1 Introduction and functional overview

This document specifies the functionality, APIs and the configuration of the AUTOSAR Basic Software module Chinese Vehicle-2-X Management (CnV2xM).
The Chinese Vehicle-2-X Management (CnV2xM) together with the Chinese Vehicle-2-X Message (CnV2xMsg), Chinese Vehicle-2-X Network (CnV2xNet), Chinese Vehicle-2-X Security (CnV2xSec) and AUTOSAR BSW module Ethernet Interface (EthIf) forms the Chinese V2X stack within the AUTOSAR architecture.
The bases for this document are the Chinese LTE-V2X based standards [1] [2]. It is assumed that the reader is familiar with these standards.

1.1 Architecture Overview

Positioning of the CnV2xM module within the AUTOSAR BSW and the Layered Software architecture is shown in below.

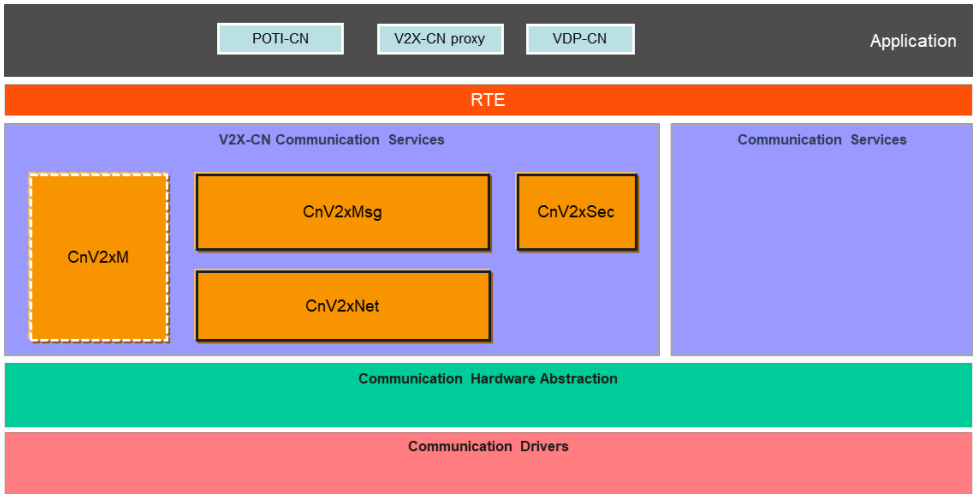

Figure 1.1: AUTOSAR BSW software architecture - CnV2xM scope

1.2 Functional Overview

The CnV2xM module support the operation of the Chinese V2X protocol stack in common V2X channel parameter acquisiton and initialization of cellular V2X driver.
In future,the CnV2xM module will implement some basic services of DME specified in [2], and will support Chinese V2X unicast services based on LTE-V2X on application level.

3.2 Related specification

AUTOSAR provides a General Specification on Basic Software modules [3], which is also valid for CnV2xM.

Thus, the specification SWS BSW General shall be considered as additional and required specification for CnV2xM.

4 Constraints and assumptions

4.1 Limitations

- The Chinese V2X modules follow the guidance regarding the Day-1 V2X allocations defined in [1] [2], which are by NTCAS and CCSA respectively.
- Wireless communication supports LTE-V2X PC5 only. Other cellular based wireless communication can be extended in future release of AUTOSAR standard.
- DME functions specified in [2] will be implemented to support LTE-V2X based unicast service in future.

4.2 Applicability to car domains

This specification is applicable to all car domains.

5 Dependencies to other modules

This section describes the relations of CnV2xM module to other modules within the AUTOSAR basic software architecture. It outlines the modules that are required or optional for the realization of CnV2xM module and services.

5.1 AUTOSAR Default Error Tracer (DET)

In development mode, CnV2xM module reports errors through the Det_ReportError function of DET Module [4].

5.2 AUTOSAR Ecu State Manager (EcuM)

The EcuM [5] initializes the CnV2xM module by calling CnV2xM_Init specified in 8.3.1 in this document.

5.3 AUTOSAR Ethernet Interface (EthIf)

The Ethernet Interface [6] is the lower layer module of CnV2xNet module.

5.4 AUTOSAR Chinese Vehicle-2-X Message (CnV2xMsg)

The CnV2xMsg can get channel parameters by calling CnV2xM_GetChanTxParams in this document.
