# 1 Introduction

This specification specifies functionality, API and configuration of the module LIN transceiver driver. It is responsible to handle the LIN transceiver hardware on an ECU.

A LIN bus transceiver is a hardware device. It is the interface between LIN protocol controller and physical LIN bus. On one hand the transmit data stream of a LIN protocol controller is converted into LIN physical layer compliant bus signals. On the other hand LIN bus data streams are converted into protocol controller input signals. A LIN protocol controller is typically a microcontroller implementation.

Most LIN transceivers support power supply control and wakeup via the bus. A lot of different wakeup/sleep and power supply concepts are available on the market.

In addition so called system basis chips (SBC) are available. Beside LIN transceiver functionalities these devices provide additional features, e.g. detection of electrical malfunctions (e.g. short-circuit to dominant level (GND)), power supply control, advanced watchdogs, LIN transceiver, SPI etc.

## 1.1 Goal of LIN transceiver driver

The target of this document is to specify interfaces and behaviour, which are applicable to most current LIN transceiver hardware implementations.

**[SWS\_LinTrcv\_00042]** Gamma The LIN transceiver driver abstracts the applied LIN transceiver hardware and covers hardware independent interfaces to the higher layers. It abstracts also from ECU layout by using APIs of MCAL layer to access LIN transceiver hardware.](SRS\_BSW\_00162)

# **1.2 Explicitly uncovered LIN transceiver functionality**

Some LIN bus transceivers offer additional functionality like ECU self test or error detection capability for diagnostics.

ECU self test and error detection are not defined within AUTOSAR and requiring such functionality in general would lock out most currently used transceiver hardware chips. Therefore, features like "ground shift detection", "selective wakeup", "slope control" and others are not supported.

# 2 Acronyms and abbreviations

| Abbreviation | Description  |
|--------------|--|
| API          | Application Program Interface  |
| Channel      | A channel is a software exchange medium for data that are defined with the same criteria.  |
| ComM         | Communication Manager  |
| Det          | Default Error Tracer   |
| Dio/DIO      | Digital input output, one of the SPAL SW modules   |
| EcuM         | ECU State Manager  |
| ECU          | Electronic Control Unit  |
| Frt          | Free Running Timer   |
| Gpt          | General purpose Timer  |
| ICU          | Interrupt Control Unit   |
| ISR          | Interrupt Service Routine  |
| LinTrcv      | Lin Transceiver Driver   |
| MCAL         | Micro Controller Abstraction Layer   |
| n/a          | Not applicable   |
| PDU          | Protocol Data Unit   |
| SBC          | System Basis Chip; a device, which integrates e.g. LIN and/or LIN transceiver, watchdog and power control.   |
| SPAL         | Standard Peripheral Abstraction Layer  |
| SW           | Software   |
| SPI          | Serial Peripheral Interface  |
| SPI Channel  | A channel is a software exchange medium for data that are defined with the same criteria: configuration parameters, number of data elements with same size and data pointers (source & destination) or location. See specification of SPI driver for more details. |
| SPI Job      | A job is composed of one or several channels with the same chip select. A job is considered to be atomic and therefore cannot be interrupted. A job has also an assigned priority. See specification of SPI driver for more details.                               |
| SPI Sequence | A sequence is a number of consecutive jobs to be transmitted. A sequence depends on a static configuration. See specification of SPI driver for more details.  |

## 3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [6] (SWS BSW General), which is also valid for LIN Transceiver Driver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for LIN Transceiver Driver.

# 4 Constraints and assumptions

## 4.1 Limitations

The used APIs of underlying drivers like DIO or SPI shall be synchronous. Implementations of underlying drivers, which do not support synchronous behavior, cannot be used together with LIN transceiver driver.

## 4.2 Applicability to car domains

This driver might be applicable in all car domains using LIN for communication.

# 5 Dependencies to other modules

| Module | Dependencies   |
|--------|--|
| Linlf  | All LIN transceiver drivers are arranged below Linlf.  |
| ComM   | ComM steers LIN transceiver driver communication modes via Linlf. Independent steering of each single LIN transceiver channel is possible. |
| Det    | Det gets development error information from LIN transceiver driver.  |
| Dio    | Dio module is used to access LIN transceiver hardware connected via ports.   |
| EcuM   | EcuM gets wakeup information from LIN transceiver driver via Linlf.  |
| lcu    | Icu module might perform LIN transceiver hardware interrupts.  |
| Spi    | Spi module is used to access LIN transceiver hardware connected via Spi  |

## 5.1 File structure

#### 5.1.1 Naming convention for transceiver driver implementation

**[SWS\_LinTrcv\_00070]** In case different LIN transceiver hardware implementations are used in one ECU the function names of the different LIN transceiver drivers must be modified such that no two functions with the same names are generated. The names may be extended with a vendor ID or a type ID. (SRS\_BSW\_00347)

#### 5.1.2 Code file structure

For details, refer to the section 5.1.6 "Code file structure" of the SWS BSW General [6].

#### 5.1.3 Header file structure

[SWS\_LinTrcv\_00067] [The include file structure shall be as follows

LinTrcv.c shall include Det.h (needed to notify about development errors) if development error detection for the module LinTrcv is enabled. LinTrcv.c shall include Dio.h (DIO APIs needed to access Transceiver pins)

LinTrcv.c shall include Icu.h (if ICU APIs needed to perform LIN transceiver hardware interrupts)

LinTrcv.c shall include Spi.h (if the LIN bus transceiver driver use drivers for Spi to control the LIN bus transceiver hardware)

LinTrcv.c shall include Tm.h (needed for wait states for changing transceiver operation modes)

J(SRS\_BSW\_00301, SRS\_BSW\_00409)

# 7 Functional specification

## 7.1 LIN transceiver driver operation modes

[SWS\_LinTrcv\_00055] The LIN transceiver driver operation modes are described in the state diagram below.](SRS\_Lin\_01566, SRS\_Lin\_01524, SRS\_Can\_01098, SRS\_Can\_01099, SRS\_Can\_01100)

The main idea behind this diagram is to support the majority of available LIN bus transceivers in a common model view. Depending on the LIN transceiver hardware, the model may have one or two states more than necessary for a given LIN transceiver hardware, but this will clearly decouple the ComM and EcuM from the used hardware.

Lin Transceiver Operation Modes 7-1

Hint: There are several optional interfaces that might not be needed for current LIN transceiver hardware. E.g. the mode "LINTRCV\_TRCV\_MODE\_STANDBY" might be only an internal state that is used for internal hardware transitions. Especially if functionality of "inhibit pin" is used to control the uC only the states "LINTRCV\_TRCV\_MODE\_SLEEP" and "LINTRCV\_TRCV\_MODE\_NORMAL" are of interest.

| State                  | Description  |
|------------------------|--|
| POWER_ON               | MCU is fully powered.                              |
| NOT_ACTIVE             | State of LIN transceiver hardware depend on        |
|                        | ECU hardware and on Dio and Port driver            |
|                        | configuration. LIN transceiver driver is not       |
|                        | initialized and therefore not active.              |
| ACTIVE                 | The function LinTrcv_Init() was called. It carries |
|                        | LIN transceiver driver to active state. LIN        |
|                        | transceiver driver enters state                    |
|                        | LINTRCV_TRCV_MODE_SLEEP.                           |
| LINTRCV_TRCV_MODE_NOR  | Full bus communication. If LIN transceiver         |
| MAL                    | hardware controls MCU power supply, MCU is         |
|                        | fully powered. The LIN transceiver driver detects  |
|                        | no further wakeup information.                     |
| LINTRCV_TRCV_MODE_STA  | No communication is possible. If LIN transceiver   |
| NDBY                   | hardware controls MCU power supply, the MCU        |
|                        | is still powered. A wakeup by bus or by a local    |
|                        | wakeup event is possible.                          |
|                        | Note: This is an optional state.                   |
| LINTRCV_TRCV_MODE_SLEE | No communication is possible. If LIN transceiver   |
| P                      | hardware controls MCU power supply, the MCU        |
|                        | is not powered. A wakeup by bus or by a local      |
|                        | wakeup event is possible.                          |

If a LIN transceiver driver covers more than one LIN channel, all channels are either in state NOT\_ACTIVE or in state ACTIVE. In state ACTIVE each channel may be in a different sub state.

## 7.2 LIN transceiver hardware operation modes

The LIN transceiver hardware may support more mode transitions than the software. The dependencies and the recommended implementations behaviour are explained in this chapter.

It is up to the implementation to decide which LIN transceiver hardware state is covered by which LIN transceiver driver software state. An implementation has to guarantee that whole functionality of described LIN transceiver driver is given by the implementation.

## 7.3 LIN transceiver wakeup types

There are four different scenarios, which are often called wakeup:

- MCU is not powered, parts of ECU including LIN transceiver hardware are powered. The considered LIN transceiver hardware is in mode LINTRCV\_TRCV\_MODE\_SLEEP. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware causes powering of MCU (e.g. via pin "inhibit"). In terms of AUTOSAR this is kept as a cold start and not as a wakeup.
- 2) MCU is in low power mode, parts of ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode LINTRCV\_TRCV\_MODE\_STANDBY or LINTRCV\_TRCV\_MODE\_SLEEP. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware is informing MCU about wakeup. In terms of AUTOSAR this is kept as a wakeup of the LIN channel and of the MCU.
- 3) MCU is in full power mode, at least parts of the ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode LINTRCV\_TRCV\_MODE\_STANDBY or LINTRCV\_TRCV\_MODE\_SLEEP. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware is informing MCU about wakeup or is polled cyclically for wakeup events. In terms of AUTOSAR this is kept as a wakeup of a LIN channel.
- 4) MCU is in full power mode, at least parts of the ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode LINTRCV\_TRCV\_MODE\_STANDBY or LINTRCV\_TRCV\_MODE\_SLEEP. The MCU is now setting the LIN transceiver hardware to mode LINTRCV\_TRCV\_MODE\_NORMAL and is waking up the LIN channel. In terms of AUTOSAR this is kept as an internal wakeup of a LIN channel (through MCU).

## 7.4 LIN transceiver wakeup modes

**[SWS\_LinTrcv\_00066]** FWakeup notification must be supported by Lin Transceiver driver, therefore LIN transceiver driver covers 2 wakeup modes, internal wakeup by an upper layer or external wakeup by LIN channel. (SRS\_Lin\_01514, SRS\_Lin\_01563)

- Internal wakeup An internal wakeup is initiated by an upper layer, e.g. by calling LinTrcv\_Init() or LinTrcv\_SetOpMode.
- External wakeup Wakeup detected by LIN transceiver driver is forwarded to the upper layer through the API LinTrcv\_CheckWakeup which has to be called by the LinIf.

Hint: WakeUp through ISR is not supported by the Lin Transceiver Driver but is only possible through ICU.

[SWS\_LinTrcv\_00074] Selection of wakeup mode shall be done by configuration parameter LinTrcvWakeUpSupport.](SRS\_Lin\_01580)

[SWS\_LinTrcv\_00075] Support of wakeup shall be switched on and off for each LIN transceiver channel individually by configuration parameter LinTrcvWakeupByBusUsed.](SRS\_Lin\_01580)

**[SWS\_LinTrcv\_00161]** [LinTrcv driver shall use the following APIs provided by ICU driver, to enable and disable the wakeup event notification:

- Icu\_EnableNotification
- Icu\_DisableNotification ()

**[SWS\_LinTrcv\_00162]** [LinTrcv driver shall enable the ICU channels when the transceiver transmits to standby mode (LINTRCV\_STANDBY) ()

**[SWS\_LinTrcv\_00163]** [LinTrcv driver shall disable the ICU channels when the transceiver transmits to Normal mode (LINTRCV\_NORMAL)]()

Rationale: LinTrcv driver shall avoid the loss of wakeup events.

## 7.5 Error classification

Section 7.2 "Error Handling" of the document "General Specification of Basic Software Modules" describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.

#### 7.5.1 Development Errors

#### [SWS\_LinTrcv\_00050][

| Type of error                                   | Related error code                | Error<br>value |
|---|-----------------------------------|----------------|
| API called with wrong parameter for LIN network | LINTRCV_E_INVALID_LIN_<br>NETWORK | 0x01           |
| API called with null pointer parameter          | LINTRCV_E_PARAM_<br>POINTER       | 0x02           |
| API service used without initialization         | LINTRCV_E_UNINIT                  | 0x11           |

| API service called in wrong transceiver operation mode                          | LINTRCV_E_TRCV_NOT_<br>SLEEP      | 0x21 |
|---|-----------------------------------|------|
| API service called in wrong transceiver operation mode                          | LINTRCV_E_TRCV_NOT_<br>NORMAL     | 0x22 |
| API service called with invalid mode because optional transition is not enabled | LINTRCV_E_INVALID_TRCV_<br>OPMODE | 0x25 |

J(SRS\_BSW\_00327, SRS\_BSW\_00385, SRS\_BSW\_00386)

#### 7.5.2 Runtime Errors

There are no runtime errors.

#### 7.5.3 Transient Faults

There are no transient faults.

#### 7.5.4 Production Errors

There are no production errors.

#### 7.5.5 Extended Production Errors

There are no extended production errors.

## 7.6 Preconditions for driver initialization

**[SWS\_LinTrcv\_00099]** The LIN bus transceiver driver might use drivers for Dio or Spi to control the LIN bus transceiver hardware. Thus these drivers must be available and ready to operate before the LIN bus transceiver driver is initialized. ()

The LIN transceiver driver may have timing requirements for the initialization sequence and the access to the transceiver device, which must be fulfilled by these used underlying drivers.

The timing requirements might be that

The call of the LIN bus transceiver driver initialization has to be performed very early after power up to be able to read all necessary information out of the transceiver hardware in time for all other users within the ECU.

The runtime of the used underlying services is very short and synchronous to enable the driver to keep his own timing requirements limited by the used hardware device. The runtime of the driver may be enlarged, as some hardware devices have the need to have the port pin level valid for e.g. 50µs before changing it again to reach a specific state, e.g. sleep.

## 7.7 Instance concept

**[SWS\_LinTrcv\_00016]** For each LIN transceiver hardware type an ECU has one LIN transceiver driver instance. One instance serves all LIN transceiver hardware of the same type. J(SRS\_BSW\_00347, SRS\_BSW\_00413)

## 7.8 Wait states

For changing operation modes, the LIN transceiver hardware may have to perform wait states.

[SWS\_LinTrcv\_00171] The LIN Transceiver Driver shall use the Time service

Tm\_BusyWait1us16bit to realize the wait time for transceiver state changes. ()

## 8.3 Function definitions

## 8.3.1 LinTrcv\_Init

#### [SWS\_LinTrcv\_00001][

| Service Name          | LinTrcv_Init   |  |
|-----------------------|--|--|
| Syntax                | <pre>void LinTrcv_Init (     const LinTrcv_ConfigType* ConfigPtr )</pre> |  |
| Service ID [hex] 0x00 |  |  |
| Sync/Async            | Synchronous  |  |
| Reentrancy            | Non Reentrant  |  |
| Parameters (in)       | ConfigPtr  | Pointer to the selected configuration set. |
| Parameters (inout)    | None   |  |
| Parameters (out)      | None   |  |
| Return value          | None   |  |
| Description           | Initializes the Lin Transceiver Driver module.                           |  |
| Available via         | LinTrcv.h  |  |

J(SRS\_BSW\_00310, SRS\_BSW\_00358, SRS\_BSW\_00414, SRS\_BSW\_00101, SRS\_Can\_01096, SRS\_Can\_01097)

[SWS\_LinTrcv\_00173] The Configuration pointer configPtr shall always have a

NULL\_PTR value (SRS\_BSW\_00414)

The Configuration pointer configPtr is currently not used and shall therefore be set NULL\_PTR value.

#### [SWS\_LinTrcv\_00119]

The function LinTrcv\_Init shall set the LIN transceiver hardware to the state LINTRCV\_TRCV\_MODE\_SLEEP.

J()

Caveats:

The initialization sequence after reset (e.g. power up) is a critical phase for the LIN transceiver driver. The driver will use SPAL functionality (DIO) to access the transceiver hardware. Therefore all necessary BSW drivers must be initialized and usable before.

## 8.3.2 LinTrcv\_SetOpMode

| [SWS_LinTrcv_00002][  |   |   |  |
|-----------------------|---|---|--|
| Service Name          | LinTrcv_SetOpMode   |   |  |
| Syntax                | <pre>Std_ReturnType LinTrcv_SetOpMode (     uint8 LinNetwork,     LinTrcv_TrcvModeType OpMode )</pre> |   |  |
| Service ID<br>[hex]   | 0x01  |   |  |

LinTrcv\_GetOpMode shall report the development error LINTRCV\_E\_UNINIT.J()

**[SWS\_LinTrcv\_00124]** [If development error detection for the module LinTrcv is enabled:

If called with an invalid network number LinNetwork, the function

LinTrcv\_GetOpMode shall report the development error

LINTRCV\_E\_INVALID\_LIN\_NETWORK. )()

**[SWS\_LinTrcv\_00125]** [If development error detection for the module LinTrcv is enabled:

If called with OpMode == NULL, the function LinTrcv\_GetOpMode shall report the development error LINTRCV E PARAM POINTER. ()

Configuration:

The number of supported busses is statically set in the configuration phase.

#### 8.3.4 LinTrcv\_GetBusWuReason

| Service<br>Name       | LinTrcv_GetBusWuReason   |   |  |
|-----------------------|--|---|--|
| Syntax                | <pre>Std_ReturnType LinTrcv_GetBusWuReason (     uint8 LinNetwork,     LinTrcv_TrcvWakeupReasonType* Reason )</pre>  |   |  |
| Service ID<br>[hex]   | 0x03   |   |  |
| Sync/Async            | Synchronous  |   |  |
| Reentrancy            | Reentrant  |   |  |
| Parameters<br>(in)    | LinNetwork   | LIN network to which API call has to be applied   |  |
| Parameters<br>(inout) | None   |   |  |
| Parameters<br>(out)   | Reason   | Pointer to wakeup reason of the bus the API is applied to.  |  |
| Return value          | Std_ReturnType   | E_OK: will be returned if the wake up reason is detected<br>E_NOT_OK: will be returned, if service request is failed due to<br>wakeup reason is not detected. |  |
| Description           | This API provides the reason for the wakeup that the LIN transceiver has detected in the parameter "Reason". The ability to detect and differentiate the possible wakeup reasons depends strongly on the LIN transceiver hardware. |   |  |
| Available via         | LinTrcv.h  |   |  |

[SWS LinTrcv 00007][

J(SRS\_BSW\_00310, SRS\_BSW\_00369, SRS\_BSW\_00377, SRS\_BSW\_00406, SRS\_Can\_01097, SRS\_Can\_01103)

[SWS\_LinTrcv\_00126] [The function LinTrcv\_GetBusWuReason shall return the reason for the wake up that the LIN transceiver has detected in the parameter Reason\_()

[SWS\_LinTrcv\_00127] [If there is no/incorrect communication to the transceiver, the

function LinTrcv\_GetBusWuReason shall return E\_NOT\_OK.」()

**[SWS\_LinTrcv\_00128]** [If development error detection for the module LinTrcv is enabled:

If called before the LinTrcv module has been initialized, the function

LinTrcv\_GetBusWuReason shall report development error LINTRCV\_E\_UNINIT.] ()

**[SWS\_LinTrcv\_00129]** [If development error detection for the module LinTrcv is enabled:

If called with an invalid network number LinNetwork, the function LinTrcv\_GetBusWuReason shall report development error

LINTRCV\_E\_INVALID\_LIN\_NETWORK. J()

**[SWS\_LinTrcv\_00130]** If development error detection for the module LinTrcv is enabled:

If called with Reason == NULL, the function LinTrcv\_GetBusWuReason shall report the development error LINTRCV E PARAM POINTER. ()

Configuration:

The number of supported busses is statically set in the configuration phase.

Caveats:

Be aware that if more than one bus is available each bus may report a different wakeup reason. E.g. if an ECU has LIN, a wakeup by LIN may occur and the incoming data may cause an internal wakeup for another LIN bus. The LIN transceiver driver has a "per bus" view and does not vote the more important reason or sequence internally. The same may be true if e.g. one transceiver controls the power supply and the other is just powered or un-powered.

### 8.3.5 LinTrcv\_GetVersionInfo

| [SWS_LinTrcv_    | [SWS_LinTrcv_00008][   |  |  |
|------------------|--|--|--|

## 8.4 Scheduled functions

This chapter lists all functions provided by the LinTrcv module and called directly by the Basic Software Module Scheduler. There are no cyclical called functions provided by Lin Transceiver Driver.

## 8.5 Call-back notifications

There are no callback notifications provided by Lin Transceiver Driver.

## 8.6 Expected Interfaces

In this chapter all interfaces required from other modules are listed.

### 8.6.1 Mandatory Interfaces

This chapter defines all interfaces which are required to fulfill the core functionality of the module.

| API Function                  | Header<br>File | Description  |  |
|-------------------------------|----------------|--|--|
| Linlf_Wakeup-<br>Confirmation | Linlf.h        | The LIN Driver or LIN Transceiver Driver will call this function to report the wake up source after the successful wakeup detection during CheckWakeup or after power on by bus. |  |

```
[SWS_LinTrcv_91002][
```

]()

### 8.6.2 Optional Interfaces

This chapter defines all interfaces which are required to fulfill an optional functionality of the module.

### [SWS\_LinTrcv\_91003]

| API Function                 | Header<br>File | Description   |  |
|------------------------------|----------------|---|--|
| Det_ReportError              | Det.h          | Service to report development errors.   |  |
| Dio_ReadChannel              | Dio.h          | Returns the value of the specified DIO channel.   |  |
| Dio_Read-<br>ChannelGroup    | Dio.h          | This Service reads a subset of the adjoining bits of a port.  |  |
| Dio_ReadPort                 | Dio.h          | Returns the level of all channels of that port.   |  |
| Dio_WriteChannel             | Dio.h          | Service to set a level of a channel.  |  |
| Dio_WriteChannel-<br>Group   | Dio.h          | Service to set a subset of the adjoining bits of a port to a specified level.                                       |  |
| Dio_WritePort                | Dio.h          | Service to set a value of the port.   |  |
| EcuM_Set-<br>WakeupEvent     | EcuM.h         | Sets the wakeup event.  |  |
| Icu_Disable-<br>Notification | lcu.h          | This function disables the notification of a channel.   |  |
| Icu_Enable-<br>Notification  | lcu.h          | This function enables the notification on the given channel.  |  |
| Spi_GetStatus                | Spi.h          | Service returns the SPI Handler/Driver software module status.  |  |
| Spi_ReadIB                   | Spi.h          | Service for reading synchronously one or more data from an IB SPI<br>Handler/Driver Channel specified by parameter. |  |
| Spi_SetupEB                  | Spi.h          | Service to setup the buffers and the length of data for the EB SPI<br>Handler/Driver Channel specified.             |  |
| Spi_SyncTransmit             | Spi.h          | Service to transmit data on the SPI bus   |  |
| Spi_WriteIB                  | Spi.h          | Service for writing one or more data to an IB SPI Handler/Driver<br>Channel specified by parameter.                 |  |
| Tm_Busy-<br>Wait1us16bit     | Tm.h           | Performs busy waiting by polling with a guaranteed minimum waiting time.  |  |

]()

[SWS\_LinTrcv\_00165] [LinTrcv driver shall enable/disable ICU channels only if reference is configured for the parameter LinTrcvIcuChannelRef.]()

### 8.6.3 Configurable interfaces

There are no configurable interfaces for LIN transceiver driver.

# 9 Sequence diagrams

For all wakeup related sequence diagrams please refer to chapter 9 of ECU State Manager.

# **10** Configuration specification

In general this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals.

Chapter 10.2 specifies the structure (containers) and the parameters of the module LinTrcv.

Chapter 10.3 specifies published information of the module LinTrcv.

## 10.1 How to read this chapter

For details refer to the chapter 10.1 "Introduction to configuration specification" in *SWS\_BSWGeneral.* 

**[SWS\_LinTrcv\_00174]** [The LIN Transceiver Driver module shall reject configurations with partition mappings which are not supported by the implementation.]()

### **10.2 Containers and configuration parameters**

The following chapters summarize all configuration parameters. The detailed meanings of the parameters are described in preceding chapters.

#### 10.2.1 Variants

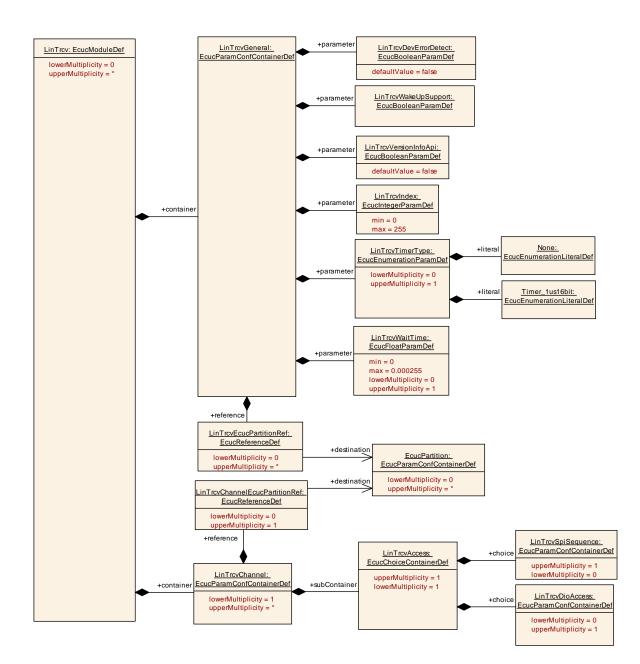

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapters 7 and Chapter 8.

#### 10.2.2 LinTrcv

| SWS Item                   | [ECUC_LinTrcv_00161]                           |  |

#### [SWS\_LinTrcv\_00176] [The ECUC partitions referenced by

LinTrcvChannelEcucPartitionRef shall be a subset of the ECUC partitions referenced by LinTrcvEcucPartitionRef .()

**[SWS\_LinTrcv\_00178]** [If LinTrcvEcucPartitionRef references one or more ECUC partitions, LinTrcvChannelEcucPartitionRef shall have a multiplicity of one and reference one of these ECUC partitions as well.]()

**[SWS\_LinTrcv\_00177]** [LinTrcvChannel and LinChannel of one communication channel shall all reference the same ECUC partition.]()

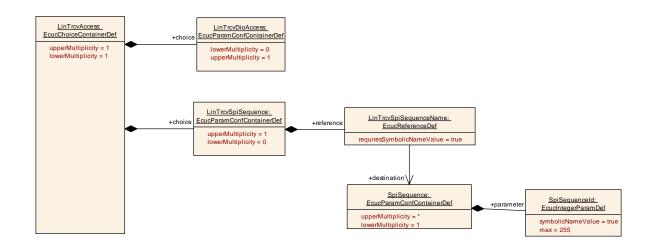

### 10.2.5 LinTrcvAccess

| SWS Item         | [ECUC_LinTrcv_00154] |
|------------------|----------------------|
| Choice Container | LinTrcvAccess        |

| Name             |   |
|------------------|---|
| Parent Container | LinTrcvChannel  |
| Description      | Container gives LIN transceiver driver access about a single LIN transceiver channel. |

| Container Choices       |              |   |  |
|-------------------------|--------------|---|--|
| Container<br>Name       | Multiplicity | Scope / Dependency  |  |
| LinTrcvDio-<br>Access   | 01           | Container gives LIN transceiver driver information about accessing ports<br>and port pins. In addition relation between LIN transceiver hardware pin<br>names and Dio port access information is given. If a LIN transceiver<br>hardware has no Dio interface, there is no instance of this container.  |  |
| LinTrcvSpi-<br>Sequence | 01           | Container gives LIN transceiver driver information about one SPI<br>sequence. One SPI sequence used by LIN transceiver driver is in<br>exclusive use for it. No other driver is allowed to access this sequence.<br>LIN transceiver driver may use one sequence to access n LIN<br>transceiver hardwares chips of the same type or n sequences are used<br>to access one single LIN transceiver hardware chip. If a LIN transceiver<br>hardware has no SPI interface, there is no instance of this container. |  |

### 10.2.6 LinTrcvDioAccess

| SWS Item            | [ECUC_LinTrcv_00094]  |
|---------------------|---|
| Container<br>Name   | LinTrcvDioAccess  |
| Parent<br>Container | LinTrcvAccess   |
| Description         | Container gives LIN transceiver driver information about accessing ports and port<br>pins. In addition relation between LIN transceiver hardware pin names and Dio port<br>access information is given. If a LIN transceiver hardware has no Dio interface, there |

| is no ins | stance of this container. |  |  |
|-----------|---------------------------|--|--|
|-----------|---------------------------|--|--|

**Configuration Parameters** 

| Included Containers                            |    |   |  |
|--|----|---|--|
| Container Name Multiplicity Scope / Dependency |    |   |  |
| LinTrcvDioChannel-<br>Access                   | 1* | Container gives DIO channel access by single Lin transceiver channel. |  |

#### 10.2.7 LinTrcvDioChannelAccess

| SWS Item                 | [ECUC_LinTrcv_00158]  |  |
|--------------------------|---|--|
| Container Name           | LinTrcvDioChannelAccess   |  |
| Parent Container         | LinTrcvDioAccess  |  |
| Description              | Container gives DIO channel access by single Lin transceiver channel. |  |
| Configuration Parameters |   |  |

| SWS Item                    | [ECUC_LinTrcv_00009]  |   |              |  |
|-----------------------------|---|---|--------------|--|
| Parameter<br>Name           | LinTrcvHardwareInterfaceName  |   |              |  |
| Parent<br>Container         | LinTrcvDioChannelAccess   |   |              |  |
| Description                 | LIN transceiver hardware interface name. It is typically the name of a pin. From a Dio point of view it is either a port, a single channel or a channel group.<br>Depending on this fact either LINTRCV_DIO_PORT_SYMBOLIC_NAME or LINTRCV_DIO_CHANNEL_SYMBOLIC_NAME or LINTRCV_DIO_CHANNEL_GROUP_SYMBOLIC_NAME shall reference a Dio configuration. The LIN transceiver driver implementation description shall list up this name for the appropriate LIN transceiver hardware. |   |              |  |
| Multiplicity                | 1   |   |              |  |

#### **No Included Containers**

### 10.2.8 LinTrcvSpiSequence

| SWS Item                 | [ECUC_LinTrcv_00155]  |  |
|--------------------------|---|--|
| Container<br>Name        | LinTrcvSpiSequence  |  |
| Parent<br>Container      | LinTrcvAccess   |  |
| Description              | Container gives LIN transceiver driver information about one SPI sequence. One SPI sequence used by LIN transceiver driver is in exclusive use for it. No other driver is allowed to access this sequence. LIN transceiver driver may use one sequence to access n LIN transceiver hardwares chips of the same type or n sequences are used to access one single LIN transceiver hardware chip. If a LIN transceiver hardware has no SPI interface, there is no instance of this container. |  |
| Configuration Parameters |   |  |

| SWS Item                  | [ECUC_LinTrcv_00156]                                 |   |              |  |
|---------------------------|--|---|--------------|--|
| Parameter Name            | LinTrcvSpiSequenceName                               |   |              |  |
| Parent Container          | LinTrcvSpiSequence                                   |   |              |  |
| Description               | Reference to a Spi sequence configuration container. |   |              |  |
| Multiplicity              | 1  |   |              |  |
| Туре                      | Symbolic name reference to SpiSequence               |   |              |  |
| Post-Build Variant Value  | false  |   |              |  |
| Value Configuration Class | Pre-compile time                                     | Х | All Variants |  |

|                    | Link time                               | - |  |
|--------------------|---|---|--|
|                    | Post-build time                         | - |  |
| Scope / Dependency | scope: local<br>dependency: SpiSequence |   |  |

**No Included Containers** 

## **10.3 Published Information**

For details refer to the chapter 10.3 "Published Information" in SWS\_BSWGeneral.
