# 1 Scope of this document

This document specifies requirements of the AUTOSAR Adaptive Platform on the Execution Management. The motivation is to provide a standardized way to start, stop and police applications platform wide.

## 2 Conventions to be used

The representation of requirements in AUTOSAR documents follows the table specified in [TPS\_STDT\_00078], see Standardization Template [1], chapter Support for Traceability.

The verbal forms for the expression of obligation specified in [TPS\_STDT\_00053] shall be used to indicate requirements, see Standardization Template [1], chapter Support for Traceability.

### 2.1 Requirements Guidelines

#### 2.1.1 Requirements quality

#### 2.1.2 Requirements identification

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as follows.

Note that the requirement level of the document in which they are used modifies the force of these words.

- **MUST:** This word, or the adjective "LEGALLY REQUIRED", means that the definition is an absolute requirement of the specification due to legal issues.
- **MUST NOT:** This phrase, or the phrase "MUST NOT", means that the definition is an absolute prohibition of the specification due to legal issues.
- **SHALL:** This phrase, or the adjective "REQUIRED", means that the definition is an absolute requirement of the specification.
- **SHALL NOT:** This phrase means that the definition is an absolute prohibition of the specification.
- **SHOULD:** This word, or the adjective "RECOMMENDED", means that there may exist valid reasons in particular circumstances to ignore a particular item, but the full implications must be understood and carefully weighed before choosing a different course.

- **SHOULD NOT:** This phrase, or the phrase "NOT RECOMMENDED", means that there may exist valid reasons in particular circumstances when the particular behavior is acceptable or even useful, but the full implications should be understood and the case carefully weighed before implementing any behavior described with this label.
- **MAY:** This word, or the adjective "OPTIONAL", means that an item is truly optional. One vendor may choose to include the item because a particular market-place requires it or because the vendor feels that it enhances the product while another vendor may omit the same item.

An implementation, which does not include a particular option, SHALL be prepared to interoperate with another implementation, which does include the option, though perhaps with reduced functionality. In the same vein an implementation, which does include a particular option, SHALL be prepared to interoperate with another implementation, which does not include the option (except, of course, for the feature the option provides.)

### 2.1.3 Requirements status

The following requirements are described within this document but not otherwise considered in this release:

- [\[RS\\_EM\\_00111\]](#) – Identification of Processes

The functionality described above is subject to modification and will be considered for inclusion in a future release of this document.

## 3 Acronyms and abbreviations

All technical terms used throughout this document – except the ones listed here – can be found in the official [\[2\]](#) AUTOSAR Glossary or [\[3\]](#) TPS Manifest Specification.

Term	Description
process	A <a href="#">process</a> refers to the OS concept of a running process. <b>Attention:</b> <a href="#">process</a> is <b>not equal</b> to <a href="#">Modelled Process</a> (see below). Hence each <a href="#">Modelled Process</a> has at some time a related (OS) process but a process may not always have a related <a href="#">Modelled Process</a> .
Modelled Process	A Modelled Process is an instance of an <a href="#">Executable</a> to be executed on a <a href="#">Machine</a> .
Execution Dependency	Dependencies between <a href="#">Executable</a> instances can be configured to define a sequence for starting and terminating them.
Execution Management	The element of the <a href="#">AUTOSAR Adaptive Platform</a> responsible for the ordered startup and shutdown of the <a href="#">AUTOSAR Adaptive Platform</a> and <a href="#">Adaptive Applications</a> .

State Management	The element defining modes of operation for <a href="#">AUTOSAR Adaptive Platform</a> . It allows flexible definition of functions which are active on the platform at any given time.
Identity and Access Management (IAM)	A <a href="#">Adaptive Platform Service</a> within the <a href="#">AUTOSAR Adaptive Platform</a>
Function Group	A <a href="#">Function Group</a> is a set of coherent <a href="#">Modelled Processes</a> , which need to be controlled consistently. Depending on the state of the <a href="#">Function Group</a> , <a href="#">processes</a> (related to the <a href="#">Modelled Processes</a> ) are started or terminated. <a href="#">processes</a> can belong to more than one <a href="#">Function Group State</a> (but at exactly one <a href="#">Function Group</a> ). "MachineFG" is a <a href="#">Function Group</a> with a predefined name, which is mainly used to control <a href="#">Machine</a> lifecycle and <a href="#">processes</a> of platform level <a href="#">Applications</a> . Other <a href="#">Function Groups</a> are sort of general purpose tools used (for example) to control <a href="#">processes</a> of user level <a href="#">Applications</a> .
Function Group State	The element of <a href="#">State Management</a> that characterizes the current status of a set of (functionally coherent) user-level <a href="#">Applications</a> . The set of <a href="#">Function Groups</a> and their <a href="#">Function Group States</a> is machine specific and are configured in <a href="#">Machine Manifest</a> .
Machine State	A state of <a href="#">Function Group</a> "MachineFG" with some predefined states (Startup/Shutdown/Restart). This can term can refer to the current state ("The Machine State is ..."), to a specific state ("In Machine State Startup ..."), or to a set of states ("In Machine States Startup or Shutdown ...").
Time Determinism	The results of a calculation are guaranteed to be available before a given deadline.
Data Determinism	The results of a calculation only depend on the input data and are reproducible, assuming a given initial internal state.
Full Determinism	Combination of Time and Data Determinism.
Communication Management	A <a href="#">Functional Cluster</a> within the <a href="#">Adaptive Platform Foundation</a>
Execution Manifest	<a href="#">Manifest</a> file to configure execution of an <a href="#">Adaptive Application</a> . An <a href="#">Execution Manifest</a> is created at integration time and deployed onto a <a href="#">Machine</a> together with the <a href="#">Executable</a> to which it is attached. It supports the integration of the <a href="#">Executable</a> code and describes the configuration properties (startup parameters, resource group assignment etc.) of each <a href="#">process</a> , i.e. started instance of that <a href="#">Executable</a> .
Machine Manifest	<a href="#">Manifest</a> file to configure a <a href="#">Machine</a> . The <a href="#">Machine Manifest</a> holds all configuration information which cannot be assigned to a specific <a href="#">Executable</a> or <a href="#">process</a> .
Operating System	Software responsible for managing <a href="#">processes</a> on a <a href="#">Machine</a> and for providing an interface to hardware resources.
ResourceGroup	Configuration element to enable restrictions on resources uses by <a href="#">Adaptive Applications</a> running in the group.
ExecutionClient	<a href="#">Adaptive Application</a> interface to <a href="#">Execution Management</a> .
DeterministicClient	<a href="#">Adaptive Application</a> interface to <a href="#">Execution Management</a> to support control of the process-internal cycle, a deterministic worker pool, activation time stamps and random numbers.

Platform Health Management	A <a href="#">Functional Cluster</a> within the <a href="#">Adaptive Platform Foundation</a>
Recovery Action	Actions defined by the integrator to control <a href="#">Adaptive Application</a> error recovery.
Process State	Lifecycle state of a <a href="#">Modelled Process</a>
Service Instance Manifest	<a href="#">Manifest</a> file to configure <a href="#">Service</a> usage of an <a href="#">Adaptive Application</a> .
Trusted Platform	An execution platform supporting a continuous chain of trust from boot through to application supporting authentication (that all code executed is from the claimed source) and integrity validation (that prevents tampered code/data from being executed).

**Table 3.1: Technical Terms**

The following technical terms used throughout this document are defined in the official [2] AUTOSAR Glossary or [3] TPS Manifest Specification – they are repeated here for tracing purposes.

Term	Description
Adaptive Application	see [2] AUTOSAR Glossary
Application	see [2] AUTOSAR Glossary
AUTOSAR Adaptive Platform	see [2] AUTOSAR Glossary
Adaptive Platform Foundation	see [2] AUTOSAR Glossary
Manifest	see [2] AUTOSAR Glossary
Executable	see [2] AUTOSAR Glossary
Functional Cluster	see [2] AUTOSAR Glossary
Adaptive Platform Service	see [2] AUTOSAR Glossary
Machine	see [2] AUTOSAR Glossary
Service	see [2] AUTOSAR Glossary
Service Interface	see [2] AUTOSAR Glossary
Service Discovery	see [2] AUTOSAR Glossary

**Table 3.2: Glossary-defined Technical Terms**

## 4 Requirements Specification

### 4.1 Functional Overview

The AUTOSAR Adaptive Platform provides services to influence the lifecycle of [Applications](#) based on configuration. This document therefore includes requirements that determine the facilities provided by [Execution Management](#) to affect the machine-wide startup, shutdown and restart of an [Application](#) based on configuration.

[Execution Management](#) is responsible for all aspects of platform lifecycle management and application lifecycle management, including:

- [Machine](#) startup and shutdown.

- **Execution Management** is the initial (“boot”) process of the operating system.
- Required process hierarchy of started services, e.g., init and its child process.
  - after booting. The boot process in this case corresponds to machine init process.
- Provision of process isolation with each instance of an **Executable** managed as a single process.
- Startup and shutdown of **Applications**.
  - Loading **Executable** based on a defined **Execution Dependency**.
  - Specific requirements until starting an **Executable** main function (i.e. entry point)
- Privileges and use of access control
  - description and semantics of access control in manifest files
- State management
  - Conditions for the execution of **Applications**

EM, PHM and SM are the main safety relevant functional clusters of the AUTOSAR Adaptive Platform. Consequently, their development may require certain processes to be followed - as recommended in ISO26262 and, for instance [RS\_SAF\_21201] [4]. A safety argumentation for the AUTOSAR Adaptive Platform, describing functional safety measures and use-cases is provided through Explanation of Safety Overview [5].

## 4.2 Functional Requirements

This section describes all requirements driving the work to define **Execution Management** functionality.

### 4.2.1 Startup and Shutdown of Applications

**[RS\_EM\_00002]{DRAFT} Execution Management shall set-up one process for the execution of each Modelled Process.** [

<b>Description:</b>	For each instance of an <b>Executable</b> , <b>Execution Management</b> shall allocate one POSIX process. Furthermore process specific properties (like priority, scheduling policy and access rights) shall be assigned based on the <b>Execution Manifest</b> .
<b>Rationale:</b>	Isolation of <b>Executable</b> instances from each other.

<b>Dependencies:</b>	–
<b>Use Case:</b>	Safety and security related <a href="#">Applications</a> require isolation.
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00010](#), [RS\\_Main\\_00049](#), [RS\\_Main\\_00080](#), [RS\\_Main\\_00320](#), [RS\\_Main\\_00150](#), [RS\\_Main\\_00420](#), [RS\\_SAF\\_21201](#))

**[RS\_EM\_00014]{DRAFT} Execution Management shall support a Trusted Platform.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall ensure that integrity and authenticity are checked for all <a href="#">Executables</a> and their corresponding <a href="#">Execution Management</a> meta-data (i.e. processed Machine and Execution Manifests), and shall only allow starting <a href="#">Executables</a> that passed validation check.
<b>Rationale:</b>	<a href="#">Execution Management</a> takes over the responsibility from <a href="#">Operating System</a> and/or boot loader for <a href="#">AUTOSAR Adaptive Platform</a> startup and hence for keeping the platform trusted. <a href="#">Execution Management</a> is the only <a href="#">AUTOSAR Adaptive Platform</a> entity allowed to start <a href="#">Executables</a> and therefore responsible for the continuation of trust for the <a href="#">AUTOSAR Adaptive Platform</a> .
<b>Dependencies:</b>	–
<b>Use Case:</b>	Verify the integrity and authenticity of software deployed on <a href="#">AUTOSAR Adaptive Platform</a> .
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00170](#), [RS\\_Main\\_00514](#), [RS\\_Main\\_00180](#))

**[RS\_EM\_00015]{DRAFT} Execution Management shall support integrity and authenticity monitoring.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall support configurable integrity and authenticity monitoring for all <a href="#">Executables</a> and their corresponding <a href="#">Execution Management</a> meta-data (i.e. processed Machine and Execution Manifests).
<b>Rationale:</b>	<a href="#">Execution Management</a> takes over the responsibility from <a href="#">Operating System</a> and/or boot loader for <a href="#">AUTOSAR Adaptive Platform</a> startup and hence for keeping the platform trusted. <a href="#">Execution Management</a> is the only <a href="#">AUTOSAR Adaptive Platform</a> entity allowed to start <a href="#">Executables</a> and therefore responsible for the continuation of trust for the <a href="#">AUTOSAR Adaptive Platform</a> . However unsigned SW (or incorrectly signed SW) may at times be used and to allow this, <a href="#">Execution Management</a> should optionally support execution. However the presence of such deployments should be noted.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Support deployment of prototype (unsigned) software during system development.

<b>Supporting Material:</b>	–
-----------------------------	---

](RS\_Main\_00170, RS\_Main\_00514, RS\_Main\_00180)

**[RS\_EM\_00005]{DRAFT} Execution Management shall support the configuration of OS resource budgets for process and groups of processes.** [

<b>Description:</b>	Based on the <a href="#">Execution Manifest</a> , <a href="#">Execution Management</a> shall allocate OS resources to the <a href="#">process</a> . The allocation shall be possible for single <a href="#">process</a> and groups of <a href="#">processes</a> .
<b>Rationale:</b>	Real-time guarantees shall be defined
<b>Dependencies:</b>	–
<b>Use Case:</b>	Like <code>cgroups</code> (based on containers which contain one or more processes) and <code>ulimit</code> .
<b>Supporting Material:</b>	–

](RS\_Main\_00002, RS\_Main\_00010, RS\_Main\_00106, RS\_Main\_00340, RS\_Main\_00150)

**[RS\_EM\_00008]{DRAFT} Execution Management shall support the binding of all threads of a given process to a specified set of processor cores.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall allow the binding of threads to specific set of processor cores based on configuration in the <a href="#">Execution Manifest</a> . The binding granularity shall be at process level.
<b>Rationale:</b>	Mechanism to influence load balancing, reaction times, and latencies.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Assign two parallel threads to two processor cores to achieve true parallelism.
<b>Supporting Material:</b>	–

](RS\_Main\_00010, RS\_Main\_00050, RS\_Main\_00106, RS\_Main\_00320, RS\_Main\_00501, RS\_Main\_00150)

**[RS\_EM\_00009]{DRAFT} Execution Management shall ensure it is the sole entity starting processes.** [

<b>Description:</b>	<a href="#">Execution Management</a> is responsible for starting child <a href="#">processes</a> and shall prevent such child <a href="#">processes</a> from directly starting other processes.
<b>Rationale:</b>	<a href="#">Execution Management</a> needs full control of starting applications to ensure required isolation of temporal and spatial properties. Only <a href="#">Execution Management</a> shall start <a href="#">processes</a> .

△

<b>Dependencies:</b>	–
<b>Use Case:</b>	Segregation between applications with different safety and/or security properties.
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00010](#), [RS\\_Main\\_00011](#), [RS\\_Main\\_00049](#), [RS\\_Main\\_00150](#), [RS\\_SAF\\_21201](#))

**[RS\_EM\_00010] Execution Management shall support multiple instances of Executables.** [

<b>Description:</b>	It shall be possible to start more than one <a href="#">Modelled Process</a> from a single <a href="#">Executable</a> . Instance specific information is described in <a href="#">Modelled Process</a> startup configuration.
<b>Rationale:</b>	Avoid code duplication.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Redundancy of an <a href="#">Executable</a> by parallel execution of two instances.
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00002](#), [RS\\_Main\\_00049](#), [RS\\_Main\\_00106](#), [RS\\_Main\\_00501](#))

**[RS\_EM\_00011] Execution Management shall support self-initiated graceful shutdown of processes.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall support self-initiated graceful shutdown of <a href="#">processes</a> .
<b>Rationale:</b>	Self-initiated graceful shutdown enables a <a href="#">process</a> to free allocated dedicated resources and inform other interacting entities about its shutdown (e.g. de-registering a service) to create a consistent state within the <a href="#">Machine/vehicle</a> . Self-initiated <a href="#">process</a> shutdown is, by definition, only be initiated by the <a href="#">process</a> itself.
<b>Dependencies:</b>	–
<b>Use Case:</b>	The process of an <a href="#">Executable</a> instance is finished and shuts down itself.
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00002](#), [RS\\_Main\\_00049](#))

**[RS\_EM\_00100] Execution Management shall support the ordered startup and shutdown of processes.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall support the ordered startup and shutdown of <a href="#">Executable</a> instances.
<b>Rationale:</b>	Ensure that startup and shutdown dependencies between <a href="#">Executable</a> instances are respected, if an execution dependency is specified in the <a href="#">Execution Manifest</a> of an <a href="#">Executable</a> instance. If no execution dependency is specified between <a href="#">Executable</a> instances, they can be started and stopped in an arbitrary order.
<b>Dependencies:</b>	–
<b>Use Case:</b>	An <a href="#">Executable</a> needs a specific functional cluster to be up and running before it can be started.
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00002](#), [RS\\_Main\\_00049](#), [RS\\_Main\\_00340](#), [RS\\_Main\\_00460](#))

#### 4.2.2 Execution

**[RS\_EM\_00050]{DRAFT} Execution Management shall perform Machine-wide coordination of processes.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall provide an API for a <a href="#">process</a> to register its activities for being able to coordinate their execution.
<b>Rationale:</b>	Coordinated scheduling of activities across <a href="#">Executables</a> .
<b>Dependencies:</b>	–
<b>Use Case:</b>	Usage of computation resources within the running <a href="#">processes</a> shall be managed in the <a href="#">Machine</a> to ensure that activities can be coordinated across <a href="#">processes</a> . Registration enables <a href="#">Execution Management</a> to form the necessary <a href="#">Machine</a> -wide view for the coordination.
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00460](#), [RS\\_SAF\\_21202](#))

**[RS\_EM\_00051]{DRAFT} Execution Management shall provide APIs to the process for configuring external trigger conditions for its activities.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall provide an API for configuring the trigger conditions of registered activities.
<b>Rationale:</b>	<a href="#">Execution Management</a> shall have the information when to schedule the activities.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Execution on data receipt, sequencing of activity execution.
<b>Supporting Material:</b>	–

](RS\_Main\_00050, RS\_Main\_00060)

**[RS\_EM\_00052]{DRAFT} Execution Management shall provide APIs to the process for configuring cyclic triggering of its activities. [**

<b>Description:</b>	Execution Management shall provide an API for configuring the cyclic triggering of registered activities.
<b>Rationale:</b>	Execution Management shall have the information when to schedule the activities.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Cyclic execution of activities
<b>Supporting Material:</b>	–

](RS\_Main\_00050, RS\_Main\_00340)

**[RS\_EM\_00053]{DRAFT} Execution Management shall provide APIs to the process to support deterministic redundant execution of processes. [**

<b>Description:</b>	Execution Management shall provide APIs to support deterministic redundant execution of processes.
<b>Rationale:</b>	High ASIL systems require safety mechanism like software lockstep to be implemented on non-automotive grade microprocessors. The redundant execution shall guarantee deterministic, i.e. reproducible results.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Redundant execution of activities to implement software lockstep
<b>Supporting Material:</b>	–

](RS\_Main\_00010, RS\_Main\_00501, RS\_SAF\_21202)

**[RS\_EM\_00113]{DRAFT} Execution Management shall support time-triggered execution. [**

<b>Description:</b>	Execution Management shall facilitate time-triggered periodic execution.
<b>Rationale:</b>	Algorithms in processes can be time-triggered. The OS needs to provide mechanisms to allow the time-triggered execution of applications. The triggers need to contain at least external timers, but are not limited to.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Redundant execution of activities to implement software lockstep
<b>Supporting Material:</b>	–

](RS\_Main\_00010, RS\_Main\_00501)

**[RS\_EM\_00111]{DRAFT} Execution Management shall assist identification of processes during Machine runtime. [**

<b>Description:</b>	Adaptive Applications shall be identifiable, for example by Identity and Access Management, during runtime so that access restrictions can be enforced. Execution Management spawns runtime processes based on Execution Manifest. Execution Management is qualified to assist AUTOSAR Adaptive Platform software, such as Identity and Access Management, by providing information about the link between runtime representation and Modelled Process.
<b>Rationale:</b>	Adaptive Applications shall be identifiable by Identity and Access Management on the basis of their runtime representation as spawned by Execution Management.
<b>Dependencies:</b>	–
<b>Use Case:</b>	App A requests access on Service Interface. Identity and Access Management is able to retrieve runtime information of App A, e.g. POSIX pid or cryptographic token. Execution Management assists Identity and Access Management by resolving this runtime information to the Adaptive Application.
<b>Supporting Material:</b>	–

](RS\_Main\_00170, RS\_Main\_00514, RS\_Main\_00420)

### 4.2.3 State Management

[RS\_EM\_00101]{DRAFT} Execution Management shall support State Management functionality. [

<b>Description:</b>	Execution Management shall provide an interface to State Management to request a change in Function Group State.
<b>Rationale:</b>	To support the starting and stopping of processes based on declared Function Group State dependencies, Execution Management provides an interface to request Function Group State (including Machine State) changes by the State Management functional cluster. In response to state change requests, Execution Management ensures that only the required set of Application processes are running in any given operation conditions and therefore platform resources are saved for relevant processes.
<b>Dependencies:</b>	–
<b>Use Case:</b>	Provide a mechanism to define modes of operation of the Machine.
<b>Supporting Material:</b>	–

](RS\_Main\_00460)

[RS\_EM\_00103] Execution Management shall support process lifecycle management. [

<b>Description:</b>	The lifecycle of a <a href="#">process</a> consists of its initialization, running and terminating (shutdown) phases. As well as supporting transitions between these phases of the <a href="#">process</a> lifecycle, <a href="#">Execution Management</a> should ensure that phases, e.g. the startup and shutdown, of <a href="#">processes</a> can be coordinated between groups of <a href="#">processes</a> which shall run in the same <a href="#">Machine State</a> or <a href="#">Function Group State</a> . Coordination and tracking of lifecycle phases enables <a href="#">Execution Management</a> to ensure that <a href="#">Executable's processes</a> are fully established and running before other <a href="#">processes</a> which depend on their functionality can be started.
<b>Rationale:</b>	Coordination and tracking of lifecycle phases enables <a href="#">Execution Management</a> to ensure that <a href="#">Executable processes</a> are fully established and running before other executable <a href="#">processes</a> which depend on their functionality can be started.
<b>Dependencies:</b>	–
<b>Use Case:</b>	
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00049](#), [RS\\_Main\\_00050](#), [RS\\_Main\\_00106](#), [RS\\_Main\\_00460](#), [RS\\_SAF\\_-21201](#))

#### 4.2.4 Error Handling

[[RS\\_EM\\_00150](#)]{DRAFT} **Error Handling.** [

<b>Description:</b>	<a href="#">Execution Management</a> shall support error handling including unrecoverable errors.
<b>Rationale:</b>	<a href="#">Execution Management</a> may face conditions where it has no mechanism to recover the system. These situations are typically expected to result from a misconfigured system and therefore a suitable response might be to halt startup so that the misconfiguration can be resolved.
<b>Dependencies:</b>	–
<b>Use Case:</b>	<a href="#">Execution Management</a> can not start PHM or <a href="#">State Management</a> and hence the platform as a whole cannot be started, it is not possible to recover from this situation hence <a href="#">Execution Management</a> must halt startup.
<b>Supporting Material:</b>	–

]([RS\\_Main\\_00011](#))

#### 4.2.5 Support for Diagnostics

Support for Diagnostics is handled by [State Management](#) and therefore the requirements are replaced by the ones from [6].

### 4.3 Non-Functional Requirements

None.

## 5 Requirements Tracing

The following tables reference the requirements specified in [7] and links to the fulfillment of these.

Please note that if column “Satisfied by” is empty for a specific requirement this means that this requirement is not fulfilled by this document. Likewise, an entry of [RS\_EM\_NA] indicates that the source requirement has been evaluated as “not applicable” to [Execution Management](#).

Requirement	Description	Satisfied by
[RS_Main_00002]	AUTOSAR shall provide a software platform for high performance computing platforms	<a href="#">[RS_EM_00005]</a> <a href="#">[RS_EM_00010]</a> <a href="#">[RS_EM_00011]</a> <a href="#">[RS_EM_00100]</a>
[RS_Main_00010]	Safety Mechanisms	<a href="#">[RS_EM_00002]</a> <a href="#">[RS_EM_00005]</a> <a href="#">[RS_EM_00008]</a> <a href="#">[RS_EM_00009]</a> <a href="#">[RS_EM_00053]</a> <a href="#">[RS_EM_00113]</a>
[RS_Main_00011]	Mechanisms for Reliable Systems	<a href="#">[RS_EM_00009]</a> <a href="#">[RS_EM_00150]</a>
[RS_Main_00026]	AUTOSAR shall support high speed and high bandwidth communication between executed SW	<a href="#">[RS_EM_NA]</a>
[RS_Main_00030]	Safety Related Process Support	<a href="#">[RS_EM_NA]</a>
[RS_Main_00049]	AUTOSAR shall provide an Execution Management for running multiple applications	<a href="#">[RS_EM_00002]</a> <a href="#">[RS_EM_00009]</a> <a href="#">[RS_EM_00010]</a> <a href="#">[RS_EM_00011]</a> <a href="#">[RS_EM_00100]</a> <a href="#">[RS_EM_00103]</a>
[RS_Main_00050]	AUTOSAR shall provide an Execution Framework towards applications to implement concurrent application internal control flows	<a href="#">[RS_EM_00008]</a> <a href="#">[RS_EM_00051]</a> <a href="#">[RS_EM_00052]</a> <a href="#">[RS_EM_00103]</a>
[RS_Main_00060]	Standardized Application Communication Interface	<a href="#">[RS_EM_00051]</a>
[RS_Main_00080]	Formal Description Language	<a href="#">[RS_EM_00002]</a>
[RS_Main_00106]	AUTOSAR shall provide the possibility to extend the software with new SWCs without recompiling the platform foundation	<a href="#">[RS_EM_00005]</a> <a href="#">[RS_EM_00008]</a> <a href="#">[RS_EM_00010]</a> <a href="#">[RS_EM_00103]</a>
[RS_Main_00140]	AUTOSAR shall provide network independent communication mechanisms for applications	<a href="#">[RS_EM_NA]</a>
[RS_Main_00150]	AUTOSAR shall support the deployment and reallocation of AUTOSAR Application Software	<a href="#">[RS_EM_00002]</a> <a href="#">[RS_EM_00005]</a> <a href="#">[RS_EM_00008]</a> <a href="#">[RS_EM_00009]</a>

Requirement	Description	Satisfied by
[RS_Main_00160]	Interface Modeling	[RS_EM_NA]
[RS_Main_00161]	Unified Abstract Application Modeling	[RS_EM_NA]
[RS_Main_00170]	AUTOSAR shall provide secure access to ECU data and services	[RS_EM_00014] [RS_EM_00015] [RS_EM_00111]
[RS_Main_00180]	Intellectual Property Protection	[RS_EM_00014] [RS_EM_00015]
[RS_Main_00190]	Non-AUTOSAR Software Integration	[RS_EM_NA]
[RS_Main_00230]	Network Technology Support	[RS_EM_NA]
[RS_Main_00250]	AUTOSAR methodology shall provide a predefinition of typical roles and activities	[RS_EM_NA]
[RS_Main_00260]	Runtime Diagnostics Means	[RS_EM_NA]
[RS_Main_00261]	AUTOSAR shall provide means for calibration	[RS_EM_NA]
[RS_Main_00270]	Migration Strategies	[RS_EM_NA]
[RS_Main_00280]	Standardized Automotive Communication Protocols	[RS_EM_NA]
[RS_Main_00285]	AUTOSAR shall support protocols for Intelligent Transportation Systems	[RS_EM_NA]
[RS_Main_00300]	AUTOSAR shall provide data exchange formats to support work-share in large inter and intra company development groups	[RS_EM_NA]
[RS_Main_00301]	AUTOSAR shall specify profiles for data exchange to support work-share in large inter- and intra-company development groups	[RS_EM_NA]
[RS_Main_00310]	AUTOSAR shall support hierarchical Application Software design methods	[RS_EM_NA]
[RS_Main_00320]	AUTOSAR shall provide formats to specify system development	[RS_EM_00002] [RS_EM_00008]
[RS_Main_00340]	AUTOSAR shall support the continuous timing requirement analysis	[RS_EM_00005] [RS_EM_00052] [RS_EM_00100]
[RS_Main_00350]	Documented Software Architecture	[RS_EM_NA]
[RS_Main_00360]	Variant Management Support	[RS_EM_NA]
[RS_Main_00410]	AUTOSAR shall provide specifications for routines commonly used by Application Software to support sharing and optimization	[RS_EM_NA]
[RS_Main_00420]	AUTOSAR shall use established software standards and consolidate de-facto standards for basic software functionality	[RS_EM_00002] [RS_EM_00111]
[RS_Main_00440]	AUTOSAR shall standardize access to non-volatile memory	[RS_EM_NA]

Requirement	Description	Satisfied by
[RS_Main_00445]	AUTOSAR shall standardize access to crypto-specific HW and SW	[RS_EM_NA]
[RS_Main_00460]	AUTOSAR shall standardize methods to organize mode management on Application, ECU and System level	[RS_EM_00050] [RS_EM_00100] [RS_EM_00101] [RS_EM_00103]
[RS_Main_00480]	AUTOSAR shall support the test of implementations	[RS_EM_NA]
[RS_Main_00490]	AUTOSAR processes shall be compliant to ISO26262	[RS_EM_NA]
[RS_Main_00491]	Function Monitoring	[RS_EM_NA]
[RS_Main_00500]	AUTOSAR shall provide naming conventions	[RS_EM_NA]
[RS_Main_00501]	AUTOSAR shall support redundancy concepts	[RS_EM_00008] [RS_EM_00010] [RS_EM_00053] [RS_EM_00113]
[RS_Main_00503]	AUTOSAR shall support change of communication and application software at runtime.	[RS_EM_NA]
[RS_Main_00507]	Development Collaboration Support	[RS_EM_NA]
[RS_Main_00510]	Secure Onboard Communication	[RS_EM_NA]
[RS_Main_00511]	AUTOSAR shall support virtualization	[RS_EM_NA]
[RS_Main_00512]	AUTOSAR shall support time synchronization	[RS_EM_NA]
[RS_Main_00513]	AUTOSAR shall support language bindings for different programming languages	[RS_EM_NA]
[RS_Main_00514]	System Security Support	[RS_EM_00014] [RS_EM_00015] [RS_EM_00111]
[RS_Main_00650]	AUTOSAR shall support up - and download of data and software	[RS_EM_NA]
[RS_Main_00653]	Means for Functional Modeling	[RS_EM_NA]
[RS_Main_01001]	Intra ECU Communication Support	[RS_EM_NA]
[RS_Main_01002]	AUTOSAR shall support service-oriented communication	[RS_EM_NA]
[RS_Main_01003]	AUTOSAR shall support data-oriented communication	[RS_EM_NA]
[RS_Main_01004]	AUTOSAR shall support standards for wireless off-board communication	[RS_EM_NA]
[RS_Main_01005]	AUTOSAR shall establish communication paths dynamically	[RS_EM_NA]
[RS_Main_01007]	AUTOSAR communication shall assure quality of service on communication	[RS_EM_NA]
[RS_Main_01008]	AUTOSAR shall provide secure communication with off-board entities	[RS_EM_NA]

Requirement	Description	Satisfied by
[RS_Main_01025]	AUTOSAR shall support debugging of software on the target and onboard	[RS_EM_NA]
[RS_Main_01026]	AUTOSAR shall support tracing and profiling on the target and onboard	[RS_EM_NA]
[RS_SAF_21201]	Execution Management shall be implemented at least according the highest safety integrity level from any process that is supported on the platform.	[RS_EM_00002] [RS_EM_00009] [RS_EM_00103]
[RS_SAF_21202]	Execution Management shall support fully deterministic execution (time determinism and data determinism) so that higher ASIL levels can be achieved even when using parallel processing.	[RS_EM_00050] [RS_EM_00053]

## 5.1 Not applicable requirements

[RS\_EM\_NA]{DRAFT} [These requirements are not applicable as they are not within the scope of this release.] ([RS\\_Main\\_01026](#), [RS\\_Main\\_01025](#), [RS\\_Main\\_00650](#), [RS\\_Main\\_00026](#), [RS\\_Main\\_00030](#), [RS\\_Main\\_00140](#), [RS\\_Main\\_00160](#), [RS\\_Main\\_00161](#), [RS\\_Main\\_00190](#), [RS\\_Main\\_00230](#), [RS\\_Main\\_00250](#), [RS\\_Main\\_00260](#), [RS\\_Main\\_00261](#), [RS\\_Main\\_00270](#), [RS\\_Main\\_00280](#), [RS\\_Main\\_00285](#), [RS\\_Main\\_00300](#), [RS\\_Main\\_00301](#), [RS\\_Main\\_00310](#), [RS\\_Main\\_00350](#), [RS\\_Main\\_00360](#), [RS\\_Main\\_00410](#), [RS\\_Main\\_00440](#), [RS\\_Main\\_00445](#), [RS\\_Main\\_00480](#), [RS\\_Main\\_00490](#), [RS\\_Main\\_00491](#), [RS\\_Main\\_00500](#), [RS\\_Main\\_00503](#), [RS\\_Main\\_00507](#), [RS\\_Main\\_00510](#), [RS\\_Main\\_00511](#), [RS\\_Main\\_00512](#), [RS\\_Main\\_00513](#), [RS\\_Main\\_00653](#), [RS\\_Main\\_01001](#), [RS\\_Main\\_01002](#), [RS\\_Main\\_01003](#), [RS\\_Main\\_01004](#), [RS\\_Main\\_01005](#), [RS\\_Main\\_01007](#), [RS\\_Main\\_01008](#))
