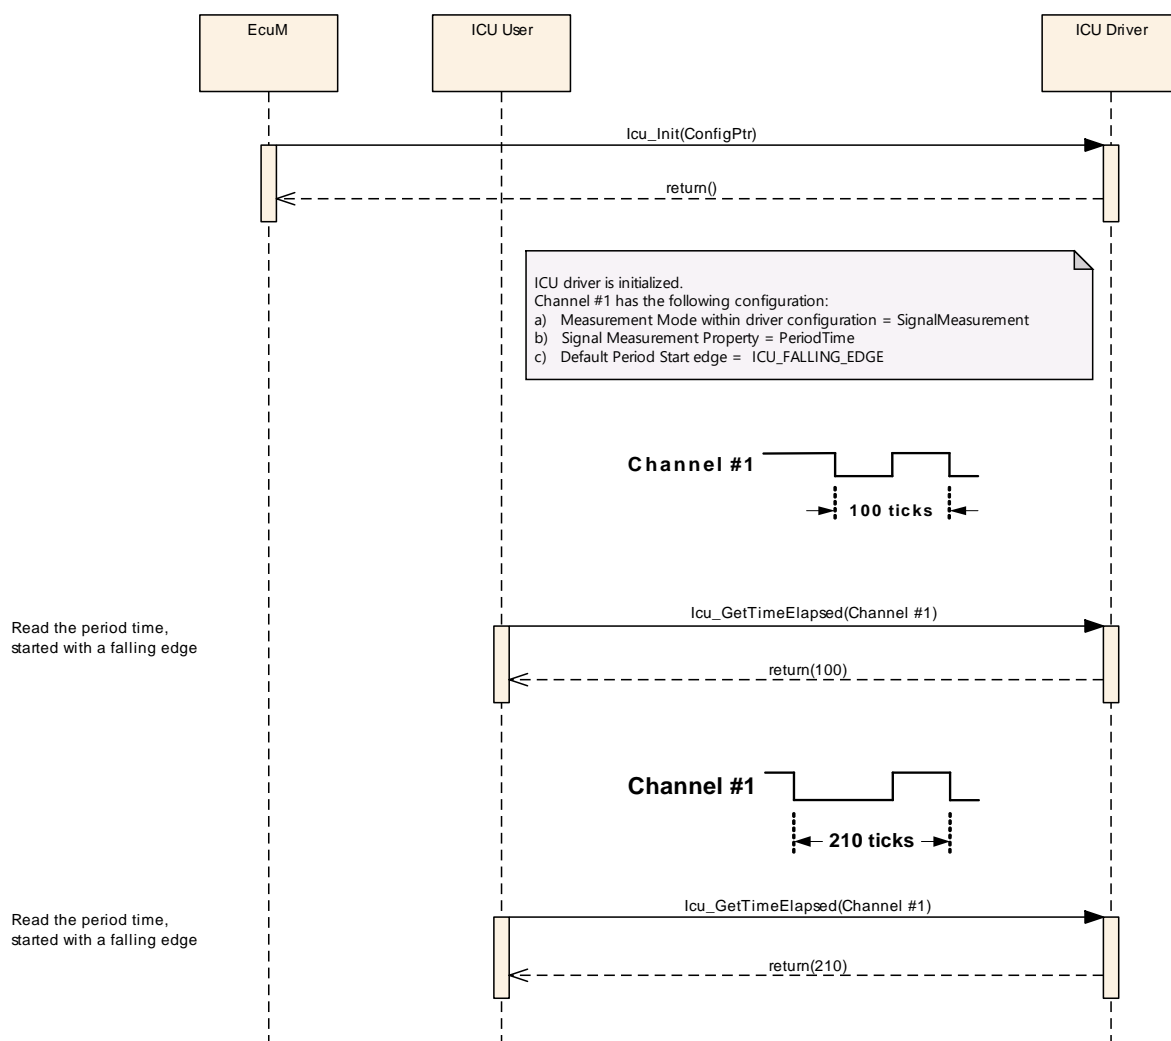

Figure 9.18: Inquire the elapsed period time of a channel

The following example shows the exemplary behaviour before, while and after capturing the “high time” of a signal.

**The shown behaviour is also appropriate for the service `Icu_GetDutyCycleValues()`.**

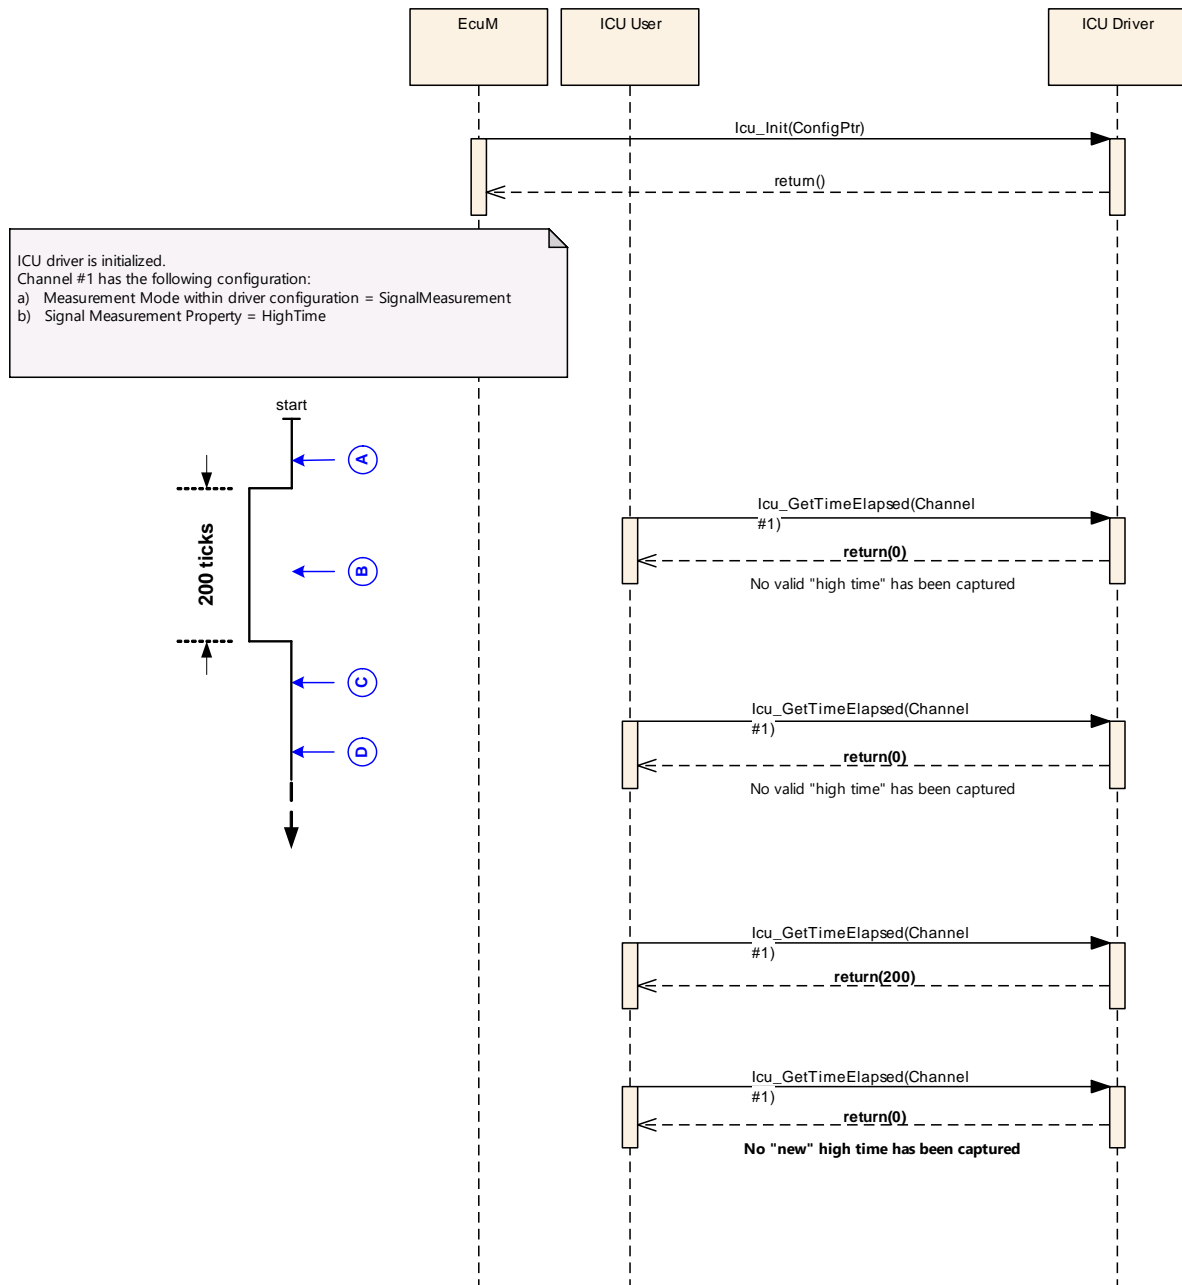

Figure 9.19: Inquire the elapsed high time of a channel

## 9.14 Icu\_GetDutyCycleValues

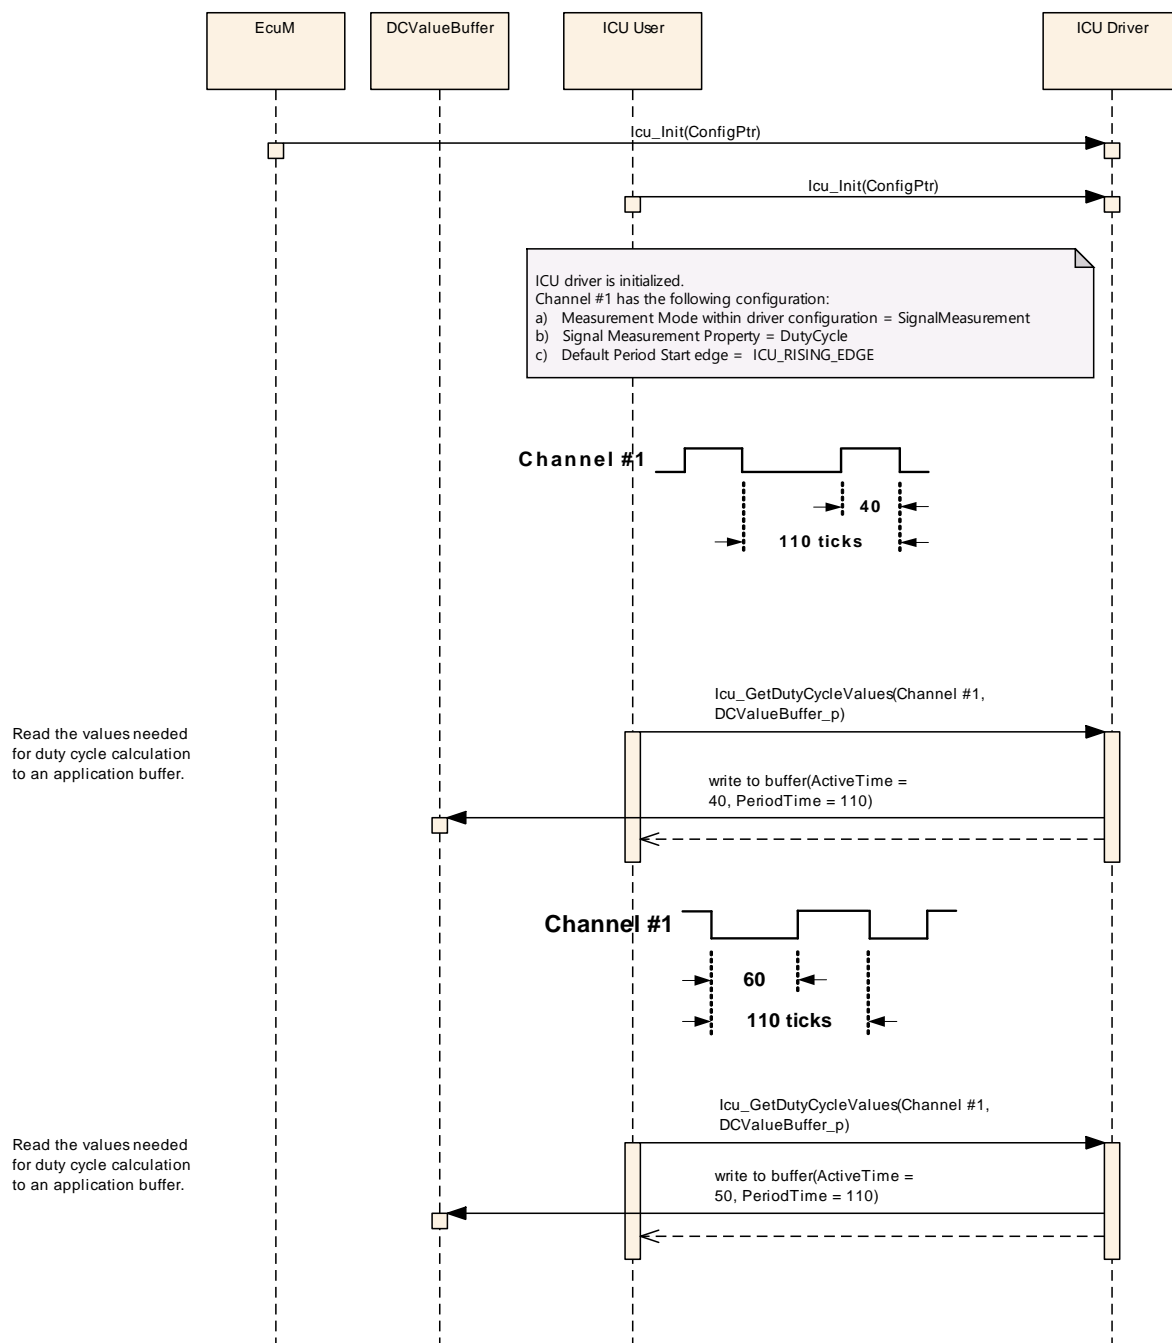

Figure 9.20: Measure the values needed for calculation of duty cycles

## 9.15 Icu\_DisableNotificationAsync

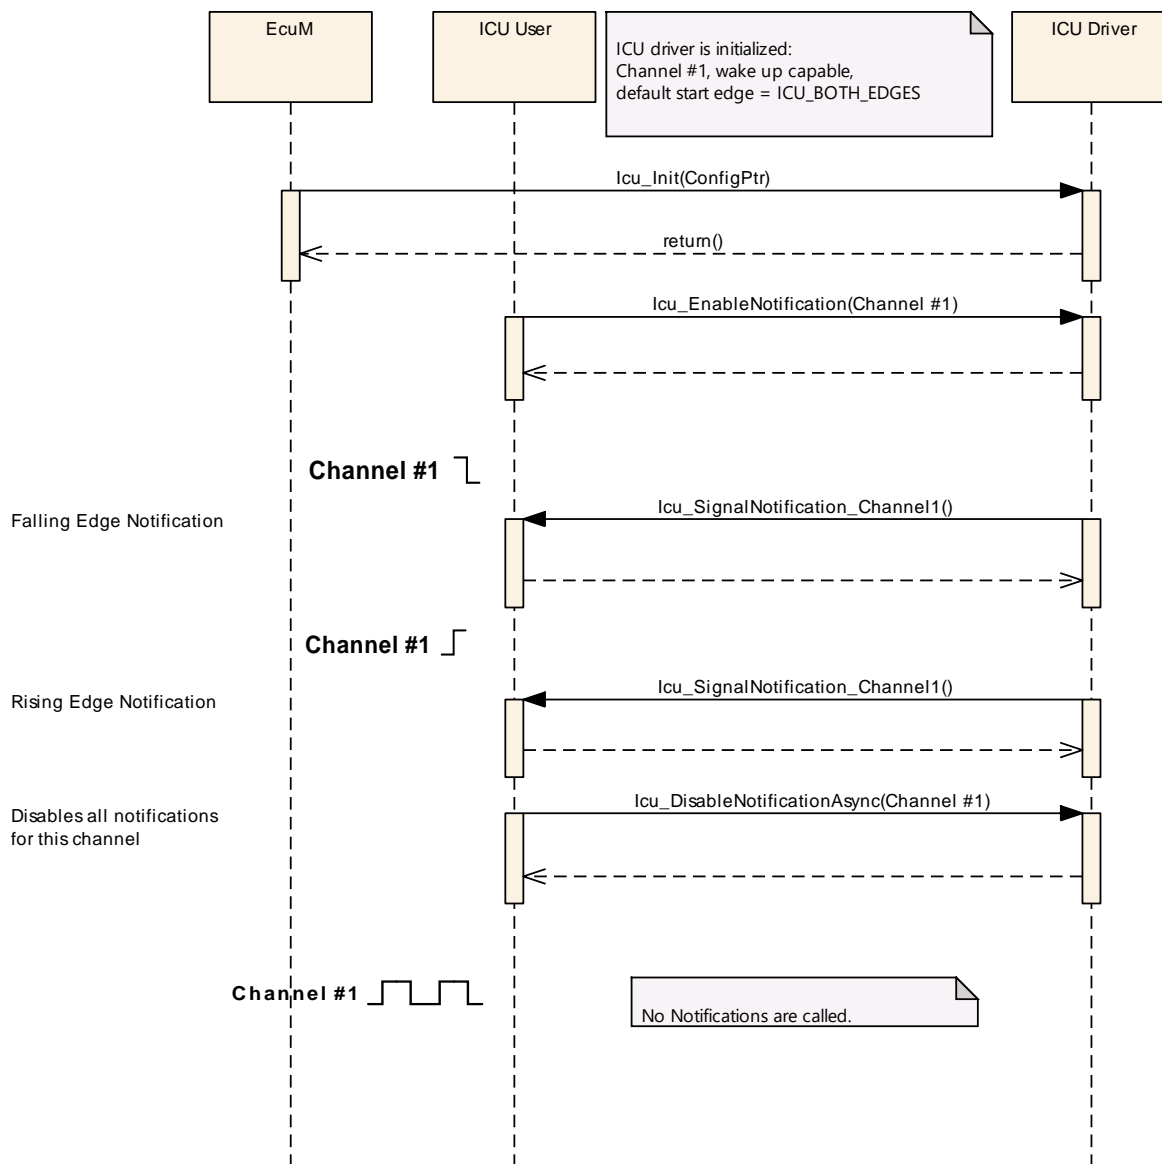

Figure 9.21: Disabling of the notification for a channel

## 9.16 Icu\_SignalNotification and Icu\_GetInputState

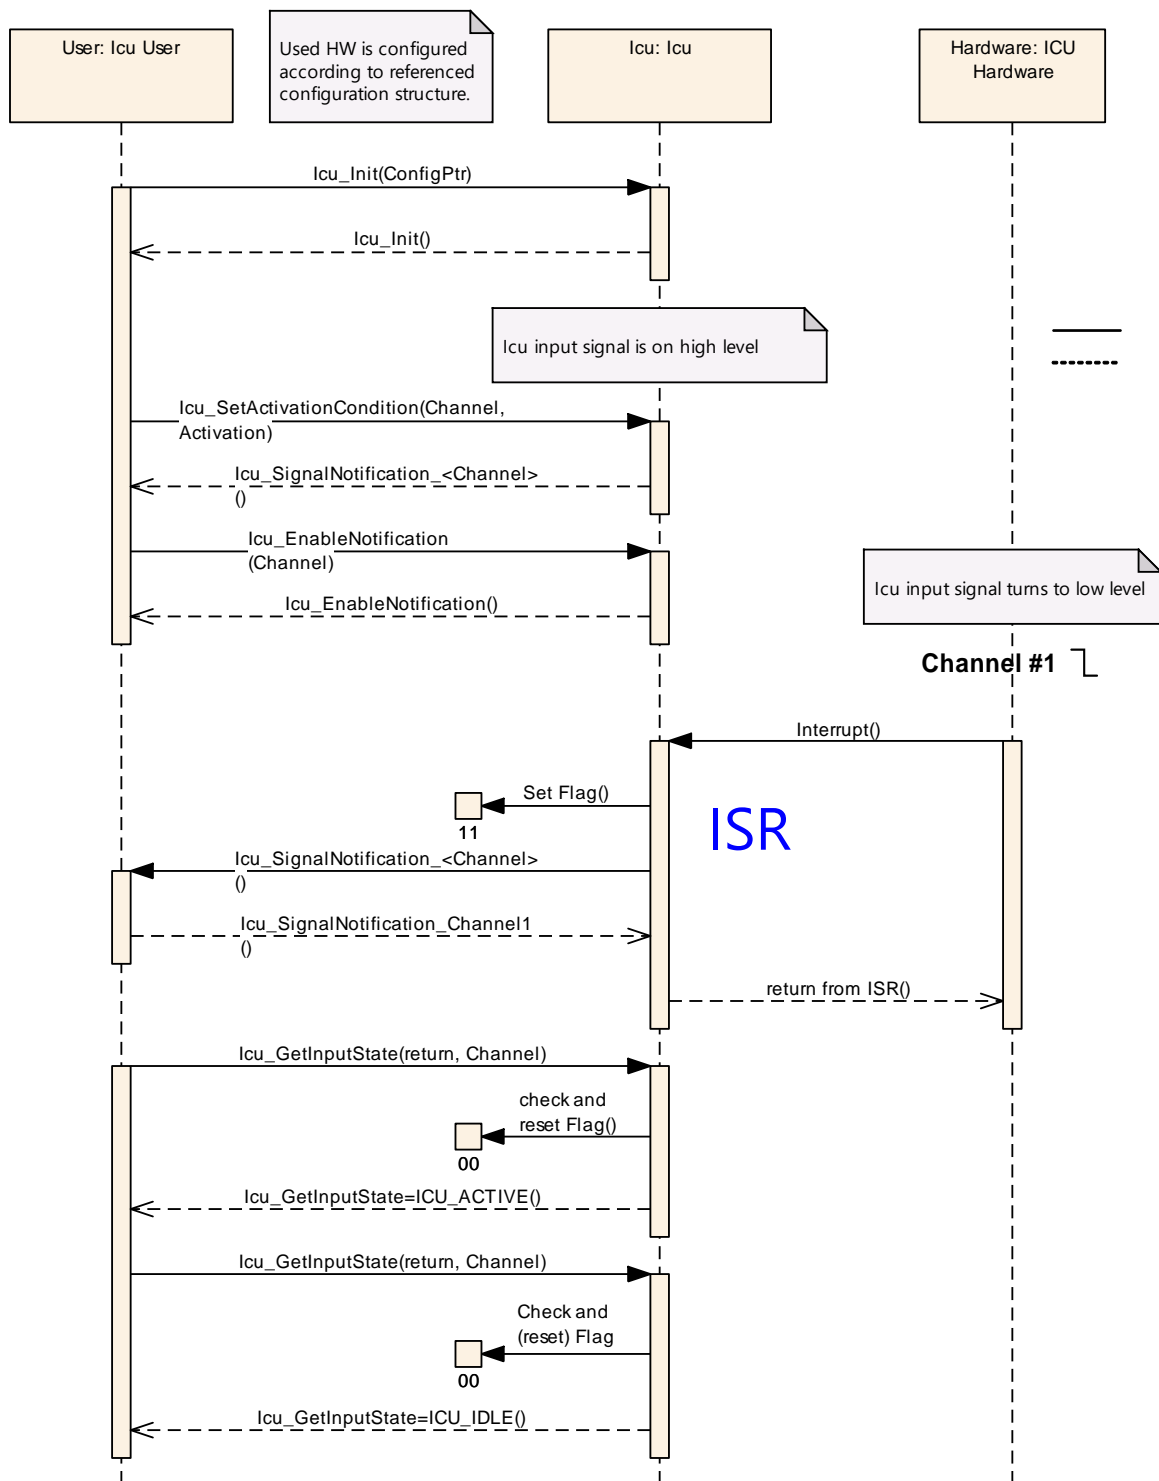

Figure 9.22: Cooperative usage of notification and polling mechanism

## 9.17 Icu\_EnableNotificationAsync

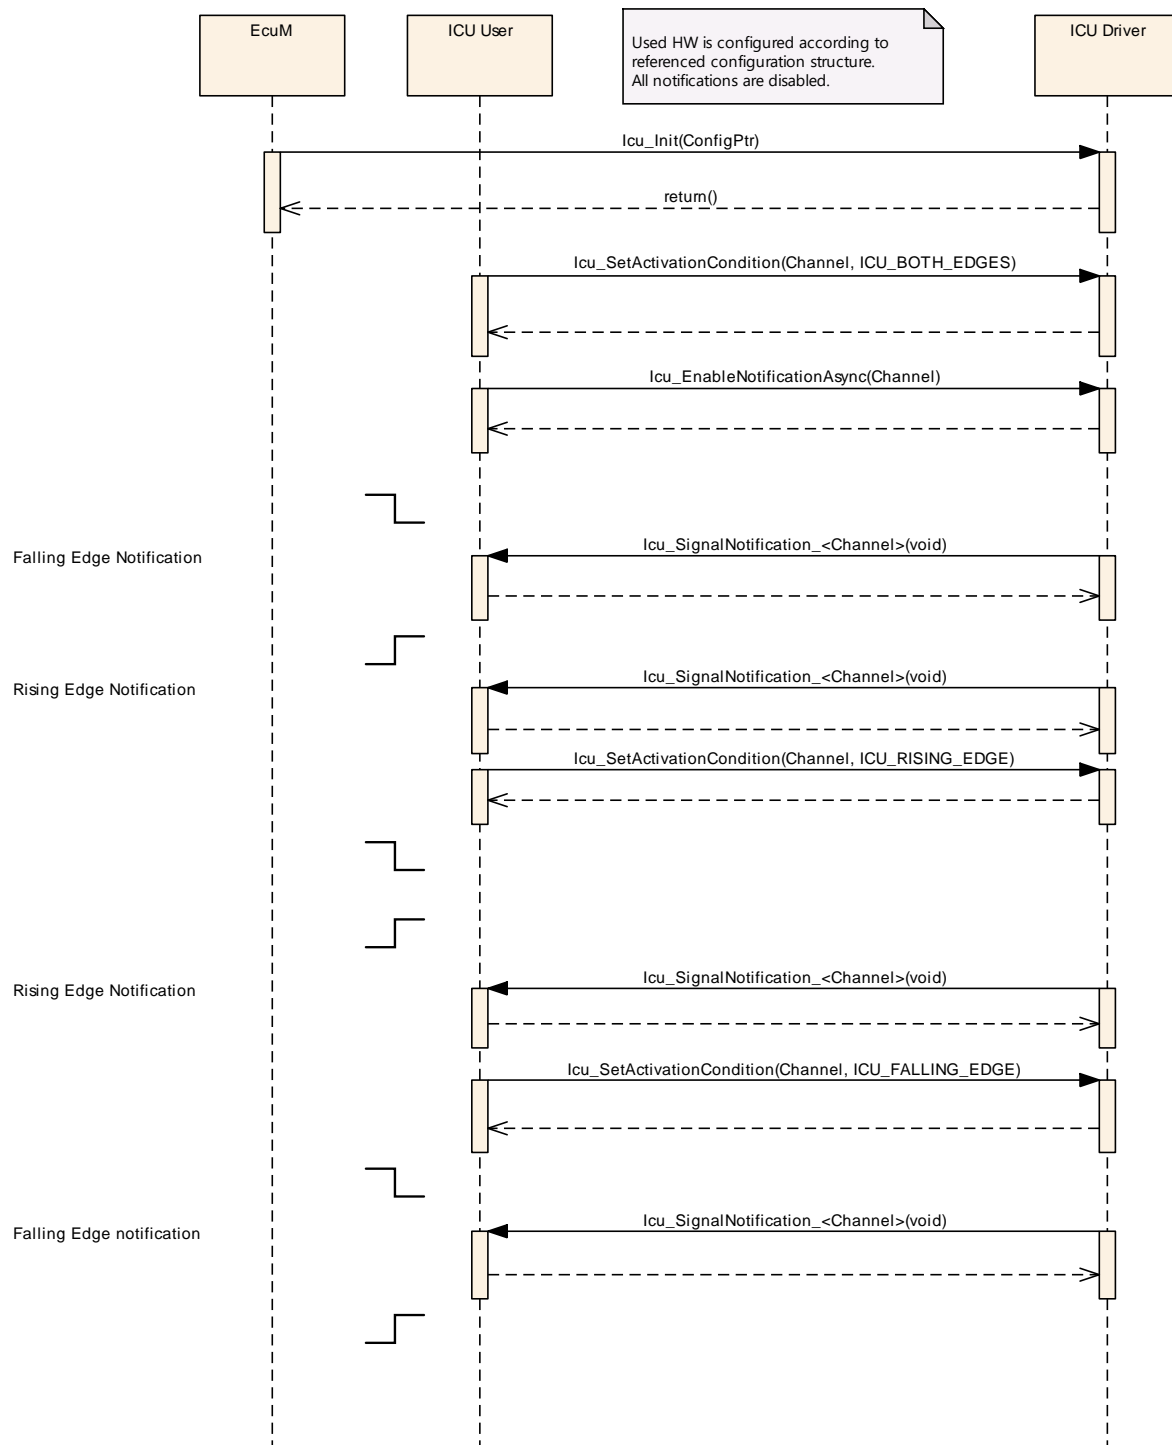

Figure 9.23: Enabling of the edge-notification for a channel via asynchronous API

## 10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification, Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module ICU.

Chapter 10.3 specifies published information of the module ICU.

### 10.1 How to read this chapter

For details refer to the chapter 10.1 “Introduction to configuration specification” in *SWS\_BSWGeneral*.

## 10.2 Containers and configuration parameters

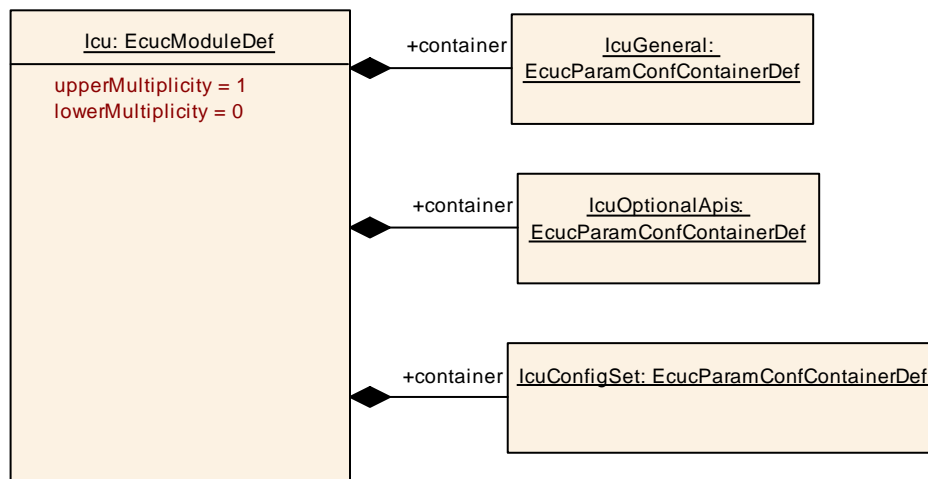

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapters 7 and Chapter [8](#).

**[SWS\_Icu\_00384]** 「 The Icu module shall reject configurations with partition mappings which are not supported by the implementation. 」()

### 10.2.1 Icu

|                                   |   |
|-----------------------------------|---|
| <b>SWS Item</b>                   | <b>ECUC_Icu_00357 :</b>                               |
| <b>Module Name</b>                | <i>Icu</i>  |
| <b>Module Description</b>         | Configuration of the Icu (Input Capture Unit) module. |
| <b>Post-Build Variant Support</b> | true  |
| <b>Supported Config Variants</b>  | VARIANT-POST-BUILD, VARIANT-PRE-COMPILE               |

| <b>Included Containers</b> |                     |   |
|----------------------------|---------------------|---|
| <b>Container Name</b>      | <b>Multiplicity</b> | <b>Scope / Dependency</b>   |
| IcuConfigSet               | 1                   | This container contains the configuration parameters and sub containers of the AUTOSAR Icu module.          |
| IcuGeneral                 | 1                   | Configuration of general ICU parameters.  |
| IcuOptionalApis            | 1                   | This container contains all configuration switches for configuring optional API services of the ICU driver. |

### 10.2.2 IcuGeneral

|                                 |  |
|---------------------------------|--|
| <b>SWS Item</b>                 | <b>ECUC_Icu_00026 :</b>                  |

## 10.2.9 IcuConfigSet

|                                 |  |
|---------------------------------|--|
| <b>SWS Item</b>                 | <b>ECUC_Icu_00219 :</b>  |
| <b>Container Name</b>           | IcuConfigSet   |
| <b>Parent Container</b>         | Icu  |
| <b>Description</b>              | This container contains the configuration parameters and sub containers of the AUTOSAR Icu module. |
| <b>Configuration Parameters</b> |  |

|                                  |  |    |                     |
|----------------------------------|--|----|---------------------|
| <b>SWS Item</b>                  | <b>ECUC_Icu_00220 :</b>  |    |                     |
| <b>Name</b>                      | IcuMaxChannel  |    |                     |
| <b>Parent Container</b>          | IcuConfigSet   |    |                     |
| <b>Description</b>               | <p>This parameter contains the number of Channels configured. It will be gathered by tools during the configuration stage.</p> <p>calculationFormula = Number of configured Icu Channels</p> <p>Implementation Type: Icu_ChannelType</p> |    |                     |
| <b>Multiplicity</b>              | 1  |    |                     |
| <b>Type</b>                      | EcucIntegerParamDef  |    |                     |
| <b>Range</b>                     | 0 .. 65535   |    |                     |
| <b>Default value</b>             | --   |    |                     |
| <b>Post-Build Variant Value</b>  | true   |    |                     |
| <b>Value Configuration Class</b> | <b>Pre-compile time</b>  | X  | VARIANT-PRE-COMPILE |
|                                  | <b>Link time</b>   | -- |                     |
|                                  | <b>Post-build time</b>   | X  | VARIANT-POST-BUILD  |
| <b>Scope / Dependency</b>        | scope: local   |    |                     |

| <b>Included Containers</b> |                     |   |
|----------------------------|---------------------|---|
| <b>Container Name</b>      | <b>Multiplicity</b> | <b>Scope / Dependency</b>                   |
| IcuChannel                 | 1..*                | Configuration of an individual ICU channel. |

### 10.3 Published Information

**[SWS\_Icu\_00131]** [The ICU driver shall describe which other modules (in which versions) are required. This description shall be done by the implementer.] (SRS\_BSW\_00384)
