

Document Title	Modeling Guidelines of Basic Software EA UML Model
<b>Document Owner</b>	AUTOSAR
<b>Document Responsibility</b>	AUTOSAR
<b>Document Identification No</b>	117
<b>Document Classification</b>	Auxiliary

<b>Document Version</b>	1.3.0
<b>Document Status</b>	Final
Part of Release	4.0
Revision	1

Document Change History			
Date	Version	Changed by	Change Description
03.12.2009	1.3.0	AUTOSAR	Modeling of header files has been revised
		Administration	Description of parameter modeling has
			been reworked
			Legal disclaimer revised
23.06.2008	1.2.1	AUTOSAR	Legal disclaimer revised
		Administration	
12.11.2007	1.2.0	AUTOSAR	Added description for range stereotype
		Administration	Change Requirements for function
			parameter and structure attributes
			Document meta information extended
			Small layout adaptations made
05.12.2006	1.1.0	AUTOSAR	Usage of packages clarified
		Administration	Sequence diagram modeling clarified
			Legal disclaimer revised
27.06.2006	1.0.0	AUTOSAR	Initial release
		Administration	

#### **Disclaimer**

This specification and the material contained in it, as released by AUTOSAR is for the purpose of information only. AUTOSAR and the companies that have contributed to it shall not be liable for any use of the specification.

The material contained in this specification is protected by copyright and other types of Intellectual Property Rights. The commercial exploitation of the material contained in this specification requires a license to such Intellectual Property Rights.

This specification may be utilized or reproduced without any modification, in any form or by any means, for informational purposes only.

For any other purpose, no part of the specification may be utilized or reproduced, in any form or by any means, without permission in writing from the publisher.

The AUTOSAR specifications have been developed for automotive applications only. They have neither been developed, nor tested for non-automotive applications.

The word AUTOSAR and the AUTOSAR logo are registered trademarks.

#### Advice for users:

AUTOSAR Specification Documents may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the Specification Documents for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such Specification Documents, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

# 1 Scope of this Document

This Modeling Guideline contains guidelines for the usage of the Enterprise Architect UML Modeling Tool (EA) that is used for the detailed architecture design of the AUTOSAR Basic Software.

Each guideline has its unique identifier starting with the prefix "BSW\_UMLGuide" (BSW = Basic Software). For any review annotations, remarks or questions please refer to this unique ID rather than chapter or page numbers!

- [2] General Requirements on Basic Software Modules AUTOSAR\_SRS\_BSWGeneral.pdf
- [3] Layered Software Architecture AUTOSAR\_EXP\_LayeredSoftwareArchitecture.pdf

### 2.2 Related standards and norms

[4] UML 2.0, Unified Modeling Language: Superstructure, Version 2.0, OMG document formal/05-07-04."

# 3 Terms and abbreviations

Terms	Definitions
BSW Module Component	Each BSW module is modeled using one "UML Component" and
	several "Interface Classes" within the BSW UML model. The "UML Component" represents the internal behavior or C-file(s) of
	the BSW module. It is called "BSW Module Component"
UML Component	Model element defined by [4].
Interface class	UML 2.0 class with stereotype "interface".
BSW Module Interface	Each BSW module is modeled using one "UML Component" and
	several "Interface Classes" within the BSW UML model. The
	"Interface classes" represent the header files of a specific BSW
	module. They are called "BSW Module Interfaces"
Tree view	The "project view" window within the Enterprise Architect is
	called "Tree view".

# 4 Requirements on the modeling of the Basic Software

# 4.1 General

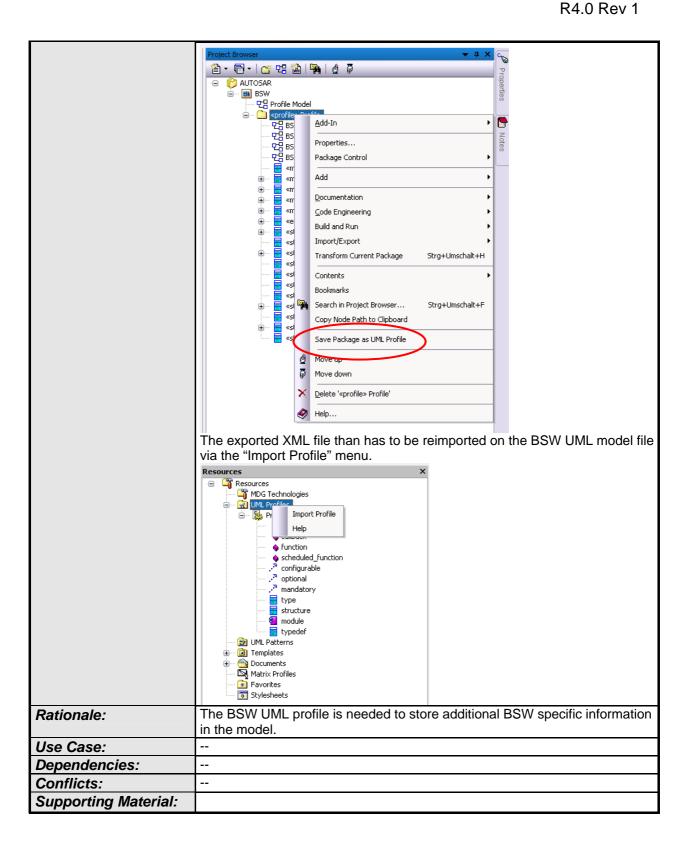

# 4.1.1 [BSW\_UMLGuide\_00017] UML 2.0

Initiator:	WP Architecture
Date:	14.10.2004
Short Description:	UML 2.0 shall be used for modeling the BSW UML model.
Type:	Changed
Importance:	high
Description:	The UML specification 2.0 shall be used for modeling the AUTOSAR Basic Software with the tool Enterprise Architect (EA).
Rationale:	Not defining new modeling techniques when there are techniques already available and standardized.
Use Case:	Modeling the Basic Software of AUTOSAR.
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.1.2 [BSW\_UMLGuide\_00065] Application of the BSW UML Profile

Initiator:	Technical Office
Date:	27.04.2007
Short Description:	BSW UML profile
Type:	Application of the BSW UML Profile
Importance:	high
Description:	The latest version of the BSW UML profile has to be applied to the BSW UML model. When a new version of the BSW UML profile has been released, it has to be reapplied to the BSW UML model. To apply the profile, it has to be exported to XML via the "Save Package as UML Profile" menu entry.

## 4.1.3 [BSW\_UMLGuide\_00001] Allowed elements

Initiator:	WP Architecture
Date:	27.04.2007

Short Description:	Allowed elements	
Type:		
Importance:	high	
Description:	The following elements of UML are allowed to use within the Basic software overall UML model:  - package - class ('typedef') for classes describing C typedefs - class ('type') for classes describing C types - class ('structure') for classes describing C structs - enumeration for C enums - operation ('function') for functions - operation ('scheduled_function') for scheduled functions - operation ('callback') for callbacks - component ('module') for components describing the interfaces of a BSW module - interface - lifeline - fragment - note - node (with stereotype peripheral or cluster) - state (including initial, final, fork/join, choice, exit) - action - decision - activity - boundary Other elements shall not be used.	
Rationale:	Restriction of different modeling techniques.	
Use Case:	Modeling of the complete communication stack	
Dependencies:	[BSW_UMLGuide_00053] Allowed diagrams	
Conflicts:		
Supporting Material:		

# 4.1.4 [BSW\_UMLGuide\_00002] Allowed relationships

Initiator:	WP Architecture	
Date:	07.10.2004	
Short Description:	Allowed relationships	
Type:	Changed	
Importance:	high	
Description:	The following relationships are allowed to use within the Basic software overall UML model:  - realize - nesting - dependency ('mandatory'): for mandatory interfaces of a component - dependency ('optional'): for optional interfaces of a component - dependency ('configurable"): for configurable interfaces of a component - message - Self-message - Call - transition - activity edge Other relationships shall not be used.	
Rationale:	Restriction of different modeling techniques.	

Use Case:	Modeling of the complete communication stack
Dependencies:	[BSW_UMLGuide_00053] Allowed diagrams
Conflicts:	
Supporting Material:	

# 4.1.5 [BSW\_UMLGuide\_00053] Allowed set of diagrams

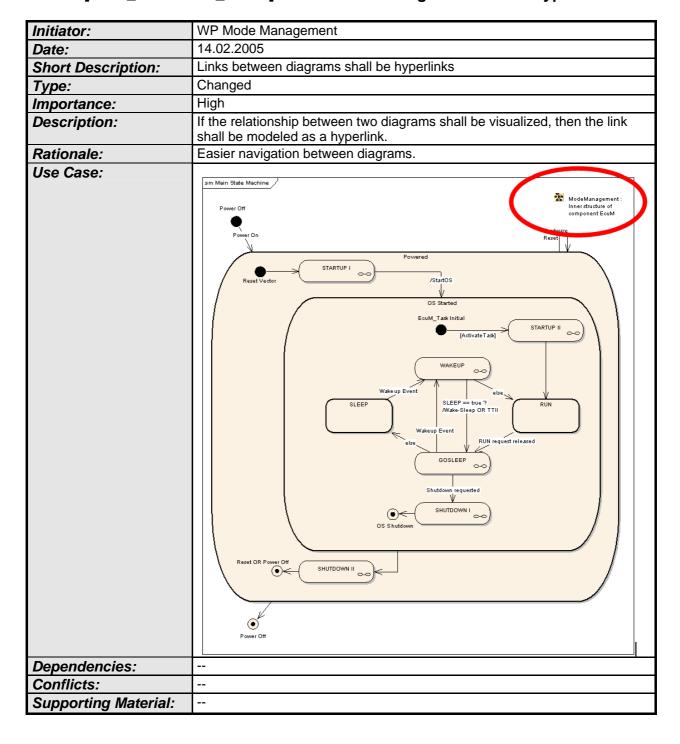

Initiator:	WP Architecture
Date:	07.10.2004
Short Description:	Allowed set of diagrams
Type:	Changed
Importance:	high
Description:	Only a reduced set of diagrams shall be used. Allowed structural diagrams are: - Package diagrams and - Component diagrams.  Allowed sequence diagrams are: - Sequence diagrams - Activity diagrams and - State machine diagrams.
Rationale:	Restriction of different modeling techniques.
Use Case:	Modeling of the complete communication stack
Dependencies:	[BSW_UMLGuide_00001] Allowed elements [BSW_UMLGuide_00002] Allowed relationships
Conflicts:	
Supporting Material:	

# 4.1.6 [BSW\_UMLGuide\_00060] Documentation of elements

Initiator:	Technical office
Date:	27.04.2007
Short Description:	Elements used for generating SWS tables must be documented
Type:	
Importance:	High
Description:	Documentation ('Notes') must be provided for the following element types:  class ('type', 'typedef', 'structure') attributes operation ('function', 'scheduled_function', 'callback') enumeration parameter
Rationale:	BSW documentation generator needs description for these elements to be able to generate the tables.
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

### 4.1.7 [BSW\_UMLGuide\_00047] Links between diagrams shall be hyperlinks

# 4.2 Structural Design

## 4.2.1 [BSW\_UMLGuide\_00054] Use of Packages

Initiator:	Technical Office
Date:	31.07.2006
Short Description:	Use of Packages

Type:	New
Importance:	High
Description:	Packages may be used in three ways: (1) To group (only) sub-packages, (2) to represent one BSW module, grouping the BSW module component and its interfaces or (3) placed below a package of the second type to group additional elements detailing a BSW module. Packages of the first or second type shall only be added by the technical office.
Rationale:	Clear structure of the BSW UML model.
Use Case:	Modeling of the complete software architecture
Dependencies:	[BSW_UMLGuide_00003] Diagrams usage [BSW_UMLGuide_00009] Version numbers of software modules [BSW_UMLGuide_00035] Sub elements of BSW modules
Conflicts:	
Supporting Material:	

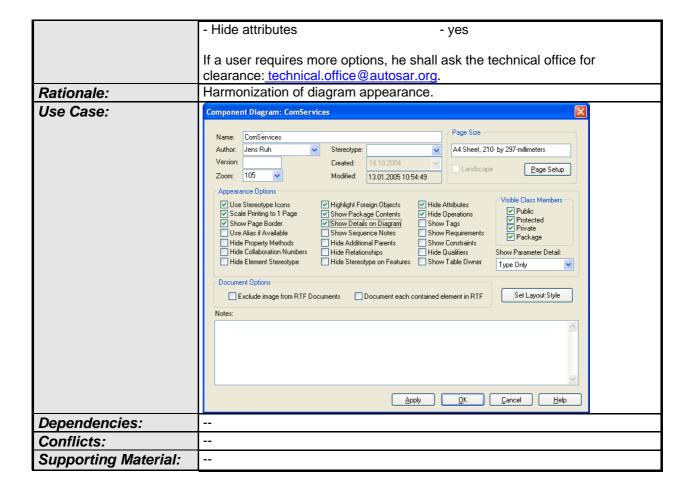

# 4.2.2 [BSW\_UMLGuide\_00003] Diagrams usage

Initiator:	WP Architecture
Date:	07.10.2004
Short Description:	Diagram usage
Type:	Changed .
Importance:	high
Description:	Each package containing only sub-packages shall at least have one structural "Component" diagram which shows the contents and, if possible, the relationships of the packages which it contains. Each package representing a BSW module shall at least have one structural "Component" diagram which shows at least the "realize", "mandatory", "optional" and "configurable" relationships of the BSW module component which it contains. The name of this diagram shall be equal to the BSW module component name.  This diagram shall be placed below the appropriate diagram within the tree view.
Rationale:	Have for each structural element a diagram showing the elements containing it.
	16

# 4.2.3 [BSW\_UMLGuide\_00038] Component diagram appearance options

Initiator:	WP Architecture	
Date:	08.02.2005	
Short Description:	Component diagram appearance	options
Type:	New	
Importance:	high	
Description:	In general only the following appershall be set:  - Use stereotype icons  - Scale printing to 1 page  - Show page border  - Highlight foreign objects  - Show package contents  - Show details on diagram  - Hide operations	earance options of component diagrams  - yes  - optional  - yes  - yes  - optional  - yes  - yes  - yes  - yes

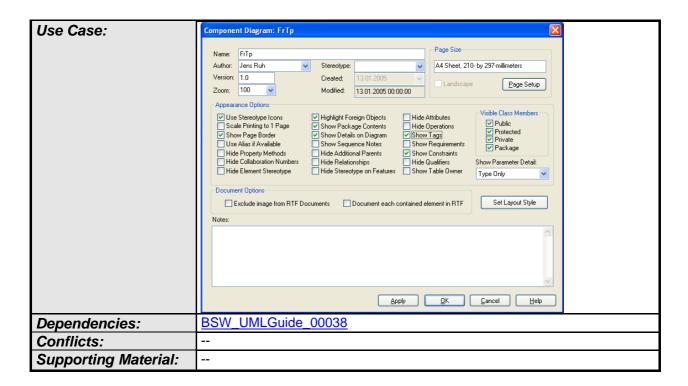

# 4.2.4 [BSW\_UMLGuide\_00039] Component diagram appearance of BSW module diagrams

Initiator:	WP Architecture
Date:	13.01.2005
Short Description:	Component diagram appearance of BSW module diagrams
Type:	new
Importance:	high
Description:	Diagrams placed below the BSW module package shall apply the following changes to the appearance options compared to BSW UMLGuide 00038:  - Hide attributes - No  - Hide operations - No  - Show constraints - yes  - Show Tags - yes
Rationale:	Visualizing all attributes, operations and constraints of a BSW module component.

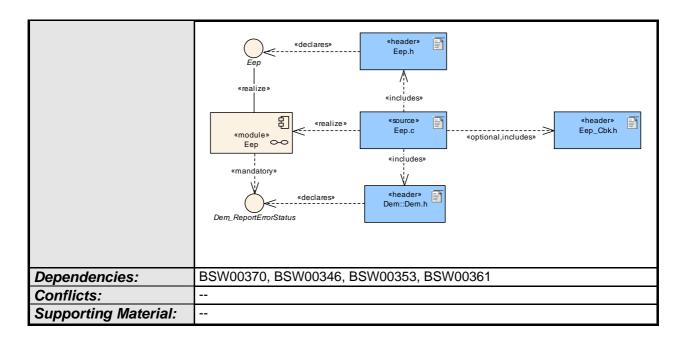

## 4.2.5 [BSW\_UMLGuide\_00004] Header File Modeling

Initiator:	WP Architecture
Date:	03.09.2009
Short Description:	Header File Modeling
Туре:	Changed
Importance:	High
Description:	Each file of a basic software module being of external relevance shall be modeled as an own public document artifact (see Toolbox>Component). The document artifacts shall be declared as either header or source file using the stereotypes "header" and "source".  Document artifacts can include other artifacts using a dependency with stereotype "include". With the additional stereotype "optional", optional inclusion can be expressed.  Document artifacts with stereotype "header" can relate to interfaces, using a dependency with stereotype "declares", artifacts with stereotype "source" can relate to modules, using a dependency with stereotype "realize". The following consistency constraints apply:  A source file realizing a module shall include header files declaring all interfaces that are realized and required by the module.
Rationale:	Enabling the showing of "include" relationships between source and header files.
Use Case:	Modeling of Eep header file inclusion

# 4.2.6 [BSW\_UMLGuide\_00005] Basic Software Module Modeling

Initiator:	WP Architecture
Date:	27.04.2007
Short Description:	Basic Software Module Modeling
Type:	new
Importance:	high
Description:	Each basic software module source code file(s) shall be modeled as an UML package containing one component with stereotype "module" (the "BSW Module Component") and the appropriate interfaces (the "BSW Module Interfaces"). The name of the package and component shall be the Prefix of the basic software module (specified within the basic software list).
Rationale:	Restriction of different modeling techniques.
Use Case:	Modeling of ECU State Manager. Name of this component: EcuM
Dependencies:	
Conflicts:	
Supporting Material:	

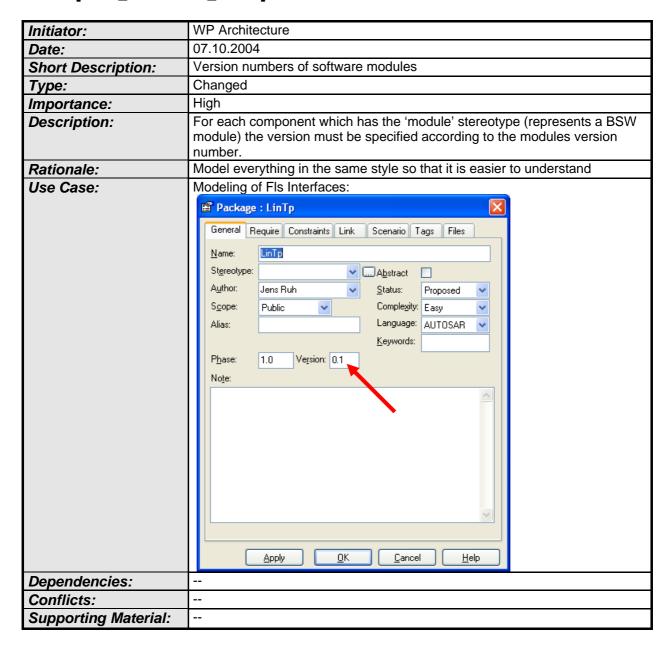

# 4.2.7 [BSW\_UMLGuide\_00010] Component Definition

Initiator:	WP Architecture
Date:	08.10.2004
Short Description:	Component Definition
Type:	new
Importance:	high
Description:	Each "BSW Module Component" in the cluster diagram shall be marked as "Composite Element".
Rationale:	Easier navigation within the model
Use Case:	Look into the details of one specific component.

Dependencies:	
Conflicts:	
Supporting Material:	

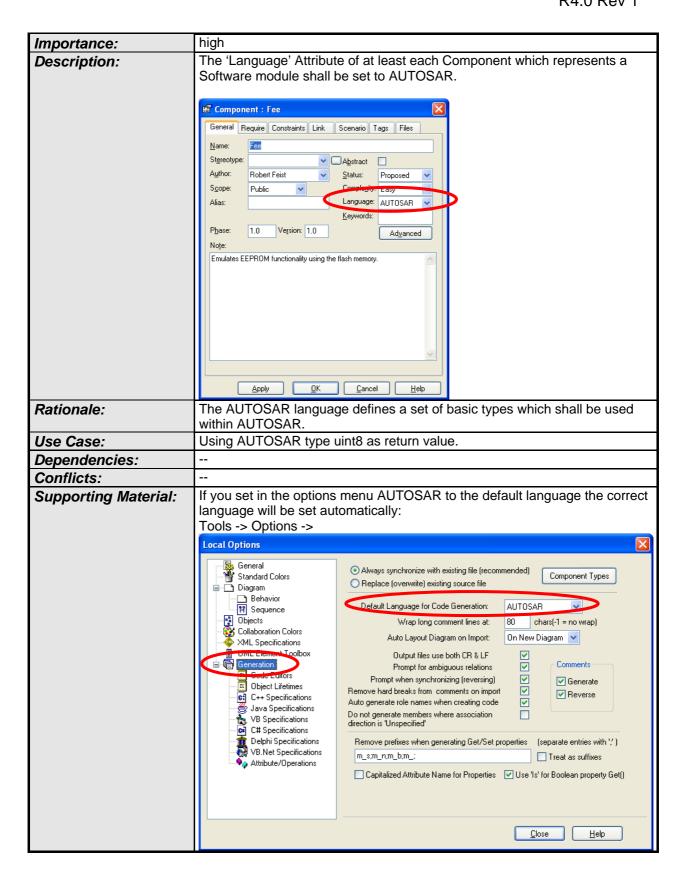

## 4.2.8 [BSW\_UMLGuide\_00009] Version numbers of software modules

### 4.2.9 [BSW\_UMLGuide\_00025] 'Language' definition of Components

Initiator:	WP Architecture
Date:	26.11.2004
Short Description:	'Language' definition of Components
Type:	Changed (supporting material added)

### 4.2.10 [BSW\_UMLGuide\_00052] Interface creation

Date:07Short Description:Integration:Type:neImportance:high	gh	
Short Description: Int Type: ne Importance: high	erface creation w gh	
Type: ne Importance: high	w gh	
Importance: high	gh	
	erraces shall only be created to diagram.  olbox  nalysis se Case tructure omposite ommunication ming tate ctivity omponent  Package Component Charact Austract Assembly Delegate Associate Realize Dependency Trace eployment ustom rofile  ere are two ways in EA to created  colloids  considered  considered	by dragging "Interface" from the toolbox into
Rationale:	ere are two ways in EA to crea	ate an interface class:
(b) wi	Directly drag a new interface ndow).  In the project view class and all operations are en	nforced to be abstract
	odeling of the complete commu	
Dependencies:	•	
Conflicts:		
Supporting Material:		
Supporting Material.		

# 4.2.11 [BSW\_UMLGuide\_00006] Interface Modeling

Initiator:	WP Architecture
Date:	07.10.2004
Short Description:	Interface Modeling
Туре:	new
Importance:	high
Description:	Each external interface class shall be modeled in "circle notation" within the "component diagram" of a package containing the basic software module components and/or classes.  Interfaces are the containers for subsequent API elements, they can contain type definitions and functions. See according sections for descriptions, how to model elements of interfaces.
Rationale:	Restriction of different modeling techniques.
Use Case:	Modeling of ECU State manager.
Dependencies:	Type definitions: BSW_UMLGuide_00026, BSW_UMLGuide_00027, BSW_UMLGuide_00028, [BSW_UMLGuide_00059 Function definitions: BSW_UMLGuide_00062, BSW_UMLGuide_00063
Conflicts:	
Supporting Material:	

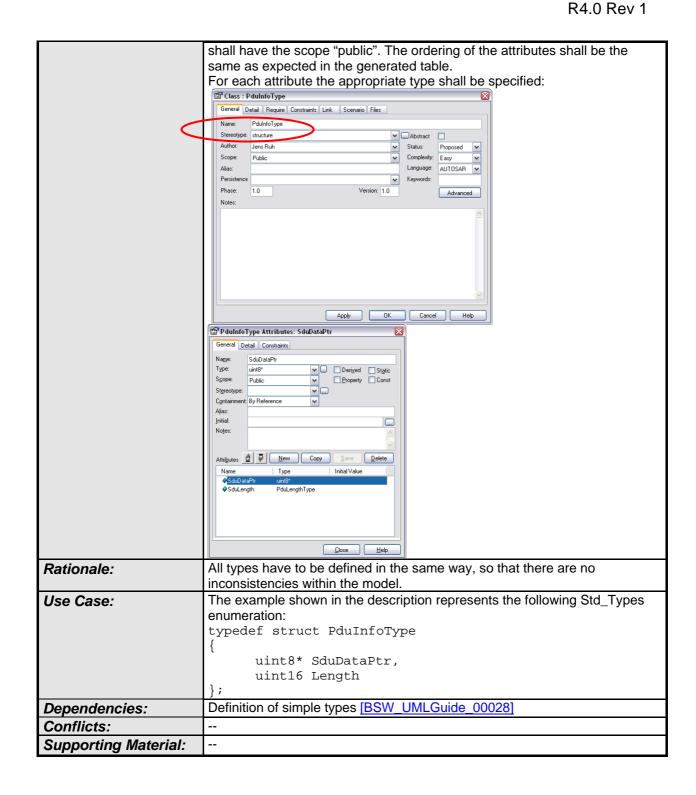

# 4.2.12 [BSW\_UMLGuide\_00011] Accessing interfaces of other components

Initiator:	WP Architecture
Date:	27.04.2007
Short Description:	Accessing interfaces of other components
Type:	Changed
Importance:	high
Description:	If a basic software module requires the access of another module this relation shall be modeled as a "mandatory" dependency between the component of the basic software module requiring the access and the appropriate Interface class of the other basic software module.  If the interface to be accessed is not in the same package a link to the interface shall be copied into the appropriate diagram. The link shall be modeled in circle notation.
Rationale:	Restriction of modeling techniques
Use Case:	Eep Interface "uses" interface of Eep driver.
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.2.13 [BSW\_UMLGuide\_00027] Definition of structures

Initiator:	WP Architecture
Date:	27.04.2007
Short Description:	Definition of structures
Type:	
Importance:	high
Description:	Each type definition which represents a structure declaration shall be modeled as a class with the stereotype 'structure'.  All possible entries shall be defined as attributes of that class. The attributes

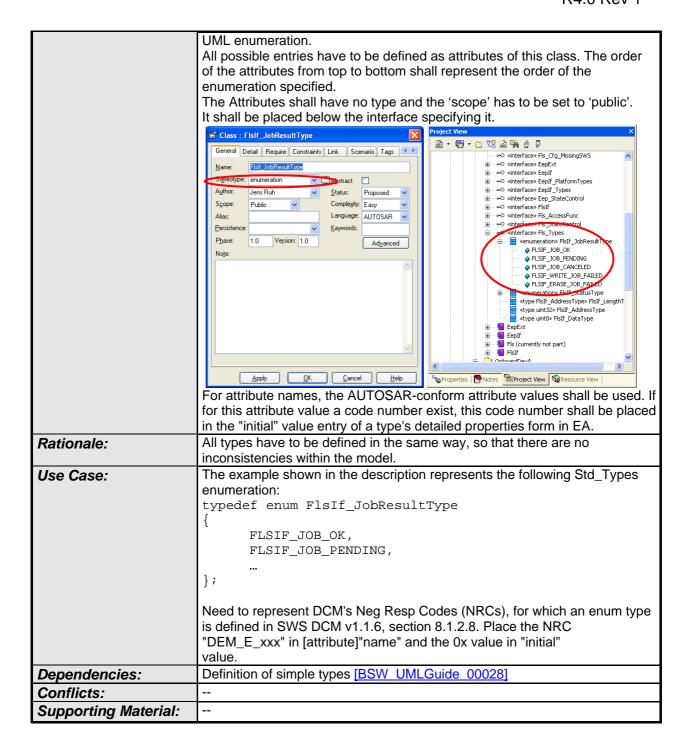

### 4.2.14 [BSW\_UMLGuide\_00026] Definition of enumerations

Initiator:	WP Architecture
Date:	26.11.2004
Short Description:	Definition of enumerations
Type:	Changed
Importance:	high
Description:	Each type definition representing an enumeration shall be modeled as a n

#### 4.2.15 [BSW UMLGuide 00028] Definition of simple types

Initiator:	WP Architecture
Date:	27.04.2007
Short Description:	Definition of simple types
Type:	
Importance:	high
Description:	Each type definition shall be modeled as a separate class with stereotype 'type'. If the type has a hardware and configuration independent type (e.g.

	'unit8'), the tagged value 'range' has to specify the range as text.
Rationale:	All types have to be defined in the same way, so that there are no inconsistencies within the model.
Use Case:	
Dependencies:	Definition of structures [BSW_UMLGuide_00027], Definition of enumerations [BSW_UMLGuide_00026]
Conflicts:	
Supporting Material:	

# 4.2.16 [BSW\_UMLGuide\_00059] Definition of typedefs

Initiator:	Technical Office
Date:	27.04.2007
Short Description:	Definition of typedefs
Type:	
Importance:	high
Description:	Each type definition shall be modeled as a separate class with stereotype 'typedef'.
	If the typedef is independent from the configuration, the typedef must be a specialization of the type it is referring to.
	If the typedef can refer to different types depending on the configuration, the typedef must be a specialization of those types.
Rationale:	The documentation generator has extract information regarding the typedefs from the UML model.
Use Case:	
Dependencies:	Definition of structures [BSW_UMLGuide_00028], Definition of enumerations [BSW_UMLGuide_00026]
Conflicts:	
Supporting Material:	

# 4.2.17 [BSW\_UMLGuide\_00066] Definition of ranges for typedefs

Initiator:	Technical Office
Date:	23.07.2007
Short Description:	Definition of ranges for typedefs
Type:	
Importance:	high
Description:	If a typedef (class with stereotype < <typedef>&gt;) has a restricted set of ranges, an attribute with stereotype &lt;<range>&gt; has to be created for each such range. The name of the attribute specifies the range label and the notes field describes the range.</range></typedef>
Rationale:	The documentation generator has to extract information regarding the range of typedefs from the UML model.
Use Case:	See «typedef» Fim_FunctionIdType.
Dependencies:	Definition of structures [BSW_UMLGuide_00028]
Conflicts:	
Supporting Material:	

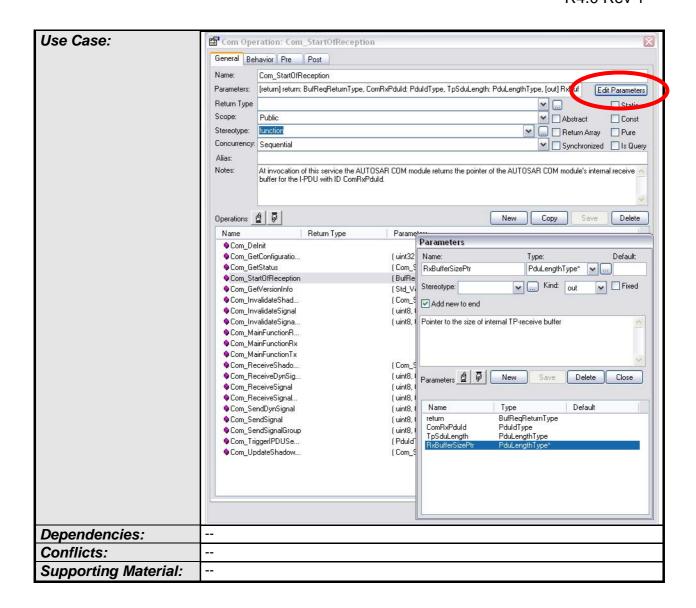

# 4.2.18 [BSW\_UMLGuide\_00062] Definition of functions and callbacks

Initiator:	Technical Office
Date:	27.04.2007
Short Description:	Definition of functions
Туре:	
Importance:	high
Description:	Each BSW function must be represented by an operation with stereotype 'function'.  Each BSW callback must be represented by an operation with stereotype 'callback'.  The following tagged values must be specified:  ServiceID: numeric id of the function  Synchronous: must be set to 'true' if this function is synchronous, must be set to 'false' otherwise  Reentrancy: description of the reentrancy for this function. Should be set to "Reentrant" for reentrant functions. Should be set to "Non-Reentrant" for non-reentrant functions.
Rationale:	The documentation generator needs this information to generate the function tables.
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.2.19 [BSW\_UMLGuide\_00068] Definition of parameters

Initiator:	WP Virtual Functional Bus
Date:	09.07.2009
Short Description:	Definition of parameters
Type:	New
Importance:	High
Description:	Parameters of functions are defined, by going to the "Edit Parameters" dialog and adding the parameters with the "New" button.  All parameters must have a name and a type. Type names in braces (e.g. " <type>") are considered to be generic. A C ellipse can be used by typing a blank as name and "…" as type. It is as well considered a generic type. Parameters shall not have stereotypes. All parameters must have a kind indicating the direction of the information flow. The order of the parameters in the list is relevant.</type>
Rationale:	Harmonization of modeling techniques.

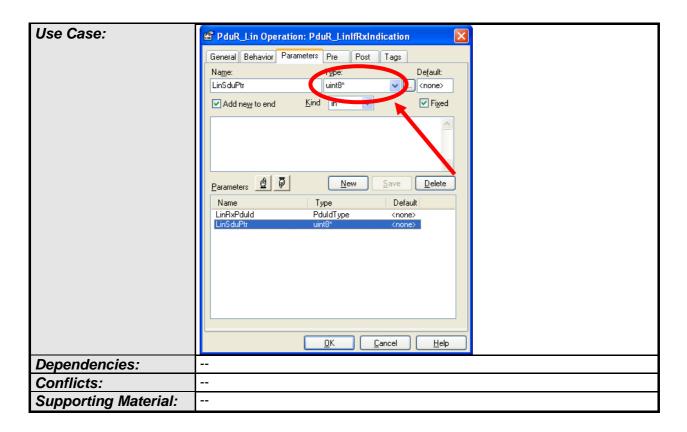

## 4.2.20 [BSW\_UMLGuide\_00037] Definition of pointer types

Initiator:	WP Architecture
Date:	13.01.2005
Short Description:	Definition of pointer types
Type:	new
Importance:	high
Description:	If a parameter or a return value of a module interface represents a pointer the asterix(es) shall be placed directly after the original type.
Rationale:	Readability of the module (specific views will otherwise filter out that information). Harmonization of modeling techniques.

## 4.2.21 [BSW\_UMLGuide\_00055] Use of parameter kind

Initiator:	Technical Office
Date:	27.04.2007
Short Description:	Use of parameter kind
Type:	New
Importance:	High
Description:	The drop down list for the 'kind' of function parameters should be set to the appropriate value (in, out, in/out, return). In the case that EA adds a "*" to the parameter type (for 'out') although it is already a pointer (by a typedef), this should be annotated in the field 'notes' of the respective function. Note that all out and inout parameters must be pointer types.
Rationale:	Use the in/out feature and work around the EA bug.
Use Case:	Modeling of the com stack types
Dependencies:	[BSW_UMLGuide_00037] Definition of pointer types
Conflicts:	
Supporting Material:	

# 4.2.22 [BSW\_UMLGuide\_00061] Definition of return type

Initiator:	Technical Office
Date:	27.04.2007
Short Description:	Definition of return type
Type:	New
Importance:	High

Description:	The return type of a function must not be specified. Instead a parameter with kind 'return' must be used.
Rationale:	Return parameters must be documented. This is not possible when just the return type is specified.
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

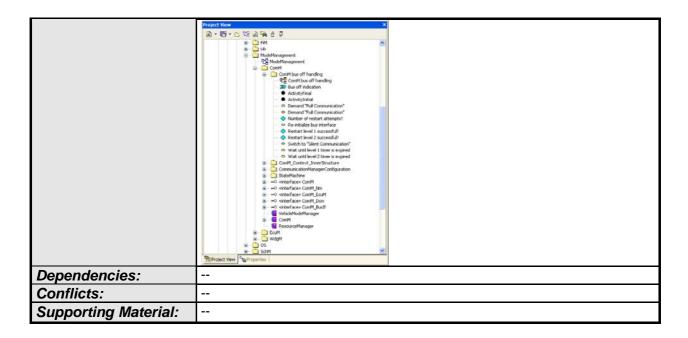

# 4.2.23 [BSW\_UMLGuide\_00063] Definition of scheduled functions

Initiator:	Technical Office
Date:	27.04.2007
Short Description:	Definition of functions
Туре:	
Importance:	High
Description:	Each BSW scheduled function must be represented by an operation with stereotype 'scheduled function'. In addition to the tagged values for functions, the following tagged values must be specified:  • schedule: Must be set to one of the following values  • FIXED_CYCLIC  • ON_PRE_CONDITION  • VARIABLE_CYCLIC  • VARIABLE_CYCLIC_OR_ON_PRE_CONDITION
Rationale:	The documentation generator needs this information to generate the function tables.
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.2.24 [BSW\_UMLGuide\_00035] Sub elements of BSW modules

Initiator:	WP Architecture
Date:	13.01.2005
Short Description:	Sub elements of BSW modules
Type:	Changed
Importance:	high
Description:	The internal behaviour of BSW modules may be modeled in two ways: (1) A package may be added to the package representing the BSW module or (2) elements can be placed below the BSW module component. In case of optional functionality or scaled functionality the respective dependency in the respective diagram shall be commented by selecting 'Attach Note or Constraint'.
Rationale:	The Sub elements of a component could be of type: - separation of concerns / grouping of functionality - optionally / scalability
Use Case:	Refinement of ComM.

# 4.3 Behavioral Design

### 4.3.1 General

## 4.3.1.1 [BSW\_UMLGuide\_00030] Usage of Sequence Diagrams

Initiator:	WP Architecture
Date:	13.01.2005
Short Description:	Usage of Sequence Diagrams
Type:	new
Importance:	high
Description:	Only sequence diagrams shall be used for modeling interactions of different
	modules.
Rationale:	Restriction of different modeling techniques.
Use Case:	Modeling of the sequences of API calls during a LIN frame transmission.
Dependencies:	BSW_UMLGuide_00007
Conflicts:	
Supporting Material:	

## 4.3.1.2 [BSW\_UMLGuide\_00031] Usage of State Machine Diagrams

Initiator:	WP Architecture
Date:	13.01.2005
Short Description:	Usage of State Machine Diagrams
Type:	new
Importance:	high
Description:	Only state machine diagrams shall be used for modeling state dependencies within and in between elements.
	within and in between elements.

Rationale:	Restriction of different modeling techniques.
Use Case:	Modeling of ECU Manager state changes.
Dependencies:	BSW_UMLGuide_00007
Conflicts:	
Supporting Material:	

# 4.3.2 Sequence Diagrams

# 4.3.2.1 [BSW\_UMLGuide\_00012] Location of Sequence Diagrams

Initiator:	WP Architecture
Date:	13.01.2005
Short Description:	Location of Sequence Diagrams
Type:	Renamed
Importance:	High
Description:	All sequence diagrams have to be placed within the "Interaction View Package"
Rationale:	Definition of similar model structures
Use Case:	Modeling of the AUTOSAR COM stack
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.3.2.2 [BSW\_UMLGuide\_00020] Packages to contain sequence diagrams

Initiator:	WP Architecture
Date:	25.01.2005
Short Description:	Packages to contain sequence diagrams
Type:	Changed
Importance:	High
Description:	A new sequence diagram shall be put into an appropriate package. If no such package is available, it shall be requested from the technical office: technical.office@autosar.org.
Rationale:	Guarantee of readability and correct placement of the sequence tree.
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

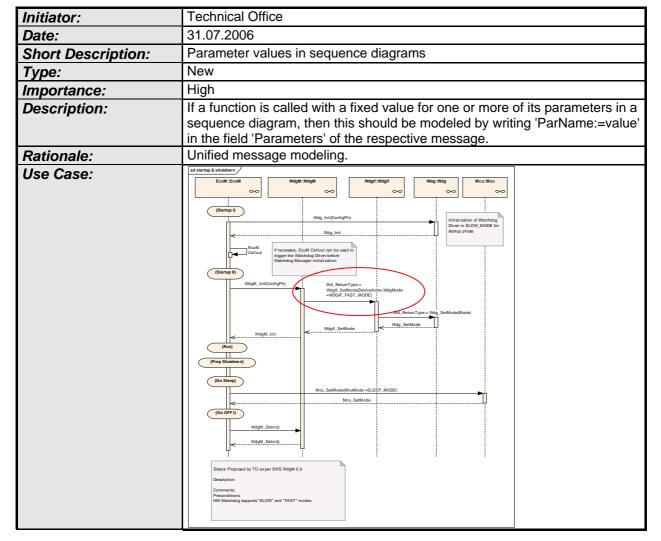

# 4.3.2.3 [BSW\_UMLGuide\_00021] Commenting of Sequence Diagrams

Initiator:	WP Architecture
Date:	19.10.2004
Short Description:	Commenting of Sequence Diagrams
Type:	New
Importance:	High

Description:	Each Sequence diagram shall have a comment placed as 'note' within the diagram that contains the following items:  • Status (open – proposed – approved – conflict – rejected)  • Description  • Comment  If a sequence diagram is rejected or on conflict, the reason shall be described within the comment.
Rationale:	Give other people the chance to understand.  Traceability
Use Case:	Status: approved  Description: A CAN frame is received and indicated to the upper layer in interrupt context.  Comment: -none-
Dependencies:	
Conflicts:	
Supporting Material:	

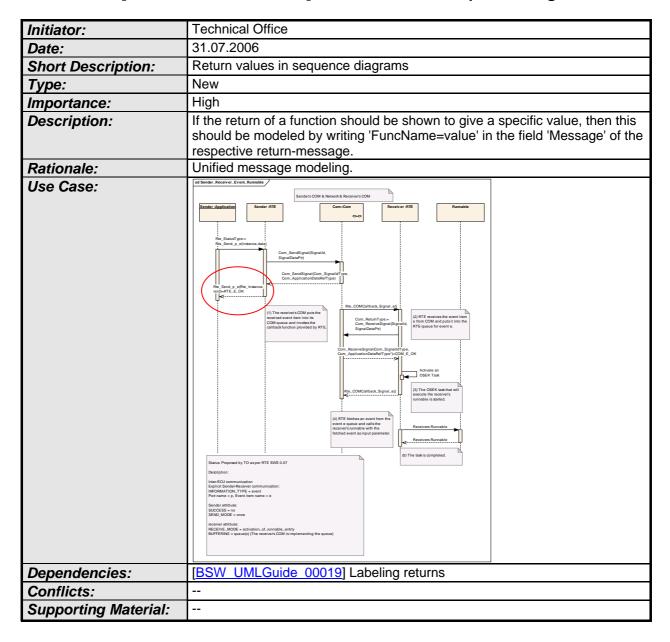

# 4.3.3 [BSW\_UMLGuide\_00057] Parameter values in sequence diagrams

Dependencies:	[BSW_UMLGuide_00019] Labeling returns
Conflicts:	
Supporting Material:	

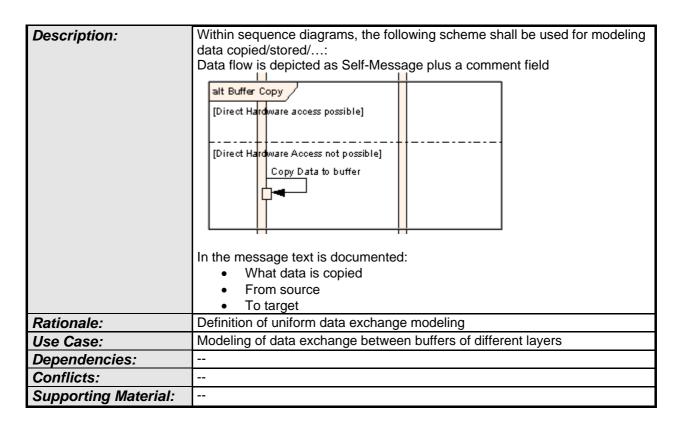

## 4.3.3.1 [BSW\_UMLGuide\_00058] Return values in sequence diagrams

### 4.3.3.2 [BSW\_UMLGuide\_00018] Modeling of data copying

Initiator:	WP Architecture
Date:	18.10.2004
Short Description:	Modeling of data copying
Type:	new
Importance:	high

### 4.3.3.3 [BSW\_UMLGuide\_00019] Labeling returns

Initiator:	WP Architecture
Date:	07.10.2004
Short Description:	Labeling returns
Type:	Changed
Importance:	High
Description:	Returns shall be labeled. The label shall be the name of the function it belongs to without parameter names or -types. Returns shall be marked as "Is Return".  It is announced that in future return labels can be automatically be selected within the Enterprise architect. If this is possible no hand-made adaptations shall be done after selection.
Rationale:	Allow easy identification to which function a return belongs
Use Case:	A UML message has the name "Transmit CAN PDU".  The return message has the same name.  Sd NvM_GetDataIndex  Generic Elements::NvM User  NvM::NvM  NvM::NvM
Dependencies:	

Conflicts:	
Supporting Material:	

# 4.3.3.4 [BSW\_UMLGuide\_00036] Linking sequence diagrams

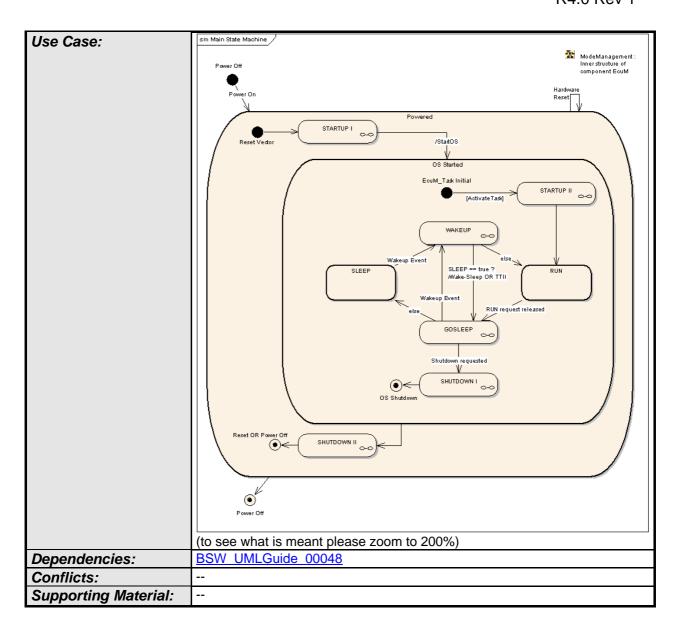

Initiator:	WP Architecture
Date:	13.01.2005
Short Description:	Linking sequence diagrams
Type:	new
Importance:	high
Description:	Each package within the 'Interaction Views' package shall contain dedicated diagrams containing descriptions and links to sub diagrams.  These diagrams will be generated by the model owner. The author of a sequence diagram shall therefore provide a short description of contents of generated packages and diagrams to the model owner.
Rationale:	Readability of overall module
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.3.4 State Machine Diagrams

# 4.3.4.1 [BSW\_UMLGuide\_00041] States shall have thick lines

Initiator:	WP Mode Management
Date:	14.02.2005
Short Description:	States shall have thick lines
Type:	new
Importance:	high
Description:	The state boxes shall have an outline of 2 points
Rationale:	Allow easier distinction between states and activities

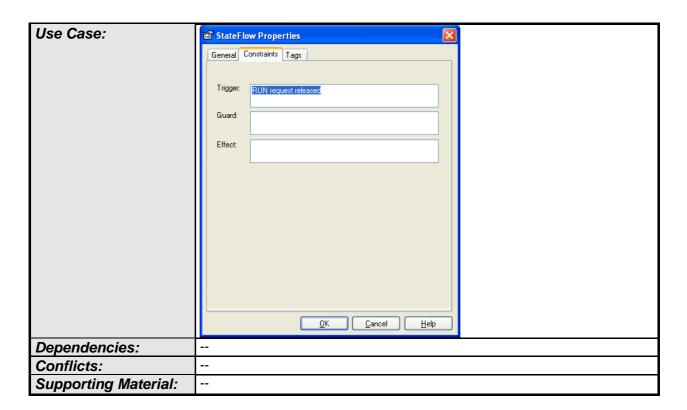

# 4.3.4.2 [BSW\_UMLGuide\_00042] A trigger condition shall be defined for each transition

Initiator:	WP Mode Management
Date:	14.02.2005
Short Description:	A trigger condition shall be defined for each transition
Туре:	Changed
Importance:	High
Description:	In each transition between two states the trigger of the transition (the condition to make a transition) shall be defined in the 'Trigger' field of the 'State Flow Properties'.
Rationale:	Necessary for complete behavioral description

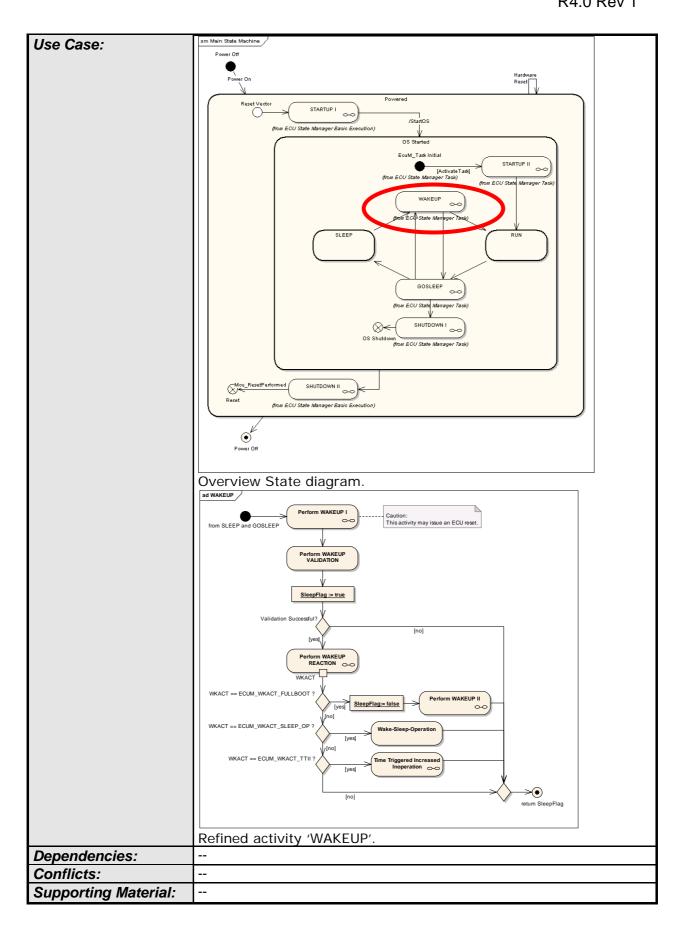

# 4.3.4.3 [BSW\_UMLGuide\_00043] Transitions may be modeled with subactivities

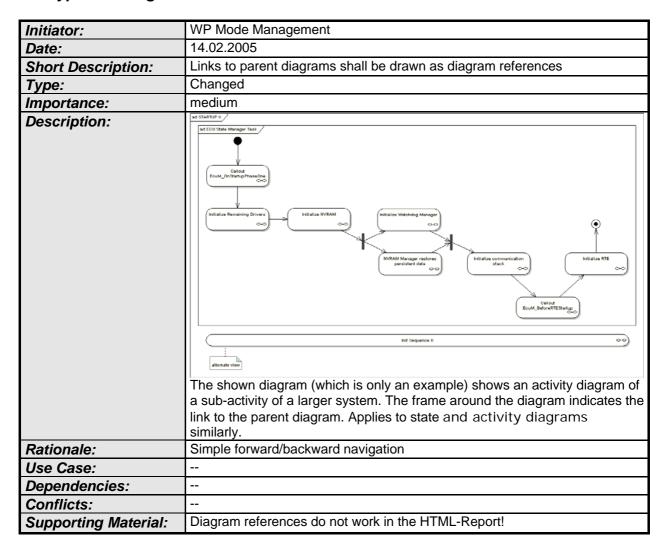

Initiator:	WP Mode Management
Date:	14.02.2005
Short Description:	Transitions may be modeled with sub-activities
Type:	Changed
Importance:	High
Description:	To reduce complexity of diagrams Activities may be modeled in a hierarchical way by using sub-activities.
Rationale:	In some cases complex activities could trigger a transition. In these cases the diagrams become rather complex. These sub-activities may be visualized as sub activities to reduce complexity in one diagram.

# 4.3.4.4 [BSW\_UMLGuide\_00046] Links to parent diagrams shall be drawn as hyperlink diagram references

### 4.3.5 Activity Diagrams

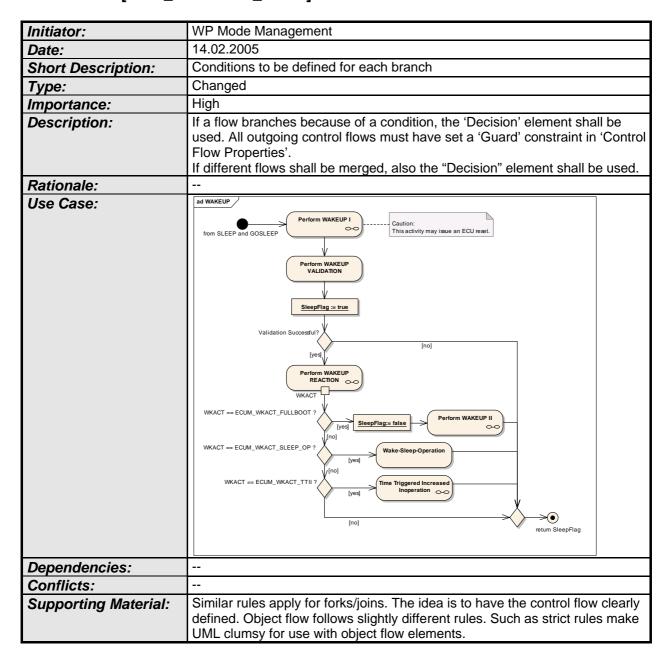

#### 4.3.5.1 [BSW UMLGuide 00048] Activities shall have thin lines

Initiator:	WP Mode Management
Date:	14.02.2005
Short Description:	Activities shall have thin lines
Type:	new
Importance:	high
Description:	The activity boxes shall have an outline of 1 point
Rationale:	Allow easier distinction between states and activities
Use Case:	
Dependencies:	BSW_UMLGuide_00041
Conflicts:	

Supporting Material:	

#### 4.3.5.2 [BSW UMLGuide 00049] Conditions to be defined for each branch

# 4.3.5.3 [BSW\_UMLGuide\_00050] Activities to be re-used in sequence diagrams should also be drawn as sequence diagrams

Initiator:	WP Mode Management
Date:	14.02.2005
Short Description:	Activities to be re-used in sequence diagrams must also be drawn as sequence diagrams
Туре:	new

Importance:	medium
Description:	If an activity is to be referenced within a sequence diagram the drawing messages will not look nice. Therefore this type of activities should also be modeled as sequence diagrams.
Rationale:	Nice modeling.
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.4 Model synchronization

All guidelines related to the design master are not intended for 'normal' users, because the master of the BSW UML model will not be distributed. This chapter will be refined as soon as the process of collaborative work on the BSW UML model has been agreed.

### 4.4.1 [BSW\_UMLGuide\_00013] Creating a Design Master

Initiator:	WP Architecture
Date:	14.10.2004
Short Description:	Creating a Design Master
Type:	Changed
Importance:	High
Description:	Convert the base project to a Design Master using the Make Design Master option in the Tools (Manage .EAP File submenu.
Rationale:	
Use Case:	This shall be done once for the project by AUTOSAR Technical Office only (already done – no more actions required).
Dependencies:	
Conflicts:	
Supporting Material:	

### 4.4.2 [BSW\_UMLGuide\_00023] Design Master naming convention

Initiator:	WP Architecture
Date:	14.10.2004
Short Description:	Design Master naming convention
Type:	New
Importance:	High
Description:	The file name of the Design Master shall have the following naming: Master_AR_BasicSWArchitecture.eap and to be managed by a version management tool.
Rationale:	
Use Case:	
Dependencies:	

Conflicts:	
Supporting Material:	

# 4.4.3 [BSW\_UMLGuide\_00014] Creating replicas from the Design Master

Initiator:	WP Architecture
Date:	14.10.2004
Short Description:	Creating replicas from the Design Master
Туре:	new
Importance:	high
Description:	Create replicas from the design master using the Create New Replica option in the Tools (Manage .EAP File submenu. Further work must be done on the replica.
Rationale:	
Use Case:	To create your own local working model. This has to be done only once.
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.4.4 [BSW\_UMLGuide\_00022] Replica naming convention

Initiator:	WP Architecture
Date:	14.10.2004
Short Description:	Replica naming convention
Type:	new
Importance:	high
Description:	Replicas of the design master shall have the following naming convention:  Replica_AR_BasicSWArchitecture_ <version number="">_<author name="" short="">.eap</author></version>
Rationale:	
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	

# 4.5 Documentation generation

# 4.5.1 [BSW\_UMLGuide\_00067] Providing an alternative name for generated tables

Initiator:	ТО
Date:	05.09.2007
Short Description:	Providing an alternative name for generated tables
Type:	new

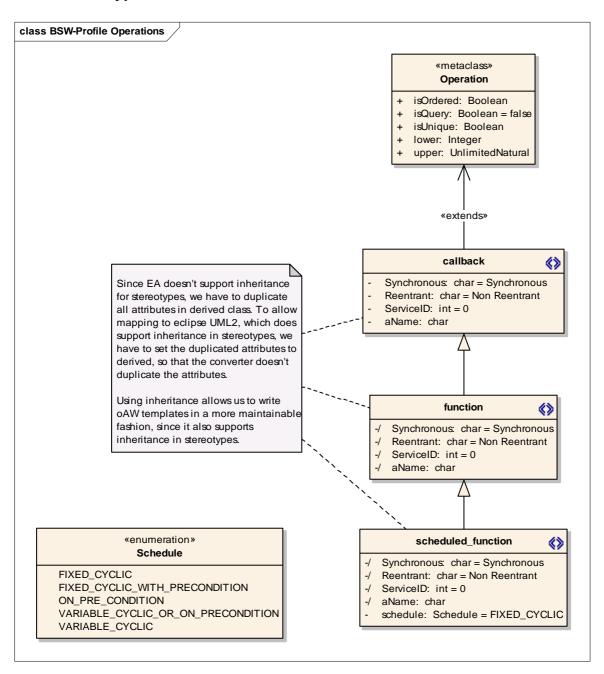

Importance:	high
Description:	The documentation generator for the API tables uses the element name as table name for the inclusion in the SWS Word document. This name has a limited length in Word, which some elements in the BSW UML model exceed. An alternative shorter name can be added by editing the tagged value "aName".
Rationale:	Limitation on the length of anchors in Word.
Use Case:	
Dependencies:	
Conflicts:	
Supporting Material:	AUTOSAR_SWS_DiagnosticEventManager

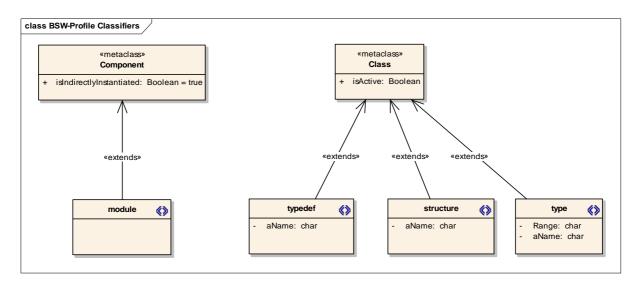

## 5 BSW UML Profile

### 5.1.1 Stereotypes callback, function and scheduled function

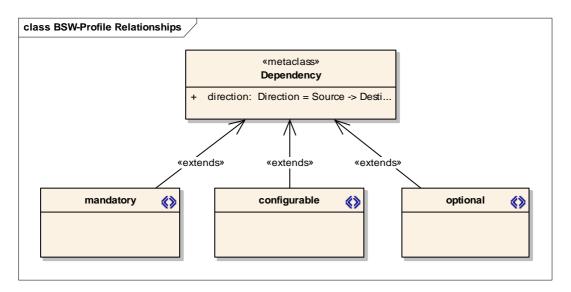

## 5.1.2 Stereotypes module, type, typedef and structure

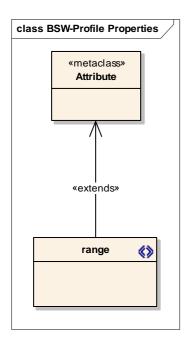

# 5.1.3 Stereotypes mandatory, configurable and optional

# 5.1.4 Stereotype range

# 6 Administrative Info

Last used Requirements ID is [BSW\_UMLGuide\_00068]
