|----|-----------------------------|----|
| 10 | Configuration specification | 25 |
| A | Not applicable requirements | 25 |

1 Introduction and functional overview

This document specifies the AUTOSAR standard types header file. It contains all types that are used across several modules of the basic software and that are platform and compiler independent.

It is strongly recommended that those standard types files are unique within the AUTOSAR community to guarantee unique types and to avoid types changes when changing from supplier A to B.

2 Acronyms and abbreviations

Acronyms and abbreviations that have a local scope are not contained in the AUTOSAR glossary. These must appear in a local glossary.

| Acronym: | Description: |
|----------|---|
| API | Application Programming Interface |
| OSEK/VDX | Offene Systeme und deren Schnittstellen fuer die Elektronik im Kraftfahrzeug |

| Abreviation: | Description: |
|--------------|--------------|
| STD | Standard |

- [6] ISO 17356-3: Road vehicles Open interface for embedded automotive applications – Part 3: OSEK/VDX Operating System (OS)

3.2 Related specification

AUTOSAR provides a General Specification on Basic Software modules [1, SWS BSW General], which is also valid for Standard Types.

Thus, the specification SWS BSW General shall be considered as additional and required specification for Standard Types.

Further specification:

[2, SRS SPALGeneral] [3, SWS RTE] [4, RS BSW General] [5, TR BSW General] [6, OSEK/VDX Operating System] [ISO/IEC 9899:1990]

4 Constraints and assumptions

4.1 Limitations

No limitations.

4.2 Applicability to car domains

Many symbols defined in this specification (like OK, NOT_OK, ON, OFF) are already defined and used within legacy software. These conflicts ('redefinition of existing symbol') are expected, but neglected, because of the following reasons:

1. AUTOSAR has to maintain network compatibility with legacy ECUs, but no software architecture compatibility with legacy software Many types are defined and used exactly in the same way that legacy software does. Legacy software can keep on using the symbols, only the definitions have to be removed and taken from this file instead.

5 Software Architecture

5.1 Dependencies to other modules

5.2 File structure

The include structures differ between BSW modules which are part of the COM-stack and other modules. BSW modules which is considered part of the COM stack shall include the ComStackTypes.h other modules shall include StandardTypes.h

5.2.1 Communication related BSW modules

[SWS_Std_00030] [The include file structure shall be as follows:

- ComStackTypes.h shall include StandardTypes.h
- Communication related basic software modules shall include ComStackTypes.h

](SRS_BSW_00024)

6 Requirements Tracing

The following tables reference the requirements specified in SRS BSW General [1] and links to the fulfillment of these. Please note that if column "Satisfied by" is empty for a specific requirement this means that this requirement is not fulfilled by this document.

| Requirement | Description | Satisfied by |
|------------------|---|---------------------------------|
| [SRS_BSW_00004] | All Basic SW Modules shall | [SWS_Std_00015] [SWS_Std_91003] |

14
15 #endif /* STD_TYPES_H */
```

```
](SRS_BSW_00059)
```

7.2 Error Classification

The section "Error Handling" of the document "General Specification of Basic Software Modules" describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.

7.2.1 Development Errors

There are no development errors.

7.2.2 Runtime Errors

There are no runtime errors.

7.2.3 Transient Faults

There are no transient faults.

7.2.4 Production Errors

There are no production errors.

7.2.5 Extended Production Errors

There are no extended production errors.

8 **API** specification

8.1 Type definitions

8.1.1 Std_ReturnType

[SWS_Std_00005] [

| Name | Std_ReturnType | | | |
|---------------|--|------|-----------------------------------|--|
| Kind | Туре | Туре | | |
| Derived from | uint8 | | | |
| Range | E_OK 0 see 8.2.1, SWS_Std_00006 | | | |
| | E_NOT_OK | 1 | see 8.2.1, SWS_Std_00006 | |
| | 0x02-0x3F | 2 | Available to user specific errors | |
| Description | This type can be used as standard API return type which is shared between the RTE and the BSW modules. It shall be defined as follows: | | | |
| | typedef uint8 Std_ReturnType; | | | |
| Available via | Std_Types.h | | | |

](SRS_BSW_00357)

[SWS_Std_00011] [The Std_ReturnType shall normally be used with value E_OK or E_NOT_OK. If those return values are not sufficient user specific values can be defined by using the 6 least specific bits.

For the naming of the user defined values the module prefix shall be used as requested in SRS_BSW_00441

Layout of the Std_ReturnType shall be as stated in the RTE specification. Bit 7 and Bit 8 are reserved and defined by the RTE specification.

(*SRS_BSW_00357, SRS_BSW_00441*)

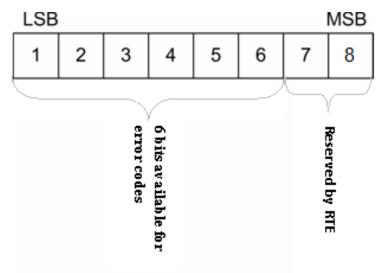

Figure 8.1: Layout of Std_Return_Type

8.1.2 Std_VersionInfoType

[SWS_Std_00015] [

| Name | Std_VersionInfoType | | |
|---------------|--|--------|--|
| Kind | Structure | | |
| Elements | vendorID | | |
| Liements | Туре | uint16 | |
| | Comment | - | |
| | moduleID | | |
| | Туре | uint16 | |
| | Comment | - | |
| | sw_major_version Type uint8 | | |
| | | | |
| | Comment | - | |
| | sw_minor_version | | |
| | Туре | uint8 | |
| | Comment | - | |
| | sw_patch_version | | |
| | Type uint8 | | |
| | Comment | - | |
| Description | This type shall be used to request the version of a BSW module using the <module name="">_Get VersionInfo() function.</module> | | |
| Available via | Std_Types.h | | |

](SRS_BSW_00004)

8.1.3 Std_TransformerError

The data type Std_TransformerError is a struct which contains the error code and the transformer class to which the error belongs.

The data type Std_TransformerError shall be defined as follows:

[SWS_Std_00021] [

| Name | Std_TransformerError | | | |
|---------------|--|--------------------------|--|--|
| Kind | Structure | | | |
| Elements | errorCode | errorCode | | |
| | Туре | Std_TransformerErrorCode | | |
| | Comment The specific meaning of the values of Std_TransformerErrorCode is to be seen for the specific transformer chain for which the data type represents the transformer error. | | | |
| | transformerClass | transformerClass | | |
| | Туре | Std_TransformerClass | | |
| | Comment – | | | |
| Description | Std_TransformerError represents a transformer error in the context of a certain transformer chain. | | | |
| Available via | Std_Types.h | | | |

](SRS_Xfrm_00004)

The values are specified for each transformer class in [26, ASWS Transformer General].

[SWS_Std_00022] [

| Name | Std_TransformerErrorCode | | | |
|---------------|---|-------|--|--|
| Kind | Туре | | | |
| Derived from | uint8 | uint8 | | |
| Range | - The values are specified for each transformer class in ASWS_TransformerGeneral. | | | |
| Description | The type of the Std_TransformerError. | | | |
| Available via | Std_Types.h | | | |

](SRS_Xfrm_00004, SRS_Xfrm_00008)

The Std_TransformerClass represents the transformer class in which the error occurred.

[SWS_Std_00023] [The underlying data type of the type Std_TransformerClass shall be uint8.] (*SRS_Xfrm_00009, SRS_Xfrm_00008*)

The type Std_TransformerClass shall be an enumeration with the following elements where each element represents a transformer class:

| Name | Std_TransformerClass | | | |
|---------------|--|------|------------------------------------|--|
| Kind | Туре | | | |
| Derived from | uint8 | | | |
| Range | STD_TRANSFORMER_ UNSPECIFIED0x00Transformer of a unspecified transformer class. | | | |
| | STD_TRANSFORMER_ SERIALIZER | 0x01 | Transformer of a serializer class. | |
| | STD_TRANSFORMER_SAFETY 0x02 Transformer of a safety class | | | |
| | STD_TRANSFORMER_ SECURITY | 0x03 | Transformer of a security class. | |
| | STD_TRANSFORMER_CUSTOM 0xFF Transformer of a custom class not standardized by AUTOSAR. | | | |
| Description | - | | | |
| Available via | Std_Types.h | | | |

[SWS_Std_00024] [

(*SRS_Xfrm_00004*, *SRS_Xfrm_00010*)

[SWS_Std_00025] [The transformer class STD_TRANSFORMER_UNSPECIFIED shall be used if no transformer error occured.] (*SRS_Xfrm_00004*)

[SWS_Std_00026] [The mapping from transformerClass of TransformationTechnology to value of data type Std_TransformerClass shall be:

- transformerClass serializer STD_TRANSFORMER_SERIALIZER
- transformerClass safety STD_TRANSFORMER_SAFETY

- transformerClass security STD_TRANSFORMER_SECURITY
- transformerClass custom STD_TRANSFORMER_CUSTOM

(SRS_Xfrm_00011)

8.1.4 Std_TransformerForward

The data type Std_TransformerForward is a struct which contains the forwarded status and the transformer class to which the forwarded status applies.

The data type Std_TransformerForward shall be defined as follows:

| Name | Std_TransformerForward (draft) | | | |
|---------------|--------------------------------|----------------------------|--|--|
| Kind | Structure | | | |
| Elements | errorCode | errorCode | | |
| | Туре | Std_TransformerForwardCode | | |
| | Comment | Comment – | | |
| | transformerClass | transformerClass | | |
| | Туре | Type Std_TransformerClass | | |
| | Comment – | | | |
| Description | - | | | |
| | Tags: atp.Status=draft | | | |
| Available via | Std_Types.h | | | |

[SWS_Std_00027]{DRAFT} [

](*SRS_Xfrm_00002*) The Std_TransformerForward represents a forwarded transformer status in the context of a certain transformer chain. The specific meaning of the values of Std_TransformerForward are always to be seen for the specific transformer chain for which the data type represents the transformer status.

[SWS_Std_00028]{DRAFT} [

A safety transformer shall handle the forwarded status according to table 8.1.

](SRS_Xfrm_00002)

| Error Name | Error Code | Description |
|----------------------|------------|---------------------------------------|
| E_OK | 0x00 | No specific error to be injected |
| E_SAFETY_INVALID_REP | 0x01 | Repeat the last used sequence number. |
| E_SAFETY_INVALID_CRC | 0×03 | Generate a deliberately wrong CRC. |
| E_SAFETY_INVALID_SEQ | 0x02 | Use a wrong sequence number. |

Table 8.1: Safety Transformer Error Codes

The underlying data type of the type Std_TransformerForwardCode shall be uint8:

[SWS_Std_00029]{DRAFT} [

| Name | Std_TransformerForwardCode (draft) | | | |
|---------------|------------------------------------|------|--|--|
| Kind | Туре | Туре | | |
| Derived from | uint8 | | | |
| Range | E_OK 0x00 - | | | |
| | E_SAFETY_INVALID_REP 0x01 - | | | |
| | E_SAFETY_INVALID_SEQ 0x02 - | | | |
| | E_SAFETY_INVALID_CRC 0x03 - | | | |
| Description | - | | | |
| | Tags: atp.Status=draft | | | |
| Available via | Std_Types.h | | | |

](SRS_Xfrm_00002)

8.1.5 Std_MessageTypeType

[SWS_Std_91001] [

| Name | Std_MessageTypeType | | | |
|---------------|---|------|-------------------------------------|--|
| Kind | Туре | | | |
| Derived from | uint8 | | | |
| Range | STD_MESSAGETYPE_ 0x00 Message type for a request message REQUEST 0x00 Message type for a request message | | | |
| | STD_MESSAGETYPE_ RESPONSE | 0x01 | Message type for a response message | |
| | 0x02-0x3F | 0x02 | reserverd for future message type | |
| Description | This type is used to encode the different type of messages Currently this encoding is limited to the distinction between requests and responses in C/S communication. | | | |
| Available via | Std_Types.h | | | |

](SRS_BSW_00305)

[SWS_Std_00017] [The Std_MessageTypeType shall be used ot encode the different types of messages exchanged in AUTOSAR. - Currently this encoding is limited to the distinction between requests and responses in C/S communication.] *(SRS_BSW_-00305)*

Note: In future AUTOSAR release, the literals for this type may be extended with additional message types.

8.1.6 Std_MessageResultType

```
[SWS_Std_91002] [
```

| Name | Std_MessageResultType | | | |
|---------------|--|------|-------------------------------------|--|
| Kind | Туре | | | |
| Derived from | uint8 | | | |
| Range | STD_MESSAGERESULT_OK 0x00 STD_MESSAGERESULT_OK | | | |
| | STD_MESSAGERESULT_ ERROR | 0x01 | Messageresult for an ERROR response | |
| | 0x02-0x3F 0x02 reserverd for future message results | | | |
| Description | This type is used to encode different types of results for response messages Currently this encoding is limited to the distinction between OK and ERROR responses. | | | |
| Available via | Std_Types.h | | | |

](SRS_BSW_00305)

[SWS_Std_00019] [The Std_MessageResultType shall be used ot encode the different types of results for response messages. - Currently this encoding is limited to the distinction between OK and ERROR responses.] (SRS_BSW_00305)

Note: In future AUTOSAR release, the literals for this type may be extended with additional result types.

8.1.7 Std_ExtractProtocolHeaderFieldsType

[SWS_Std_91003] [

| Name | Std_ExtractProtocolHeaderFieldsType | | | |
|--------------------|---|---|--|--|
| Kind | Function Pointer | Function Pointer | | |
| Syntax | <pre>Std_ReturnType (*Std_ExtractProtocolHeaderFieldsType) (const uint8* buffer, uint32 bufferLength, Std_MessageTypeType* messageType, Std_MessageResultType* messageResult)</pre> | | | |
| Parameters (in) | buffer Buffer allocated by the RTE, where the transformed data has to be stored by the transformer | | | |
| | bufferLength Length of the buffer | | | |
| Parameters (inout) | None | | | |
| Parameters (out) | messageType Canonical representation of the message type (extracted from the transformers protocol header). | | | |
| | messageResult | essageResult Canonical representation of the message result type (extracted from the transformers protocol header). | | |
| Return value | Std_ReturnType - | | | |
| Description | Type for the function pointer to extract the relevant protocol header fields of the message and the type of the message result of a transformer At the time being, this is limited to the types used for C/S communication (i.e., REQUEST and RESPONSE and OK and ERROR). | | | |
| Available via | Std_Types.h | | | |

](SRS_BSW_00004)

8.2 Symbol definitions

8.2.1 E_OK, E_NOT_OK

[SWS_Std_00006] [

| Name | E_OK, E_NOT_OK | | |
|---------------|---|-------|---|
| Kind | Enumeration | | |
| Range | E_OK | 0x00u | - |
| | E_NOT_OK | 0x01u | - |
| Description | Because E_OK is already defined within OSEK, the symbol E_OK has to be shared. To avoid name clashes and redefinition problems, the symbols have to be defined in the following way (approved within implementation): | | |
| | #ifndef STATUSTYPEDEFINED #define STATUSTYPEDEFINED #define E_OK 0x00u | | |
| | typedef unsigned char StatusType; /* OSEK compliance */ #endif | | |
| | #define E_NOT_OK 0x01u | | |
| Available via | Std_Types.h | | |

](SRS_BSW_00357)

8.2.2 STD_HIGH, STD_LOW

[SWS_Std_00007] [

| Name | STD_HIGH, STD_LOW | | |
|---------------|---|-------|---|
| Kind | Enumeration | | |
| Range | STD_LOW 0x00u - | | |
| | STD_HIGH | 0x01u | - |
| Description | The symbols STD_HIGH and STD_LOW shall be defined as follows: | | |
| | #define STD_HIGH 0x01u /* Physical state 5V or 3.3V */ #define STD_LOW 0x00u /* Physical state 0V */ | | |
| Available via | Std_Types.h | | |

](SRS_BSW_00348)

8.2.3 STD_ACTIVE, STD_IDLE

[SWS_Std_00013] [

| Name | STD_ACTIVE, STD_IDLE | |
|------|----------------------|--|
| Kind | Enumeration | |
| | | |

 \bigtriangledown

| \bigtriangleup | | | | |
|------------------|--|-------|---|--|
| Range | STD_IDLE | 0x00u | - | |
| | STD_ACTIVE | 0x01u | - | |
| Description | The symbols STD_ACTIVE and STD_IDLE shall be defined as follows: | | | |
| | #define STD_ACTIVE 0x01u /* Logical state active */ #define STD_IDLE 0x00u /* Logical state idle */ | | | |
| Available via | Std_Types.h | | | |

](SRS_BSW_00348)

8.2.4 STD_ON, STD_OFF

[SWS_Std_00010] [

| Name | STD_ON, STD_OFF | | |
|---------------|---|-------|---|
| Kind | Enumeration | | |
| Range | STD_OFF 0x00u – | | |
| | STD_ON | 0x01u | - |
| Description | The symbols STD_ON and STD_OFF shall be defined as follows: | | |
| | #define STD_ON 0x01u #define STD_OFF 0x00u | | |
| Available via | Std_Types.h | | |

](SRS_BSW_00348)

8.2.5 NULL_PTR

[SWS_Std_00031] [

| Define | NULL_PTR | |
|-------------|--|--------------------------------------|
| Range | void pointer | ((void *)0) |
| Description | The compiler abstraction shall provide the NULL_PT definition. | R define with a void pointer to zero |
