1 Introduction and functional overview

The I2C Driver provides services for reading from and writing to devices connected via I2C busses. It provides access to I2C communication to several Targets (e.g. EEPROM).

This specification describes the functionality, API and the configuration of the module I2C Driver.

The I2C Driver implements Controller mode and Target mode. The Driver offers a hardware independent API to the upper layer that can be used to configure the I2C and initiate synchronous and asynchronous data transfers. Hardware and software settings can be configured using an AUTOSAR standard configuration tool. The information required for an I2C data transfer will be configured in a data structure that will be sent as parameter to the API of the Driver. The Driver reports errors to the error manager as defined in AUTOSAR.

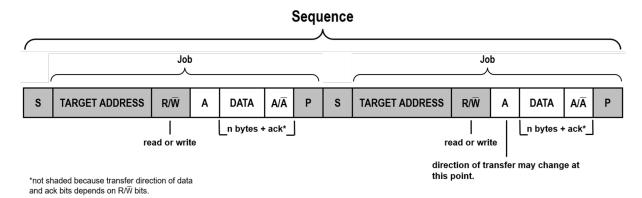

Figure 1.1: Terminology for Sequence and Job

To configure the I2C Driver these steps shall be followed:

- I2C Jobs shall be defined according to data usage provided by the user (EB).
- I2C Sequences consisting of multiple Jobs shall be defined in order to transmit data in a sorted way.

The driver supports multi master mode.

2 Acronyms and Abbreviations

The glossary below includes acronyms and abbreviations relevant to the I2C Driver module that are not included in the [1, AUTOSAR glossary].

Abbreviation / Acronym:	Description:	
Controller	A device controlling other devices (Targets). Further it initiates a transfer, generates clock signals and terminates a transfer. Formerly known as "Master".	
Rx	Reception (in the context of bus communication)	
SCL	Serial Clock	
SDA	Serial Data	
Target	A device being addressed by a Controller device. Formerly known as "Slave".	
TX	Transmission (in the context of bus communication)	
Sequence	A Sequence is a number of consecutive Jobs to transmit.	
Job	A Job is a software exchange medium for data that are defined with the same criteria: Config. Parameters, Number of Data elements with the same size and data pointers. Jobs can be shared between different Sequences.	
Request Queue	A request queue queues only the tranmission request without the data itself.	
active request	An active request is an ongoing transmission.	
pending request	An pending request is an queued transmission request.	
ЕВ	Externally buffered Jobs. Buffers containing data to transfer are outside the I2C Driver.	

Table 2.1: Acronyms and abbreviations used in the scope of this Document

3 Related documentation

3.1 Input documents

- [1] Glossary
 AUTOSAR_FO_TR_Glossary
- [2] General Specification of Basic Software Modules AUTOSAR_CP_SWS_BSWGeneral
- [3] Specification of MCU Driver AUTOSAR CP SWS MCUDriver

3.2 Related standards and norms

UM10204 - I2C-bus specification and user manual, NXP Semiconductors, 2021

3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [2, SWS BSW General], which is also valid for I2C Driver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for I2C Driver.

4 Constraints and assumptions

4.1 Limitations

No Limitations.

4.2 Applicability to car domains

No restrictions.

5 Dependencies to other modules

The I2C Driver module does not take care of setting the registers which configure the clock, prescaler(s) and PLL in its init function. This has to be done by the MCU module [3].

Note: I2C peripherals may depend on the system clock, prescaler(s) and PLL. Thus, any change of the system clock (e.g. PLL on / PLL off / clock dividers) may also affect the clock settings of the I2C hardware.

Table 6.1: Requirements Tracing

7 Functional specification

7.1 Background & Rationale

The I2C Driver is widely used in the automotive industry. Due to the fact that there was no standard for I2C in AUTOSAR, each company developed its own I2C Driver. In consequence the individuality of their interfaces results in incompatibility with drivers from other manufacturers. For instance, drivers for external hardware that use an I2C Driver among themselves may not cooperate with the I2C Drivers of other companies upon delivery. This principle contradicts the AUTOSAR philosophy, which stands for manufacturer-independent components and aims to reduce the constant redevelopment of similar software components. For this reason, an AUTOSAR standard for I2C is beneficial.

7.2 Common design requirements

[CP_SWS_I2C_00836] Arbitration Detection and Handling in Multimaster I2C Mode

Status: DRAFT

Upstream requirements: CP_RS_I2C_00004

[If I2CMultiMaster is set, the I2C driver shall implement arbitration detection and handling in compliance with the I2C specification for multimaster mode. During transmission, the master monitors the SDA line and detect if another master is transmitting a dominant bit (logic 0) while it attempts to transmit a recessive bit (logic 1). Upon losing arbitration, the master shall immediately cease transmission and release the bus.

[CP SWS I2C 00837] Clock Line Monitoring and Synchronization)

Status: DRAFT

Upstream requirements: CP_RS_I2C_00004

[If I2CMultiMaster is set, the I2C driver shall support clock synchronization by monitoring the SCL line during transmission and respecting clock stretching by other masters or slaves. If the SCL line is held low by another device, the master shall pause its transmission and wait until the line is released (goes high) before proceeding with the next clock cycle.]

[CP SWS I2C 00838] Bus Idle Check Prior to Transmission

Status: DRAFT

Upstream requirements: CP_RS_I2C_00004

[If I2CMultiMaster is set, the I2C driver shall verify that the I2C bus is idle before initiating any transmission. The bus is considered idle when both the SDA and SCL lines are in a high state. If the bus is busy (either line is low), the master shall wait until the bus becomes idle before proceeding.

[CP_SWS_I2C_00839] Transmission Retry on Communication Failure

Status: DRAFT

Upstream requirements: CP_RS_I2C_00012

[The I2C driver shall implement a retry mechanism for failed transmissions. Failures include arbitration loss, NACK responses, or timeouts. Upon detecting a failure, the driver shall abort the current transaction, wait for the bus to become idle, and retry the transmission up to a maximum number of attempts of I2CMaximumRetry.

[CP SWS I2C 00840] Bus Recovery from Stuck Condition

Status: DRAFT

Upstream requirements: CP_RS_I2C_00012

[The I2C driver shall implement a bus recovery procedure when the bus is detected to be stuck (e.g., SDA held low). The recovery shall include manually toggling the SCL line up to 9 times to release any stuck slave, followed by issuing a STOP condition and reinitializing the I2C peripheral.

7.3 Error Classification

Chapter [2, General Specification of Basic Software Modules] 7.2 "Error Handling" [2] describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.

7.3.1 Development Errors

[CP_SWS_I2C_00700] Definition of development errors in module I2C

Status: DRAFT

Γ

Type of error	Related error code	Error value
API service called with wrong parameter	I2C_E_PARAM_JOB	0x00
API service called with wrong parameter	I2C_E_PARAM_SEQUENCE	0x01
API service called with an unexpected value for the pointer	I2C_E_PARAM_POINTER	0x02
API service used without module initialization (see [SWS_BSW_00243] for more details)	I2C_E_UNINIT	0x03
API is called under wrong condition	I2C_E_WRONG_CONDITION	0x04
API is called with unexpected HW unit ID	I2C_E_PARAM_UNIT	0x05

Ī

7.3.2 Runtime Errors

[CP_SWS_I2C_00701] Definition of runtime errors in module I2C

Status: DRAFT

Γ

Type of error	Related error code	Error value
Error is reported if NACK was received	I2C_E_NACK_RECEIVED	0x00
Error is reported if the master loses arbitration. This usually happens if the SDA is stuck low or high or another master has won the arbitration procedure.	I2C_E_ARBITRATION_FAILURE	0x01
Error is reported in case of FIFO overflow	I2C_E_FIFO_HANDLING	0x02

[CP_SWS_I2C_00702] Error I2C_E_FIFO_HANDLING

Status: DRAFT

Upstream requirements: CP_RS_I2C_00012

[In case the I2C hardware supports a FIFO, any FIFO related error shall be reported as Runtime Error as I2C_E_FIFO_HANDLING.|

[CP_SWS_I2C_00703] Error I2C_E_NACK_RECEIVED

Status: DRAFT

Upstream requirements: CP_RS_I2C_00012

[A NACK error shall be reported as Runtime Error I2C_E_NACK_RECEIVED.]

[CP SWS I2C 00704] I2C E ARBITRATION FAILURE

Status: DRAFT

Upstream requirements: CP_RS_I2C_00012

[A loss in arbitration or the SCL line is stuck low or high it shall be reported as Runtime Error I2C_E_ARBITRATION_FAILURE.]

Note: This usually happens if the SDA is stuck low or another Controller has won the arbitration procedure.

7.3.3 Production Errors

There are no production errors.

7.3.4 Extended Production Errors

There are no extended production errors.

8 API specification

8.1 Imported types

In this chapter all types included from the following files are listed.

[CP_SWS_I2C_00833] Definition of imported datatypes of module I2C

Status: DRAFT

Γ

Module	Header File	Imported Type
Std	Std_Types.h	Std_ReturnType
	Std_Types.h	Std_VersionInfoType

8.2.8 I2C_SequenceType

[CP_SWS_I2C_00810] Definition of datatype I2C_SequenceType

Status: DRAFT

Γ

Name	I2C_SequenceType (draft)
Kind	Туре
Derived from	uint8
Description	This is the type for a Sequence identifier. Tags: atp.Status=draft
Available via	I2c.h

8.2.9 I2C_SequenceResultType

[CP_SWS_I2C_00807] Definition of datatype I2C_SequenceResultType

Status: DRAFT

Γ

Name	I2C_SequenceResultType (draft)		
Kind	Enumeration		
Range	I2C_SEQ_OK	0x00	The last transmission of the Sequence has been finished successfully.
	I2C_SEQ_PENDING	0x01	The I2C Driver is performing an I2C Sequence. The meaning of this status is equal to I2C_BUSY.
	I2C_SEQ_QUEUED	0x02	An I2C Sequence is queued and waiting to be transmitted.
	I2C_SEQ_NACK	0x03	An I2C Sequence encountered a NACK signal.
	I2C_SEQ_FAILED	0x04	The last transmission of the Sequence has failed.
Description	This type defines a range of specific Sequences status for the I2C Driver. Tags: atp.Status=draft		
Available via	I2c.h		

8.3 Function definitions

8.3.1 I2C_Init

[CP_SWS_I2C_00820] Definition of API function I2C_Init

Status: DRAFT

Upstream requirements: SRS BSW 00358, SRS BSW 00414

Service Name	I2C_Init (draft)	
Syntax	<pre>void I2C_Init (const I2C_ConfigType* ConfigPtr)</pre>	
Service ID [hex]	0x00	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	ConfigPtr Pointer to I2C Driver configuration set.	
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	This service initializes the I2C Driver. Tags: atp.Status=draft	
Available via	I2c.h

Service Name	I2C_SetupEB (draft)	I2C_SetupEB (draft)	
Syntax	Std_ReturnType I2C_SetupEB (
Service ID [hex]	0x02		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant	Non Reentrant	
Parameters (in)	Jobld	Job to be used in the transmission.	
	NodeAddress	Any other value then zero will override the statically configured node address.	
TxDataBufferPtr Pointer to the TX transmiss		Pointer to the TX transmission data location.	
	RxDataBufferPtr	Pointer to the RX transmission data location.	
	Length Length (number of data elements) of the data to be transmitted from TxDataBufferPtr and/or received from RxDataBufferPtr.		
Parameters (inout)	None	None	
Parameters (out)	None		
Return value	Std_ReturnType	E_OK: Success. E_NOT_OK: Request rejected, due to implementation defined errors.	
Description	API shall setup the buff Tags: atp.Status=draft	API shall setup the buffers and the length of data for the EB I2C Driver Job specified. Tags: atp.Status=draft	
Available via	I2c.h		

[CP SWS I2C 00107] Return values

Status: DRAFT

Upstream requirements: CP_RS_I2C_00002

[Return values of the function I2C_SetupEB are E_OK: Setup command has been accepted and E_NOT_OK: Setup command has not been accepted.]

[CP_SWS_I2C_00101] Development Error Detection

Status: DRAFT

Upstream requirements: CP_RS_I2C_00002

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C SetupEB shall raise the development error I2C E PARAM POINTER if:

- RxDataBufferPtr and TxDataBufferPtr are both NULL pointer
- RxDataBufferPtr and TxDataBufferPtr are both not NULL pointer

1

[CP_SWS_I2C_00102] Buffer Pointer Setup EB - Controller mode

Status: DRAFT

Upstream requirements: CP_RS_I2C_00002

[When the function I2C_SetupEB is called with the parameter RxDataBufferPtr being a NULL pointer, the according transmission(s) (triggered by I2C_AsyncTransmit or I2C_SyncTransmit) shall be a write operation on the I2C bus, otherwise parameter TxDataBufferPtr being a NULL pointer, the according transmission shall be a read operation.

[CP_SWS_I2C_00105] Buffer Pointer Setup EB - Target mode

Status: DRAFT

Upstream requirements: CP_RS_I2C_00002

[When the function I2C_SetupEB is called with the parameter TxDataBufferPtr being a NULL pointer, the according listening(s) (triggered by I2C_AsyncTransmit or I2C_SyncTransmit) shall be a read operation on the I2C bus.

[CP_SWS_I2C_00106] Buffer Pointer Setup EB - Target mode

Status: DRAFT

Upstream requirements: CP_RS_I2C_00002

[When the function I2C_SetupEB is called with the parameter RxDataBufferPtr being a NULL pointer, the according listening(s) (triggered by I2C_AsyncTransmit or I2C_SyncTransmit) shall be a write operation on the I2C bus.]

[CP SWS I2C 00103] Node Address override Setup EB

Status: DRAFT

Upstream requirements: CP RS I2C 00002

[When the function I2C_SetupEB is called with the parameter NodeAddress set to

- other than zero
 the node address given by the parameter NodeAddress
- zero the configured node address I2CDeviceAddress

shall be used in the according transmission(s) (triggered by I2C_AsyncTransmit or I2C_SyncTransmit).

[CP_SWS_I2C_00104] Development Error Detection

Status: DRAFT

Upstream requirements: CP RS I2C 00002

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_SetupEB shall raise the development error I2C_E_PARAM_JOB if JobId is invalid (i.e. is not configured in I2CJobId).]

8.3.4 I2C_AsyncTransmit

[CP_SWS_I2C_00823] Definition of API function I2C_AsyncTransmit

Status: DRAFT

Upstream requirements: CP_RS_I2C_00017, CP_RS_I2C_00006, CP_RS_I2C_00007

Γ

Service Name	I2C_AsyncTransmit (draft)	
Syntax	<pre>Std_ReturnType I2C_AsyncTransmit (I2C_SequenceType SequenceId)</pre>	
Service ID [hex]	0x03	
Sync/Async	Asynchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Sequenceld	Sequence used for data exchange.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	
Description	The service conducts an asynchronous data transmission according to the parameters provided to the I2C_SetupEB() service. The callback I2C_SeqEndNotification() is called, when the asynchronous operation has finished. Tags: atp.Status=draft	
Available via	I2c.h	

[CP_SWS_I2C_82303] No transmission is ongoing

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007, CP_RS_I2C_00017

[When the function I2C_AsyncTransmit is called and no other Sequence on the same I2CChannel is in state I2C_SEQ_PENDING, the I2C Driver shall take over the given parameter set by I2C_SetupEB, initiate a transmission of Length bytes, set the sequence result to I2C_SEQ_PENDING and return E_OK.]

[CP SWS I2C 82304] Another transmission is ongoing

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007, CP_RS_I2C_00017, CP_RS_I2C_00006

[When the function I2C_AsyncTransmit is called and any other Sequence on the same I2CChannel is in state I2C_SEQ_PENDING, the I2C Driver shall queue in FIFO the request, set the state I2C_SEQ_QUEUED, and return $E_OK.$]

[CP_SWS_I2C_82306] Another transmission with a shared Job is ongoing

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007, CP_RS_I2C_00017, CP_RS_I2C_00006

[When the function I2C_AsyncTransmit is called and the requested Sequence shares on the same I2CChannel a Job (i.e. reference to the same I2CJob) in another Sequence which is in state I2C_SEQ_PENDING, the I2C Driver shall reject the request and return E_NOT_OK.]

[CP_SWS_I2C_82311] High priority transmission

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007, CP_RS_I2C_00017, CP_RS_I2C_00006

[When the function I2C_AsyncTransmit is called and another Sequence on the same I2CChannel is in state I2C_SEQ_PENDING and has a Job with a higher I2CJobPriority, the I2C Driver shall either:

- if I2CSeqInterruptible set to true, the I2C Driver shall interrupt the current Sequence with the higher prior Sequence. After this Sequence is transmitted the interrupted Sequence shall be finished.
- if I2CSeqInterruptible set to false, the I2C Driver shall transmit the higherprior Sequence immediately after the current Sequence has finished.

Finally it shall return E_OK.

Note: A Job is atomic and cannot be interrupted.

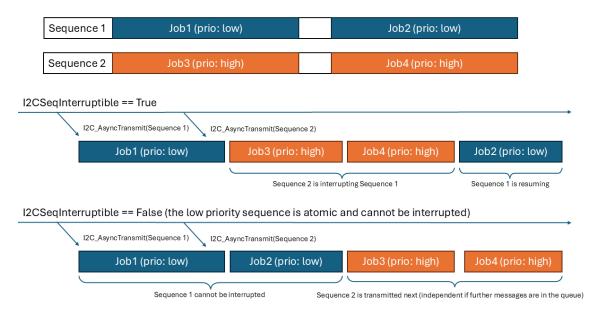

Figure 8.1: Interruptable sequences

[CP SWS I2C 82305] The same transmission is ongoing

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007

[When the function I2C_AsyncTransmit is called and the requested Sequence is already in state I2C_SEQ_PENDING, the I2C Driver shall not take this new request into account. In that case, the function shall return with value E_NOT_OK .]

[CP_SWS_I2C_82307] Multiple Jobs

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007, SRS_SPAL_00157

[If the I2CSequence consisting of multiple Jobs (I2CAssignedJob), the function I2C_AsyncTransmit shall transmit from the first Job up to the last Job in the Sequence. Further it shall be assured that the first message transmission is using the START condition (S) and all subsequent Jobs in the sequence the repeated START condition (Sr). After the last job is executed or if any error occurred, the I2C driver shall set the state to

- · I2C SEQ FAILED, if any failure occurred
- I2C_SEQ_NACK, if a NACK message was received
- I2C SEQ OK, if everything was successfully executed.

and afterwards invoke the sequence notification callback function <code>I2C_SeqEndNotification</code>.

[CP_SWS_I2C_82308] Continuation with Queued Elements

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007, SRS_SPAL_00157, CP_RS_I2C_00017, CP_RS_-

I2C 00006

[After the last job is executed and FIFO queue is not empty (i.e. any other Sequence on the same I2CChannel is in state I2C_SEQ_QUEUED), the I2C driver shall transmit the next FIFO element similar to [CP_SWS_I2C_82303] and remove this element from the queue.

[CP SWS I2C 82309] Development Error Detection

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_AsyncTransmit shall raise the development error I2C_E_PARAM_SEQUENCE if the function I2C_SetupEB is a not called once in advance for all Jobs in the Sequence.]

Note: I2C_SetupEB does not need to be called every time before a call to I2C_-AsyncTransmit, e.g. if the EB parameter have not changed a single call of I2C_SetupEB is enough.

[CP SWS I2C 00310] Development Error Detection

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_AsyncTransmit shall raise the development error I2C_E_PARAM_SEQUENCE if SequenceId is invalid (i.e. is not configured in I2CSequenceId).]

8.3.5 I2C SyncTransmit

[CP_SWS_I2C_00824] Definition of API function I2C_SyncTransmit

Status: DRAFT

Upstream requirements: CP_RS_I2C_00017, CP_RS_I2C_00008

Γ

Service Name	I2C_SyncTransmit (draft)	
Syntax	Std_ReturnType I2C_SyncTransmit (
Service ID [hex]	0x04	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Sequenceld	Sequence used for data exchange.
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_ReturnType	E_OK: Success. E_NOT_OK: Request rejected.
Description	This service sends or receives data using a blocking mechanism according to the parameters provided to the I2C_SetupEB() service. Tags: atp.Status=draft	
Available via	I2c.h	

[CP_SWS_I2C_82403] No transmission is ongoing

Status: DRAFT

Upstream requirements: CP_RS_I2C_00008, CP_RS_I2C_00017

[When the function I2C_SyncTransmit is called and no other Sequence on the same I2CChannel is in state I2C_SEQ_PENDING, the I2C Driver shall take over the given parameter set by I2C_SetupEB, initiate a transmission of Length bytes, set the sequence result to I2C SEQ PENDING and return E_OK.|

[CP_SWS_I2C_82404] Another transmission is ongoing

Status: DRAFT

Upstream requirements: CP_RS_I2C_00008, CP_RS_I2C_00017

[When the function I2C_SyncTransmit is called and any other asynchronous Sequence on the same I2CChannel is in state I2C_SEQ_PENDING, the I2C Driver shall reject the request and return E_NOT_OK.|

[CP_SWS_I2C_82407] Multiple Jobs

Status: DRAFT

Upstream requirements: CP_RS_I2C_00008, SRS_SPAL_00157

[If the I2CSequence consisting of multiple Jobs (I2CAssignedJob), the function I2C_SyncTransmit shall transmit from the first Job up to the last Job in the Sequence. Further it shall be assured that the first message transmission is using the START condition (S) and all subsequent Jobs in the sequence the repeated START condition (Sr). After the last job is executed, I2C driver shall return E_OK.

[CP_SWS_I2C_82409] Development Error Detection

Status: DRAFT

Upstream requirements: CP_RS_I2C_00008

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_SyncTransmit shall raise the development error I2C_E_PARAM_SEQUENCE if the function I2C_SetupEB is a not called once in advance for all Jobs in the Sequence.|

Note: I2C_SetupEB does not need to be called every time before a call to I2C_-SyncTransmit, e.g. if the EB parameter have not changed a single call of I2C_SetupEB is enough.

[CP_SWS_I2C_00410] Development Error Detection

Status: DRAFT

Upstream requirements: CP_RS_I2C_00008

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_SyncTransmit shall raise the development error I2C_E_PARAM_SEQUENCE if SequenceId is invalid (i.e. is not configured in I2CSequenceId).

8.3.6 I2C_GetVersionInfo

[CP SWS I2C 00827] Definition of API function I2C GetVersionInfo

Status: DRAFT

Γ

Service Name	I2C_GetVersionInfo (draft)	
Syntax	<pre>void I2C_GetVersionInfo (Std_VersionInfoType* VersionInfo)</pre>	
Service ID [hex]	0x07	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	VersionInfo Pointer to where to store the version information of this module.	
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	This service returns the version information of this module. Tags: atp.Status=draft	
Available via	I2c.h	

[CP_SWS_I2C_82601] Development Error Detection

Status: DRAFT

Upstream requirements: SRS_BSW_00323

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_GetVersionInfo shall raise the development error I2C_E_PARAM_POINTER if the parameter VersionInfo is a NULL pointer.]

8.3.7 I2C_GetSequenceResult

[CP_SWS_I2C_00828] Definition of API function I2C_GetSequenceResult

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007, CP_RS_I2C_00012

Γ

Service Name	I2C_GetSequenceResult (draft)		
Syntax	<pre>I2C_SequenceResultType I2C_GetSequenceResult (I2C_SequenceType SequenceId)</pre>		
Service ID [hex]	0x09		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant		
Parameters (in)	Sequenceld Sequence to query.		
Parameters (inout)	None		
Parameters (out)	None		
Return value	I2C_SequenceResultType	Return the current status	
Description	This service returns the current status of the given Sequenceld. Tags: atp.Status=draft		
Available via	I2c.h		

I

[CP SWS I2C 80701] Sequence Result

Status: DRAFT

Upstream requirements: CP RS I2C 00006, CP RS I2C 00007

[I2C_GetSequenceResult function shall return

- I2C_SEQ_OK when the current transmission of the Sequence has been finished successfully.
- I2C_SEQ_PENDING when the I2C Driver is performing an I2C Sequence.
- I2C_SEQ_FAILED when the current transmission of the Sequence has failed.
- I2C_SEQ_NACK a NACK signal was encountered.
- I2C_SEQ_QUEUED when an I2C Sequence is queued and waiting to be transmitted.

١

[CP_SWS_I2C_80702] Development Error Detection

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_GetSequenceResult shall raise the development error I2C_E_PARAM_SEQUENCE if SequenceId is invalid (i.e. is not configured in I2CSequenceId).]

8.3.8 I2C GetChannelStatus

[CP_SWS_I2C_91001] Definition of API function I2C_GetChannelStatus [

Service Name	I2C_GetChannelStatus		
Syntax	<pre>I2C_ChannelStatusType I2C_GetChannelStatus (I2C_ChannelType Channel)</pre>		
Service ID [hex]	0x0B		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Reentrant		
Parameters (in)	Channel	I2C hardware microcontroller peripheral (unit) ID.	
Parameters (inout)	None		
Parameters (out)	None		
Return value	I2C_ChannelStatusType	I2C_IDLE: 0x01 I2C_BUSY: 0x02	
Description	This service returns the status of the specified I2C Hardware peripheral.		
Available via	12c.h		

١

[CP SWS I2C 00835] I2C GetChannelStatus

Status: DRAFT

Upstream requirements: CP_RS_I2C_00015, CP_RS_I2C_00017

[I2C_GetChannelStatus shall return the status of specified I2C Hardware unit:

- I2C_BUSY, if given HW unit is busy in transmitting the sequences
- I2C_IDLE, if given HW unit is not transmitting any sequences

[CP SWS I2C 00841] Development Error Detection

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007

[If development error detection is enabled (I2CDevErrorDetect == True), the function I2C_GetChannelStatus shall raise the development error I2C_E_PARAM_SEQUENCE if Channel is invalid (i.e. is not configured in I2CChannel).]

8.4 Callback notifications

This chapter lists all functions provided by the I2C module to lower layer modules. The I2C Driver module belongs to the lowest layer of AUTOSAR Software Architecture hence this module specification has not identified any callback functions.

8.5 Scheduled functions

8.5.1 I2C MainFunction

[CP_SWS_I2C_00834] Definition of scheduled function I2C_MainFunction

Status: DRAFT

Γ

Service Name	I2C_MainFunction (draft)
Syntax	<pre>void I2C_MainFunction (void)</pre>
Service ID [hex]	0x10
Description	Makes a target channel available for processing requests (addressing). When called, the target channel becomes available for starting incoming or outgoing transfers. Tags: atp.Status=draft
Available via	I2c.h

[CP SWS I2C 80902] Polling Mode

Status: DRAFT

[If I2CPollingMode is set to I2C_CHANNEL_MODE_POLLING, the I2C driver shall use the I2C_MainFunction to poll the hardware and not use interrupts.]

8.6 Expected interfaces

In this chapter all interfaces required from other modules are listed.

8.6.1 Mandatory interfaces

The I2C Driver module requires some interfaces to fulfill its core functionality.

[CP_SWS_I2C_00831] Definition of mandatory interfaces required by module I2 C

Status: DRAFT

Γ

API Function	Header File	Description
There are no mandatory interfaces.		

8.6.2 Optional interfaces

This section defines all interfaces, which are required to fulfill an optional functionality of the I2C Driver module.

[CP_SWS_I2C_00830] Definition of optional interfaces requested by module I2C

Status: DRAFT

Γ

API Function	Header File	Description
Det_ReportRuntimeError	Det.h	Service to report runtime errors. If a callout has been configured then this callout shall be called.

١

8.6.3 Configurable interfaces

In this section, all interfaces are listed where the target function could be configured. The target function is usually a callback function. The names of this kind of interfaces are not fixed because they are configurable.

8.6.3.1 I2C_SeqEndNotification

[CP_SWS_I2C_00832] Definition of configurable interface (*I2C_SeqEndNotification)

Status: DRAFT

Upstream requirements: CP_RS_I2C_00007

Γ

Service Name	(*I2C_SeqEndNotification) (draft)		
Syntax	<pre>void (*I2C_SeqEndNotification) (I2C_SequenceType SequenceId, I2C_SequenceResultType Result)</pre>		
Sync/Async	Synchronous		
Reentrancy	Reentrant		
Parameters (in)	Sequenceld	Sequence which is finished.	
	Result	Status of currently executed sequence.	
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Callback routine provided by the user for each Sequence to notify the caller that a Sequence has been finished. Tags: atp.Status=draft		
Available via	I2c_Externals.h	I2c_Externals.h	

Note: This routine might be called on interrupt level, depending on the calling function.

9 Sequence diagrams

9.1 SetupEB/ AsyncTransmit

The following sequence diagram shows an example of the process of I2C_Setu-pEB/I2C_AsyncTransmit calls for one Sequence transmission composed of 3 Jobs. Write or Read accesses are "User Dependant". In the beginning the module is initialized and at the end again de-initialized.

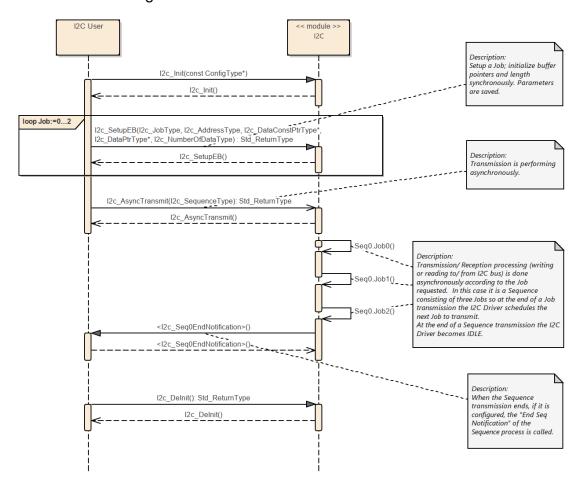

Figure 9.1: SetupEB/ AsyncTransmit

9.2 SetupEB/ SyncTransmit

The following sequence diagram shows an example of the process of I2C_SetupEB/I2C_SyncTransmit calls for two Sequence transmissions composed of 2 Jobs each. Write or Read accesses are "User Dependant". In the beginning the module is initialized and at the end again de-initialized.

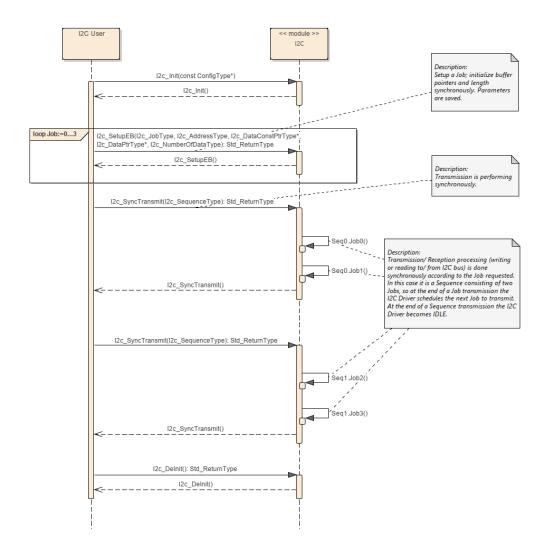

Figure 9.2: SetupEB/ SyncTransmit

10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module I2C driver.

Chapter 10.3 specifies published information of the module I2C driver.

10.1 How to read this chapter

For details refer to [2] Chapter 10.1 "Introduction to configuration specification".

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapter 7 and Chapter 8. Further hardware/ implementation specific parameters can be added if necessary.

10.2.1 I2C

[ECUC_I2C_00001] Definition of EcucModuleDef I2C

Status: DRAFT

ſ

Module Name	I2C
